Introduction

The DHCP Fee Basis package provides a range of software supporting the Department of Veterans Affairs fee for service (Fee Basis) program. A veteran is authorized Fee Basis care if s/he is legally eligible for such care and VA facilities are not feasibly available to meet the patient's medical needs. The authorization may be for short term care, ID card status for ongoing outpatient care, home nursing services which authorize home nursing visits, community nursing home, or contract hospital. Veterans authorized Fee Basis care may receive reimbursement for their travel expenses from their home to the fee provider and/or prescription services in emergent situations.

The Fee Basis package interfaces with the ADT (Admission-Discharge-Transfer) DHCP module of the PIMS (MAS) package to provide users access to registration data entered through ADT options. It integrates with VA FileMan to give non-programmer personnel the ability to extract reports with ease. It interacts with the IFCAP package in the passing of data for posting to 1358s. It integrates with the Integrated Billing (IB) package for patient insurance data. It allows users to enter and track unauthorized claims for all Fee Basis programs. Use of the Fee Basis software provides for more efficient and accurate operation of the Fee Basis programs with reduction of paperwork, savings in man-hours, and minimization of error.

Related manuals include the Fee Basis User Manual, which describes the functionality and use of the software; the Fee Basis Installation Guide, which provides step-by-step instructions for installing the software, the Fee Basis Guidebook supplied by Central Office, and the Fee Basis Package Security Guide.

The Fee Basis software provides menus for the four fee for service programs: Medical Fee, Pharmacy Fee, Community Nursing Home, and Civil Hospital. There are also menus for processing unauthorized claims and answering telephone inquiries regarding payments.

Some of the options in the Medical Fee Main Menu are utilized to:

- Authorize Fee Basis treatment
- Enter vendors or payments
- Create, close out, and release batches of invoices
- Record travel payments
- Establish site parameters
- Queue Fee Basis batch data for transmission to Austin, TX

The Pharmacy Fee section of the Fee Basis package provides the means to administer the Hometown Pharmacy program which provides payment for medications furnished to eligible veterans on an emergency basis.

The Community Nursing Home section provides the means to pay for nursing home care provided to VA inpatients who are placed in nursing homes in the community for an authorized period of time at VA expense.

The Civil Hospital section provides the ability to pay for care provided to veterans who are determined to be legally and medically eligible for care and who are admitted to a private hospital in emergency situations where VA facilities are not feasibly available.

The Unauthorized Claims section provides the means to process unauthorized claims which are expenses for inpatient medical services obtained by eligible veterans without prior authorization from the VA.

The Telephone Inquiry Menu contains the options that are used to answer inquiries from vendors and/or veterans regarding payments or checks.

Non-Menu Diagram Exported Options

The following options do not appear on the menu but are exported with the package.

- FBAA MRA PURGE AUTO
  This option is taskable and will purge transmitted MRAs. It should be used <u>only</u> when you are sure Austin has received your MRA transmissions, since use of this option will prevent retransmission of MRAs. Upon successful completion of the purge, a mail message will be sent to a mail group confirming the purge specifics. Remember to add a mail group to the FBAA PURGE TRANSMITTED MRA'S bulletin.

- FBAA MRA SERVER
  This server processes all incoming MRA messages received from Austin through MailMan.

- FBAA PAID SERVER
  This server processes incoming payment information sent from FMS. The job will run in the background and will send a bulletin to the FEE mail group upon completion. The bulletin will detail the number of vendors found for each action type taken. FB*3.5*121 the message length from Central Fee is changing to 138 characters. The FBPAID and FBPAID1 routines were modified to accept either length (existing 82 or new 138 character) messages. See Appendix B for the 138 character message format.

- FBUC QUEUE BATCH PRINT
  If your letters are not automatically printed, and you choose not to use the Batch Print Letters option in the Letters for Unauthorized Claim submenu, this option should be run at least once a day.

- FBUC ABANDONED
  This option is to be queued to run nightly. A device needs to be specified. It will search the FEE BASIS UNAUTHORIZED CLAIMS file (#162.7) for those claims that have the status of

INCOMPLETE UNAUTHORIZED CLAIM or APPEAL/ISSUED STATEMENT OF CASE. If the expiration date for these claims is met, the claim will be dispositioned to ABANDONED. A printout of those claims which were updated will print to the specified device.

Archiving and Purging

Archiving

There are currently no archiving capabilities within the Fee Basis package.

Purging

The Fee Basis package allows the user to purge transmitted delete type and reinstate type MRAs through the Purge Transmitted MRAs option under the Supervisor Main Menu of the Medical Fee Main Menu. A site may elect to run this purge manually through use of this option, or have the purge automatically run through a background task by setting up the FB MRA Purge Auto option through TaskMan. It will effectively purge the delete type and reinstate type MRAs automatically and forward a bulletin to the FEE mail group upon completion.

It should be noted that change type and add type MRAs will no longer be purged through use of these options. They will be cleaned up automatically upon confir-mation from Austin on each respective transaction.

Contained in Version 3.0 of Fee Basis is a purge routine called FBAABPG. This routine should only be used when batch numbers exceed 99000 and prior to the site reaching number 99999 as the next available batch number. This information is found in the FEE BASIS SITE PARAMETERS file (#161.4), Field #10.

A system backup should be completed prior to the execution of the purge routine. To initiate the purge, you will be prompted for a cutoff date. This date has to be in the past. All batches FINALIZED prior to this date and having no rejects pending will be purged from the FEE BASIS BATCH file (#161.7). All pointed to fields will be deleted as well as any cross-references which use the batch number. Below is a list of files which contain fields which could be affected by the purge.

FILE NUMBER	FILE NAME
162	FEE BASIS PAYMENT
162.1	FEE BASIS PHARMACY INVOICE
162.5	FEE BASIS INVOICE
163	FEE BASIS MEDICAL DENIALS
163.1	FEE BASIS PHARMACY DENIALS

After the purge is complete, the number of batches purged and the To Date will be displayed. Also shown is the FBAA BATCH PURGE bulletin triggered to any mail group entered in the BULLETIN file for this message.

Since there will be a number of sets and kills made to global nodes during this purge, it is important to consider JOURNAL media requirements.

This purge may take a considerable amount of time; therefore, it is recommended the routine be run during off-hours.

The FBAABPG routine will not free up a large amount of disk space.
With DUZ and DT set as well as DUZ(0)="@" in programmer mode, do the following.

External Relations

1. In order to run this package, your facility must be running a <u>minimum</u> of the following.

    VA File Manager V. 20.0
    NEW PERSON file (#200)
    Kernel V. 7.1
    Kernel Toolkit V. 7.2
    IFCAP V. 4.0
    Fee Basis V. 3.0 (if previously running Fee Basis)
    PIMS V. 5.3
    Integrated Billing V. 2.0
    CPT V. 5.0

The DHCP Fee Basis software product is fully integrated with Version 20.0 of VA FileMan and
Version 7.1 of the Kernel. Version 3.5 is also integrated with the 1358 module of IFCAP. When
outpatient batches are released for payment, there will be a posting to the appropriate 1358. For
inpatient batches, the estimated amount from the VA Form 10-7078, as well as the actual
amount, will be posted to the 1358 when batches are released for payment. The Fee Basis
package interfaces with the ADT (Admission-Discharge-Transfer) DHCP module of the PIMS
(MAS) package to provide users access to registration data entered through ADT options.
Integration with the PTF (Patient Treatment File) module of PIMS allows for the creation of
non-VA PTF records. Integration with CPT V. 5.0 allows for entry of modifiers for CPT codes.
The package also integrates with the Integrated Billing (IB) package for patient insurance data.

In order to make an entry in the NEW PERSON file (#200), the user must hold the XUSPF200
security key.

Internal Relations

Any Fee Basis option in File #19 should be able to run independently provided the user has the appropriate keys.

Package-wide Variables

All variables associated with the Fee Basis package are of equal importance. There are no package-wide variables associated with this package.

How to Generate On-Line Documentation

This section describes some of the various methods by which users may secure Fee Basis technical documentation. On-line technical documentation pertaining to the Fee Basis software, in addition to that which is located in the help prompts and on the help screens which are found throughout the Fee Basis package, may be generated through utilization of several Kernel options. These include but are not limited to %INDEX; Menu Management, Inquire option and Print Option File; VA FileMan, Data Dictionary Utilities, List File Attributes.

Entering question marks at the "Select ... Option:" prompt may also provide users with valuable technical information. For example, a single question mark (?) lists all options which can be accessed from the current option. Entering two question marks (??) lists all options accessible from the current one, showing the formal name and lock for each. Three question marks (???) displays a brief description for each option in a menu while an option name preceded by a question mark (?OPTION) shows extended help for that option, if available.

For a more exhaustive option listing and further information about other utilities which supply on-line technical information, please consult the DHCP Kernel Reference Manual.

%INDEX

This option analyzes the structure of a routine(s) to determine in part if the routine(s) adhere(s) to DHCP Programming Standards. The %INDEX output may include the following components: compiled list of Errors and Warnings, Routine Listing, Local Variables, Global Variables, Naked Globals, Label References, and External References. By running %INDEX for a specified set of routines, the user is afforded the opportunity to discover any deviations from DHCP Programming Standards which exist in the selected routine(s) and to see how routines interact with one another, that is, which routines call or are called by other routines.

To run %INDEX for the Fee Basis package, specify the following namespaces at the "routine(s) ?>" prompt: FB*.

Fee Basis initialization routines which reside in the UCI in which %INDEX is being run, as well as local routines found within the Fee Basis namespace, should be omitted at the "routine(s) ?>" prompt. To omit routines from selection, preface the namespace with a minus sign (-).

INQUIRE OPTION

This Menu Management option provides the following information about a specified option(s): option name, menu text, option description, type of option and lock, if any. In addition, all items on the menu are listed for each menu option.

To secure information about Fee Basis options, the user must specify the name or namespace of the option(s) desired. The namespace associated with the Fee Basis package is FB.

PRINT OPTION FILE

This utility generates a listing of options from the OPTION file. The user may choose to print all of the entries in this file or may elect to specify a single option or range of options. To obtain a list of Fee Basis options, the following option namespace should be specified: FB.

LIST FILE ATTRIBUTES

This VA FileMan option allows the user to generate documentation pertaining to files and file structure. Utilization of this option via the "Standard" format will yield the following data dictionary information for a specified file(s): file name and description, identifiers, cross-references, files pointed to by the file specified, files which point to the file specified, input templates, print templates, and sort templates. In addition, the following applicable data is supplied for each field in the file: field name, number, title, global location, description, help prompt, cross-reference(s), input transform, date last edited, and notes.

Using the "Global Map" format of this option generates an output which lists all cross-references for the file selected, global location of each field in the file, input templates, print templates, and sort templates. For a comprehensive listing of Fee Basis files, please refer to the File Section of this manual.
