# 1 General Configuration Management (CM) Information

Table 1 lists the general CM information for the proposed changes for the sustainment effort for Fiscal Year (FY) 2019 to the Decision Support System (DSS) application Patch Release ECX\*3.0\*170. The Patch Release number is assigned by creating a new patch number in the FORUM patch module and includes the following components for the DSS FY19 Annual Sustainment application:

- Project Namespace: ECX
- DSS Extracts Software Application Version: 3.0
- Patch Number: 170

## 2 Configuration Management (CM) Tools

Rational CM is a collaborative software development/delivery environment based on the Jazz technology platform from IBM. Rational CM provides software version control and workspace management and supports parallel development. This product is part of the Office of Information and Technology (OI&T) Chief Information Officer's (CIO) mandated, standardized toolset for OI&T projects.

Table 2 describes where the project artifacts for DSS FY19 are located within Rational.

### 3 Configuration Management of Documents

Project-related documents are managed and controlled within the Rational Tool Suite. Final documentation deliverables are posted in the VA Software Document Library (VDL).

## 4 Configuration Management Development Files

DSS development is completed in accounts created for, and managed by, the Albany Office of Information Field Office (OIFO). The Albany OIFO has multiple accounts used by various development groups. The following subsections describe the CM development files.

### 4.1 Rational Team Concert (RTC) Repository

The DSS application source code is developed using the MUMPS language and development environment. Development source artifacts are not maintained in the Rational Team Concert Repository during development. Instead, development source artifacts/builds are produced and maintained on Vista servers. Table 4 lists the RTC information for the development files (source).

RTC Team Area	Sustainment Team
RTC Stream	Patch ECX*3.0*170

#### 4.1.1 Baseline and Component

Prior to the start of development, a baseline snapshot of Delphi and Massachusetts General Hospital Utility Multi-Programming System (MUMPS) source code was created and posted to Rational CM. Additional snapshots are created and posted throughout the development cycle. Table 5 lists the baseline details for DSS FY19.

**Table 5: Development Files Baseline Details**

Name	Description
ECX_30_170.KID	This was the initial baseline for FY19 development.
<b>Required Patches:</b> ECX_30_146.KID ECX_30_161.KID ECX_30_166.KID	ECX*3.0*146, ECX*3.0*161, and ECX*3.0*166 were previously released annual sustainment patches (2013, 2016, and 2017 respectively) and contain shared routines which make them prerequisites for installing ECX*3.0*170.

#### 4.1.2 Build Information

Builds are performed in the Veterans Health Information Systems and Technology Architecture (Vista) development account(s) for the MUMPS code. Builds will be performed using selected versions of the formally submitted source code contained within the Development Repositories. General build information that results from the build process is maintained in the DSS (CM) repository as detailed in Table 6.

**Table 6: Build Information**

<b>Build Output</b>	The DSS build process does not generate output.
<b>Build Output Directory</b>	N/A
<b>Target Deployment Location</b>	Enterprise-wide National Release (November 2018). Vista Patches are released in FORUM using Packman messages.

### 4.1.3 RTC Build Definition

The Product Component build uses the approved product design and all applicable standards, tool sets, and environments. Table 7 describes the DSS FY19 build.

**Table 7: RTC Build Definition**

Name	Description
ECX*3.0*170	Release Build 2

### 4.1.4 Build Label or Number

The Package Build consists of the individual application components, and the System Build (Release Packages) includes all packages that comprise the entire release for the specific environment.

Table 8 lists the identifier for the derived object or package produced for deployment and/or install for DSS FY19.

**Table 8: Build Label or Number**

Name	Description
ECX*3.0*170	DSS Version 3.0, Patch 170 DSS FY19 Annual Sustainment Patch

## 5 Build and Packaging

The methods of packaging and rules concerning management of a release are determined by OI&T Release Management, working with Product Management to meet the needs of the development team, along with consideration for the operational needs for accepting the product. For VA products being developed, the primary form of a release candidate will be in the form of an electronically packaged release.

### 5.1 Build Log

The build log is found in the DSS (CM) project under the DSS\_Src stream.

### 5.2 Build System/Process Information

The Kernel Installation and Distribution System (KIDS) is used to manually bundle all the code for distribution. The builds are then sent to FORUM, where they become the basis of the patch that is sent to the sites for installation.

## 6 Change Tracking

Change tracking identifies a set of work product versions created to resolve a specific Change Request. For MUMPS-based VistA patches, there are currently no CM tools available that are approved for use by the VA.

For DSS, a baseline snapshot of M routines is created and posted to Rational and may be used to observe changes between fiscal year patches. Table 9 lists the Change Tracking information.

## 7 Release (Deployment) Information

The VIP Release management process is required for any release into production environments, for all national releases (limited or widespread), and for all releases that might have a national impact.

The HPS Application Coordinator is responsible for coordinating the activities for the national release of the product or patch and representing Health Product Support (HPS) for the product or patch release. This includes working with the appropriate Sustainment Manager (SM) to ensure a smooth and successful transition of the product from development to sustainment. This project is using the Initial Operating Capability (IOC) model.

Table 12 lists the release (deployment) POC information.
