1 Known Anomalies

The following table describes all open known anomalies for NUMI Release Increment 6 as of May 17, 2013.

Table 1 - Open Known Anomalies

Ticket #	Summary	Priority	Previous Status	Current Status	Mitigation Strategy
1201	Start/End Dates on Patient Selection page need validation to prevent incorrect dates from being entered	N/A	Current behavior: displays "No Records Found" if invalid dates are entered. Date Selection Filter allows a later date to be selected in the start date greater than end date, in other words, a negative date range	Anomaly found in 13.1 and 13.2, still present in 14.0 Current behavior: displays "No Records Found" if invalid dates are entered.	Users are trained to enter valid dates in date fields. This issue will be addressed in a future release, as determined by priority and schedule.
TFS #24554	Dismissed Patients Stays Results should be displayed in a table in the lower part of the screen for Stays within the last 6 months	N/A	6 month date range not preset on Dismissed Patient Screen	Anomaly found in 13.1 and 13.2, still present in 14.0	Users are trained to enter a valid date range rather than use the default date range
	The "Admission Review Type" dropdown does not have Observation reviews selected by default for observation reviews. If the admission review type is not explicitly chosen, observation reviews will be re-categorized causing the review to not appear as an observation upon a search.	N/A	Observation reviews were not possible in previous versions	Anomaly found in 14.0	Users are trained to select Observation as an Admission review type for Observation stays
Performance Testing, Defect #43	On the Manual Sync page, Using "Find by Patient Name", searching for a patient returns other patients	N/A	MDWS problem, anomaly found in 13.1 and 13.2, still present in 14.0	Anomaly found in 14.0, interfacing with MDWS 1.2 or MDWS 2.7.3.2	MDWS interface to VistA appends a wildcard to search text. Users are trained to ignore extraneous results
TFS #67999	Free Text search in Utilization Review and other pages works erratically	N/A	Sometimes observed in 13.2	Found and replicated in 14.0	To be addressed in a patch, time permitting

Ticket #	Summary	Priority	Previous Status	Current Status	Mitigation Strategy
TFS #68000	Discharge dates not always coming across from MDWS on midnight sync	N/A	Existing In 13.2, 13.1, and probably earlier versions	Continues to exist in 14.0	Via configuration and code, MDWS has been given additional time to complete. When failures occur, manual syncs can usually pull across the data, as can visiting individual patients.
TBD	After logging in to NUMI, and then exiting by closing the browser (rather than logging out) users can sometimes re-enter NUMI by launching the NUMI URL without logging in. So far this has only been replicated when another browser window is up simultaneously.	N/A	Testing has not identified this problem as occurring in 13.2.	Exists in 14.0.	To be repaired in a future version, as priority warrants.
TBD	NUMI screens have "powered by Medora" and "A product of the VA Ann Arbor Healthcare Center...." at the bottom.	N/A	Existed in previous versions.	Exists in 14.0.	To be repaired in a future version, as priority warrants.
TBD	For reviews meeting and not meeting criteria, admission reviews, continued stays reviews, and various other scenarios, there is an error if no clinical findings are selected. This is present on NUMI version 1.1.14.0 using both CERMe 2012.2 and 2013.	N/A	Testing has not identified this problem as occurring in 13.2 using CERMe 2011.	Anomaly found in 14.0 using both CERMe 2012 & CERMe 2013. This was found to only be true if a BH subset was selected.	Could be repaired in a future version, as priority warrants.
