Table of Contents

1.   Introduction

The Business Owner requested that Domain file updates are automated via a post-install routine.

2.   Purpose

This release notes cover the new features provided by patch, XM*DBA*181.

3.   This Release

The following sections provide, in brief, the new features and functions added by patch, XM*DBA*181. This informational patch, XM*DBA*181, informs sites that a new package, 'MailMan Domain Updates' (XMDB), has been created for future MailMan domain releases.

4.   Features and Functionality

This new package was created to allow for automatic installation of MailMan domains by allowing Health Product Support developers to utilize a post-install routine to add the new domains to the Domain (#4.2) file. This will replace the XM*DBA*# convention previously used to manually add new domains to the file via FileMan Enter/Edit.
