Preface

Note: This Technical Manual has not been updated to reflect the conversion to Caché.

Financial and logistics functions for most VA facilities are handled by the **Integrated Funds Distribution, Control Point Activity, Accounting and Procurement (IFCAP)** software, which is an application in the Veterans Health Information Systems & Technology Architecture (VistA).

Purpose of the Technical Manual

The IFCAP Technical Manual contains information that assists programmers, site managers, and Information Resources Management (IRM) technical personnel to operate, maintain, and troubleshoot IFCAP V. 5.1 software. The IFCAP package automates certain functions in Acquisition & Materiel Management (A&MM), Fiscal, and in all of the services that request supplies on VA Form 90-2237 (the "2237"). The primary goal of IFCAP is to integrate these three areas and allow the users to share ordering information. Complementing the ordering process, IFCAP supports the maintenance of inventory levels and automatic reordering of needed supplies.

The Generic Inventory Package (GIP)

The Generic Inventory Package (GIP) module of IFCAP provides options in the Warehouse—General Inventory/Distribution Menu that enable users to manage the receipt, distribution, and maintenance of stock items received for the supply warehouse from outside vendors and distributed to primary inventory points. The system also manages receipt and distribution of items from primary inventory points to secondary inventory points. In this instance, "inventory system" refers to:

- The Supply Warehouse, which maintains a supply of items that are repetitively used by the services ("posted stock")
- The Primary Inventory, which receives supplies directly from the warehouse or from outside vendors; and distributes supplies to its subordinate secondary inventory points
- The Secondary Inventory set up by a primary inventory point, which is directly dependent on that primary inventory point for receipt of orders.

GIP was designed to enable the auto-generation of purchase orders for warehouse stock below stock thresholds and allows warehouse clerks to enter barcode inventory data into IFCAP, manage inventory records, and manage the supply and distribution of goods from the warehouse to the services the warehouse supports.

IFCAP and DynaMed®

Historically, the Veterans' Affairs (VA) Medical Center (VAMC) at Bay Pines, Florida made only limited use of GIP. Beginning in 2004, Bay Pines adopted a commercial off-the-shelf (COTS) inventory software package, DynaMed.® At Bay Pines, DynaMed replaced the Generic Inventory Package (GIP) module of IFCAP. Following a period of manual interface between the two packages, an automated interface was implemented at Bay Pines VAMC in July, 2005. The linkage between IFCAP and DynaMed was designed in such a way to not interfere with non-DynaMed sites, which should see no change in IFCAP functionality.

The IFCAP Technical Manual is also available online at the VistA Documentation Library.

The Logistics Data Query Tool

The National Prosthetics Patient Database (NPPD) contains information, among other things, about prosthetics items purchased for patients. Both IFCAP and NPPD are part of the Veterans Health Information Systems and Technology Architecture (VistA). A new Windows®-based software application, the Logistics Data Query Tool, allows users to sign-on to VistA, access data from both IFCAP and NPPD, and display that data within the application. The Query Tool acts as a "front-end" to enable users to more easily find, display, export and print IFCAP data. The Query Tool is a substitute for the VA FileMan utility program which has traditionally been used to look directly at the MUMPS globals (files) which store IFCAP data. The Query Tool enables users to:

- Search for data and display data by a range of dates
- Sort and rearrange the view of the data; display the data in a custom view
- Print the data
- Export the data into a Microsoft® Excel® spreadsheet file

Chapter 1. Introduction

Note: This Technical Manual has not been updated to reflect the conversion to Caché.

1.1 Special Terminology

See the IFCAP Glossary in 0.

1.2 Overview

IFCAP (Integrated Funds Distribution, Control Point Activity, Accounting, and Procurement) provides support to a variety of administrative activities in the medical center. As the name implies, the Fiscal and A&MM Services are the principal users of this software and reap the greatest benefits. However, Control Points also benefit greatly from the ease of the automated purchasing and accounting procedures and from the quick access to information about their own funds and purchase requests.

Each organizational element uses different components of the software designed to simplify its purchasing and accounting responsibilities. Broadly speaking, IFCAP consists of the following functional components.

Table 1.1. IFCAP Functional Components

| ORGANIZATIONAL ELEMENTS | COMPONENTS |
|-------------------------|----------------------------------|
| Funds Distribution | Fiscal |
| Funds Control | Control Point |
| Expenditure Requests | Control Point |
| Purchase Orders | A&MM |
| Accounting | Fiscal |
| Procurement | All |
| Inventory | Warehouse, Primary and Secondary |
| Receiving | A&MM |
| Electronic Signature | All |

Additionally, each organizational element may have access to a series of reports that provide fast and accurate data about the organization's activities, and a group of utility functions designed to aid in minimal computer chores and cleanup. Even though each of these functional components is used primarily by the organizational elements designated above, it is easy to see that these nine components interact and rely on each other for information. How these components share and transmit information will be discussed. But first, each of the components listed above will be discussed in some detail to explain the capability of the system.

1

1.3 Electronic Signature

A primary security feature in IFCAP V. 5.1 involves the use of Electronic Signatures. Individuals in the system who have authority to approve actions, at whatever level, have the ability to enter and edit their own Electronic Signature Code. This code is required before the documents pass on to a new level for processing or review.

1.4 Funds Distribution (Fiscal Component)

The Funds Distribution portion of IFCAP serves two major needs in Fiscal Service:

- Tracking of funds received
- Funds Distribution to Control Points

First, the program allows the budget office to input and manipulate funds received for the medical center's use. The funds are entered specifying the Fiscal Year, Transfer of Disbursing Authority (TDA), and program area for the funds. Once the figures have been entered into IFCAP, the budget office has the capability of working with these funds. They have the ability to try out various distributions to Control Points before any funds are actually released to Control Points. This feature of IFCAP makes exploring different alternatives quick and easy, and aid in decision-making before distribution.

Since the funds were originally entered into IFCAP by fiscal year and program area, IFCAP can easily record where the funds have gone for reporting. If categories are specified at the outset, the tracking and sorting are accomplished by IFCAP.

The second feature of this component releases the funds to Control Points. After decisions have been made, this simple operation electronically transfers funds to the Control Points as specified by the budget office. Control Points that are also automated (using IFCAP) see the increases and decreases to their funds on their terminals. No work is required for the Control Points to enter these funds into their accounting records. For Control Points that are not electronic (not using IFCAP), a notice of the change in Control Point funds may be printed and then distributed to the Control Point.

1.5 Funds Control (Control Point Component)

Control Points use the funds control component of IFCAP for internal accounting. Once funds have been placed in the Control Point by the budget office, the Control Point bears responsibility for the accounting of these funds, just as they always have. This accounting takes place at the terminal, using IFCAP. When requests to spend funds are approved, IFCAP automatically adjusts the Control Point balance. When the purchases are obligated for amounts that vary from the purchase request, IFCAP updates the Control Point balance automatically. The interface between IFCAP and the Financial Management System (FMS) automates the reconciliation process. Adjustments to obligations due to payments, shipping charges, and interest charges, no longer need to be entered by the Control Point Clerk.

Funds should not be added to the balance by the Control Point except at stations where the Fiscal Service is not using IFCAP. In this situation, the Control Point needs to enter those funds authorized by the Budget Office to establish a beginning balance.

1.6 Expenditure Requests (Control Point Component)

All requests to spend Control Point Funds may be initiated at the terminal using IFCAP. Requests may be initiated by anyone who has access to a terminal and the appropriate access codes. IFCAP makes the item and vendor files available for review to aid in the completion of this work. The Control Point Clerk has the authority to convert the request to a permanent request for the Control Point by assigning a Control Point transaction number. This number, assigned by IFCAP, then serves as a reference number for all future inquiries about the request. For audit purchase orders, once a permanent transaction number has been assigned, the transaction may not be deleted; it may only be canceled. This maintains the transaction in permanent records while halting any further action. Only the Control Point Official has the authority to sign requests and release them to A&MM or Fiscal for further action. This is accomplished through the use of an electronic signature code associated with this official. Once the request has been released, the Control Point Clerk may inquire at any time about the status of the request. IFCAP immediately updates this status as actions are completed by other organizational elements.

1.7 Purchase Orders (A&MM Component)

Purchasing Agents may complete all requests for goods purchased from either federal or non-federal sources electronically. Where the request has been electronically transmitted to A&MM by the Control Point, the information on the 2237 is electronically "dumped" into the Purchase Order prepared for the corresponding request. Non-electronic Control Point requests require that the Purchasing Agent enter information from the 2237 onto the Purchase Order. This is done by signing onto IFCAP and entering the information at the terminal. Purchasing Agents are capable of combining and splitting orders at their terminals. IFCAP also makes a vendor and item file available to Purchasing Agents to aid in completion of this work. PAT numbers (obligation number, Purchase Order number, etc.) can be assigned by IFCAP. Once a purchase order has been established electronically, using IFCAP, all future activities regarding that purchase will be accomplished using IFCAP. These include various amendments and adjustments. These actions are recorded onto the purchase order register by IFCAP, insuring accurate and complete records. Purchasing Agents use their electronic signature code to indicate the order is complete and ready for obligation by Fiscal.

1.8 Accounting (Fiscal Component)

The most frequently used FMS documents are created electronically using IFCAP. Specific options are included for obligating purchase orders, completion of receiving reports, and processing amendments. Any action completed electronically in A&MM Service will be available for Fiscal action in the IFCAP system. Purchasing documents will already contain the

pertinent information for Fiscal review and obligation; receiving reports processed by Fiscal will include the receiving information entered by A&MM. Completion of documents for these actions is a simple matter of reviewing what is displayed on the terminal to insure accuracy. Once this is done, the Accounting Technician enters an electronic signature code to complete the document. Once the electronic signature is entered, the document can be transmitted to Austin. For other types of documents, Accounting Technicians "build" them, using the Create a Code Sheet option, by responding to the appropriate prompts on the terminal. Again, an electronic signature code is entered indicating the information is accurate, and a document is transmitted to Austin. As in other components, information about any transaction is immediately updated by IFCAP and available for inquiries at any time. The Accounting Technician may update the Fiscal Status of Funds at this time, if the site is utilizing this functionality.

1.9 Procurement (All Components)

Allows A&MM Service to transfer IFCAP-generated requests (including those originating from the DynaMed inventory program) onto purchase orders and requisitions, process documents in the warehouse, and create and transmit code sheets to the Austin Automation Center (AAC).

1.10 Inventory (Warehouse, Primary, and Secondary)

Each of the Inventory modules provides an informational header at the top of each menu screen, showing the inventory point, the software version, user name for the job, archive/purge information and more.

The Generic Inventory module maintains inventory stock on-hand levels within the Warehouse, Primary, and Secondary type inventory points.

Stock can be received into the Warehouse or Primary inventory points by receipting in purchase orders. Primaries can also receive stock by receipting Issue Books from the Warehouse or when the Warehouse posts Issue Books. A Secondary can receive stock when the Primary posts distribution orders.

Stock can be distributed from the Warehouse to the Primary when the Warehouse posts an Issue Book. A Primary can distribute stock to a Secondary by posting a distribution order.

Stock adjustments can be made in the Warehouse, Primary, and Secondary as physical counts is performed manually or by using the barcode reader. Receipt or Issue adjustments can be made with the Warehouse inventory point. Also, the Warehouse inventory point can move stock to or from non-issuable.

A Warehouse, Primary, or Secondary inventory point can use the auto-generate option to automatically re-order stock as it drops below defined levels. This option creates a repetitive item list for Primary and Warehouse that can be used to create purchase orders. Secondary inventory points create distribution orders that can be processed by Primary inventory points.

Multiple Primary inventory points may be attached to a single Fund Control Point.

1.11 Receiving Reports (A&MM Component)

When IFCAP-generated purchases are received at the Warehouse, a copy of the purchasing documents may be printed or displayed on a terminal in the Warehouse. The status of the purchasing documents can be easily determined to see if the documents have not been completed. Receiving information can be entered onto these purchasing documents at the terminal. Partial deliveries can be entered. The next time the Purchase Order is accessed, IFCAP informs the user of any goods already received against the Purchase Order. IFCAP also alerts the Warehouse if an overage is being received. Purchasing can be contacted to amend the Purchase Order, or the item can be returned to the vendor.

1.12 Integration

All aspects of the accounting and purchasing activities are not electronic. As described in the preceding pages, each of the modules accomplishes large segments of the work electronically. This chapter discusses the integration of these component parts: what information can and cannot be transmitted from one component to another. The discussion is about information contained in specific transactions initiated by Control Points. More general information about the status of various requests will be available to all users at any time, through use of the various reports.

1.12.1 Fiscal to Control Points

IFCAP transmits budget information from Fiscal Service to the Control Points when both are electronic. Only increases and decreases to allocated funds, as determined by Fiscal Service, are affected by this link. The obligation of documents by the Accounting section update the balances maintained at the Control Points. The Control Points are able to review the committed amount versus the obligated amount using various reports. Information about the activities in Fiscal Service (the fact that an order has been obligated) is available. Entries generated directly from the FMS system update the control point record Running Balance Report.

1.12.2 Control Point to A&MM

Any purchase requests (2237) completed at a terminal are electronically transmitted to A&MM. These requests print out on a printer in A&MM upon approval by the Control Point Official. A&MM determines whether or not the request can be processed further using IFCAP. For those requests that are processed through IFCAP, the information from the Control Point is accessible by A&MM at the terminal.

For Control Points that are not using IFCAP, all requests are forwarded to A&MM on paper, as always. A&MM needs to enter these requests into the system if they are to be processed through IFCAP.

1.12.3 A&MM to Fiscal

Once A&MM enters an order into IFCAP, all future activities regarding that order must also be completed using IFCAP. Information regarding these activities is available to Fiscal Service from IFCAP. Specifically, information for obligating documents and for completing receiving reports (for items purchased and received using IFCAP) is electronically transmitted to Fiscal for their review and action.

Chapter 2. Orientation

2.1 Icons Used in Boxed Notes

Whenever you need to be aware of something important or informative, the Guide will display a boxed note with an icon to alert you. For an example, see the note on page 12.

Table 2.1. Icons Used in Boxed Notes

| Icon | Meaning |
|------|--|
| • | Warning: Something that could affect your use of the DynaMed-IFCAP Interface or of the material available in the databases. |
| • | Information: Additional information that might be helpful to you or something you need to know about, but which is not critical to understanding or use of the DynaMed-IFCAP Interface. |
| * | Tip : Advice on how to more easily navigate or use the Guide or the software. |
| 0 | Technical Note: Information primarily of interest to software developers, IRM or EVS personnel. Most IFCAP users can usually safely ignore such notes. |

2.2 Online Documents and Hyperlinks

About hypertext and hyperlinks in this document:

This document contains "hypertext" that provides links to other parts of this document or to other related documents. *Hypertext* is a computer-based text retrieval system that enables a user to access particular locations in web pages or other electronic documents by clicking on *hyperlinks* in documents. If you are viewing this document on your computer screen (as opposed to reading a printed copy), you will find certain words or phrases that are hyperlinks:

 Some hyperlinks are links to other documents, and are presented in a blue font. For example, note the blue hyperlink to the online Technical Manual shown below this box.

Other hyperlinks allow you to "jump" to specific parts of this document. Typically, these will be imbedded in sentences like "See the IFCAP Glossary in 0." Although such internal cross-references may not be shown in blue, if you move your mouse over such phrases, a popup box will display the link, like this:

```
to specific sections of this document.

CTRL + click to follow link

like "See the IFCAP Glossary in Appendix A."
```

In either case, you may click (depending on your computer's operating system or software version, you may have to hold down the control key while clicking) on the link to see the other document or move to the specified place in this document.

If your copy of this document has been downloaded to a local file:

 Please make certain your copy is current. Compare the revision history of your copy (see Revision History on page iii) with that of the original at

Chapter 3. Implementation and Maintenance

3.1 Operating Specifics

This chapter addresses specific information to determine whether your facility can run IFCAP effectively, including sizing, equipment requirements, journaling, routines and external/internal relations with other VistA packages.

3.1.1 Block Sizing Information

The five main IFCAP files (File #410, Control Point Activity; File #440, Vendor; File #441, Item Master File; File 442, Procurement and Accounting Transactions; and File #445, Generic Inventory) represent the most active and fastest growing IFCAP files. As a result, it is estimated that IFCAP will require the following (note that block sizes are for both APX and MSM):

Table 3.1. Block Sizing

| File Name | Global | Blocks per entry |
|--|----------------------------|------------------|
| Control Point Activity | ^PRCS(410) | 1 |
| Vendor | ^PRC(440) | 1/3 |
| Item Master | ^PRC(441) | 2/3 |
| Procurement & Accounting Transactions* | ^PRC(442) | 3 |
| Generic Inventory (per transaction) | ^PRCP(445) ^PRCP(445.2) | 1/2 |

^{*}Contact your A&MM Service to find out the number of Purchase Orders processed during a Fiscal Year. Multiply this number by three. (A&MM is required to maintain all purchase orders on station for three years.) You can begin to estimate the size of your facility's files as follows:

P x B = Total Disk Blocks needed in global ^PRC(442)

...where P = Number of Purchase Orders and <math>B = number of blocks.

Please note these are estimates of what is necessary for only a subset of the dynamic files of IFCAP.

Please be aware that Fiscal Service is required to have access to this information for 6 to 10 years to meet legal requirements.

3.1.2 Recommended Equipment

3.1.1.2 A&MM

- One work station *each* for:
 - Chief of Purchasing and Contracts
 - o Each Personal Property Management employee
 - Each Purchasing Agent
 - Chief of Accounting
 - Application Coordinator
- One work station for every three employees in the Warehouse
- One dot matrix printer (dedicated to receiving 2237s)
- One dot matrix printer (for Imprest Funds)
- One dot matrix printer for Warehouse (for printing Receiving Reports)
- One 132-column dot matrix printer (for printing Federal Procurement Data System (FPDS) reports, etc.)

3.1.2.2 Fiscal

- One work station *each* for:
 - Budget Analyst
 - Each Accounting Technician
 - o Each Accounts Receivable Clerk
 - Application Coordinator
- One dot matrix printer (dedicated to receiving Purchase orders)
- One 132-column dot matrix printer (for printing free form bills, pre-printed UB-82 forms and reports)
- One laser printer (Reports and Letters)
- One laser printer (for printing collection letters)

3.1.3.2 Control Points

- One work station per larger/heavy-volume service or those services that generate bills
- Multiple, centrally-located terminals for low-volume services
- No printers required unless desired

3.1.4.2 Default Printers

IFCAP allows for the specification of ten different default printers. You may link these default printers to any device number on your VistA system. You may be able to link the same device to different default printers (please consult your Application Coordinator as to what outputs may "share" printers and where to locate these printers within the A&MM and Fiscal Services).

The IFCAP default printers are identified by a set of codes that are contained in the .01 field of Subfile 411.02 in File 411, ADMIN. ACTIVITY SITE PARAMETER. These printers are defined by the IFCAP Application Coordinator to receive IFCAP documents as shown in Table 3.2.

Table 3.2. Default Printer Codes

| Code | Printer |
|------|--------------------------------|
| F | FISCAL (PO,1358) |
| FR | FISCAL (REC.REPORTS) |
| R | RECEIVING (A&MM) |
| S | SUPPLY (PPM) |
| S8 | SUPPLY 2138 |
| S9 | SUPPLY 2139 |
| UB | UB82 |
| IFP | IMPREST FUNDS PO |
| IFR | IMPREST FUNDS RECEIVING REPORT |
| M | FOR MAIL MESSAGE |

3.2 Journaling Globals

It is recommended that the globals shown in Table 3.3 be journaled.

Table 3.3. Globals Journaling Recommendation

| Global | Description |
|----------------------|---|
| PRC | Purchase Order and Debtor files |
| PRCF | Obligation information which is fed back to the Control Point Activities and A&MM Service |
| PRCH | |
| PRCP | Inventory files |
| PRCS | 2237 Request file |
| PRCT | Barcode file |
| PRCH PRCP PRCS | Inventory files 2237 Request file |

3.3 Translation Tables

Table 3.4 provides a list of globals that should be translated to allow access in a distributed operating system environment. All globals are accessed by all users and all IFCAP data is stored in ^PRC* (excluding ^PRCA and ^PRCN).

Table 3.4. Translation Tables

| Global | Description |
|--------|---|
| PRC | Purchase Order and Debtor files |
| PRCD | Fixed data (static files and dictionary type tables for IFCAP) |
| PRCF | Obligation information which is fed back to the Control Point Activities and A&MM Service |
| PRCP | Inventory files |
| PRCS | 2237 Request file |
| PRCT | Barcode file |

3.4 The Production/Training Flag

When adding a site to a test account, the site's PRODUCTION/TRAINING Flag (field #105) in the ADMIN ACTIVITY SITE PARAMETER FILE (#411) should be set to 'TRAINING' (without the quotes) using the *FileMan* edit utility.

Instructions regarding the population of other File #411 fields for this site are in the IFCAP Application Coordinator User's Guide and are addressed in paragraph 4.12.4, Site Parameters.

Note: Setting this flag does *not* remove the need to complete all other activities associated with setting up a test environment.

Chapter 4. Routine Descriptions

4.1 Overview

The IFCAP routines use the namespace PRC (excluding PRCA, PRCN, and PRCZ). For all IFCAP routines, the next letter(s) in the routine name also provides guidance for the module to which that routine belongs. Table 4.1 describes IFCAP internal namespaces.

| PRCHHS | Hashing Routine |
| PRCHID | Vendor Identifier Data |
| PRCHINQ | Add/Edit Surrogate Users And Inquire Card Info |
| PRCHJMSG | This routine builds a MailMan message upon receipt of 2237 Returns or Cancel and sends it to any combination of Accountable Officer, Control Point Official or requestor. |
| PRCHJR01 | This new routine does most of the processing of the incoming OMN^O07 message for 2237 Return/Cancel and filing the requested changes to the IFCAP database. |
| PRCHJR02 | This routine is responsible for receiving and processing application acknowledgment (ORN^O08) messages returned from eCMS. The application acknowledgment is being returned in response to a (OMN^O07) message that was sent from IFCAP to eCMS containing a 2237 transaction. |
| PRCHJR03 | This new routine is invoked by routine PRCHJR01 and contains additional logic for processing the incoming 2237 Return/Cancel message. |
| PRCHJRP1 | This routine starts the building of a report of the Transactions between IFCAP and eCMS that relate to 2237 Returns and Cancels. It is linked to ^PRCHJRP2 |
| PRCHJRP2 | This routine is a continuation of ^PRCHJRP1. It builds the ^XTMP global from which the report is produced and contains the HELP messages. |
| PRCHJS01 | This routine is the main driver to retrieve 2237 data elements, pre-validate 2237 data elements, and send a 2237 (OMN^O07) from IFCAP to eCMS via HL7 messaging. |
| PRCHJS02 | The routine is responsible for retrieving 2237 data elements from a record in the CONTROL POINT ACTIVITY (#410) file. |
| PRCHJS03 | This routine responsible for retrieving 2237 data elements from records in the VENDOR (#440) file, REQUEST WORKSHEET (#443) file, and GENERIC INVENTORY (#445) file. |
| PRCHJS04 | This routine is responsible for building a single HL7 (OMN^O07) message containing |

| Routine | Description |
|----------|--|
| | a 2237 transaction and queues it for transmission to eCMS using HLO APIs. |
| PRCHJS05 | The routine contains functions that are responsible for building the HL7 segments for the 2237 Send (OMN^O07) message. |
| PRCHJS06 | The routine contains functions that are responsible for building the HL7 segments for the 2237 Send (OMN^O07) message. |
| PRCHJS07 | This routine contains the entry action and run routine for the [PRCHJ RETRANS 2237] option. The option allows an IFCAP user having the Accountable Officer role to retransmit a 2237 to the Electronic Contracting Management System (eCMS) via HL7 messaging. |
| PRCHJTA | This routine contains three internal to IFCAP utility APIs. LOG^PRCHJTA stores data from transaction event activities into the IFCAP/ECMS TRANSACTION (#414.06) file. DATA^PRCHJTA retrieves a single record of data from the IFCAP/ECMS TRANSACTION FILE (#414.06) for reporting purposes. CONTACT^PRCHJTA contains code that transforms data for the "ACONTACT" cross-reference on the ECMS EMAIL data field of the EVENT multiple (#414.061,6). |
| PRCHJUTL | This routine contains utility functions for the eCMS/IFCAP HL7 interface. These include extrinsic function \$\$ECMS2237^PRCHJUTL(DA) which returns '1' if the 2237 contains an eCMS ActionUID value. It also contains extrinsic functions \$\$UPD443^PRCHJUTL() and \$\$UPD410^PRCHJUTL() which roll back the 2237 from 'Send to eCMS (P&C)' to 'Pending Accountable Officer Sig.', if eCMS sends an Application Reject (AR) in response to the OMN^O07 message for Send 2237. |

Table 4.25. List of Routines (PRCV)

| Routine | Description |
|----------|--|
| PRCV442A | Used to compile an array of data and send it to the messaging routine ^PRCVPOSD. |
| PRCV442B | Passes the EIN of the purchase order to the message routine so it can pull data from ^TMP. |
| PRCVBLD | Builds HL7 messages using templates from File 414.01. |
| PRCVCKS | This algorithm is intended to be used to compute checksum (hashes) for hierarchically structured files. |
| PRCVEE1 | Passes Inventory Messages from IFCAP to DynaMed. |
| PRCVEX1 | Produces a host file with records containing delimited, variable length fields in the mutually agreed upon format to provide item sourcing data for the initialization of DynaMed. This routine will be invoked by IRM from the MUMPS Command Prompt to extract vendor data for active items potentially used in the DynaMed inventory systems. |
| PRCVEX2 | Will be invoked by IRM from the MUMPS Command Prompt to extract vendor-specific item data for active items potentially used in the DynaMed inventory systems. |
| PRCVIBF | Called by PRCVIB1 when DynaMed transfer Issue Book Fund information to IFCAP. This routine will perform Issue Book Fund Commitment and Posting. |
| PRCVIBH | Receives/Parses Issue Book Fund Transfer Messages from DynaMed. Generates/Sends acknowledgement back to DynaMed. |
| PRCVIMF | Called by IFCAP routines which update ITEM record from time to time. Or, daily batch run for any updates in the ITEM Mater File. |
| PRCVINIT | Allows users to initialize the checksums for the item and vendor files. |
| PRCVLIC | Provides code to send update to DynaMed notifying of canceled line item in 2237. |
| PRCVMON | This utility will run as a background process. For each subscribed fund (in File #414.03), it periodically fetches all uncommitted balances for the control point from file 420. It then compares those values with balances stored in file 414.03, updating those balances at the same time. If any change in an uncommitted balance is detected, the new balances will be published to DynaMed |
| PRCVNDR | Designed to create and send Vendor file update HL7 messages when transmission is needed either immediately after the file update, or periodically as required. |
| PRCVPOSD | This newly created routine will utilize data passed via the input array (PRCVINP) to construct a properly formatted HL7 message of the ORM^O01 event type which will be passed to the VistA HL7 package through a call to INIT^HLFNC2. Some FileMan |

| Routine | Description |
|----------|--|
| | calls and manipulation of format is necessary to prepare the data properly for the agreed upon messaging specifications. Response messages of the ORR^O02 event type will also be routed through the VistA HL7 package to this routine and parsed for processing accordingly. |
| PRCVPOU | Called from Purchase Order Amendment process to transfer the information in the form of HL7 message through routine PRCVPOSD to DynaMed. |
| PRCVRC1 | Using requisition passed from DynaMed, silently builds a Repetitive Item List (RIL). |
| PRCVRC2 | Continuation of PRCVRC1. |
| PRCVRC3 | Continuation of PRCVRC2. |
| PRCVRCA | Extracts RIL cancellation data and passes it to Routine PRCVEE1 which formats data into HL7 Message and then sends data to DynaMed. It also updates relevant info in Audit File #414.02. A bulletin is send if DM DOC ID is missing from an item or if record doesn't get updated properly in Audit File. |
| PRCVRCG | Parses incoming messages from Subscription Activity on DynaMed. |
| PRCVRE1 | Receives an HL7 message from DynaMed and processes it to IFCAP. |
| PRCVEE5 | Receives an HL7 ACK message from DynaMed and processes it to IFCAP. |
| PRCVFMS2 | Generates Supply Voucher from data passed by DynaMed. |
| PRCVREA | Receives an HL7 message from DynaMed and processes it to IFCAP. |
| PRCVRRA | Called from Receiving Report Adjustment process to transfer the information in the form of HL7 message through routine PRCVPOSD to DynaMed. |
| PRCVSUB | Used to add or delete subscription to control point fund update messages passed from IFCAP to DynaMed. |
| PRCVTAP | Extracts 2237 APPROVED data and passes that info to routine PRCVEE1 which formats data into HL7 Message and then sends data to DynaMed. It also updates relevant info in Audit File #414.02. A bulletin is send if DM DOC ID is missing from an item or if record doesn't get updated properly in Audit File. |
| PRCVTCA | Extracts 2237 data when a user enters thru an option Cancel a Permanent Transaction (PRCSCT) and passes that info to routine PRCVEE1 which formats data into HL7 Message and then sends data to DynaMed. It also updates relevant info in Audit File #414.02. A bulletin is send if DM DOC ID is missing from an item or if record doesn't get updated properly in Audit File. |
| PRCVVMF | Used to build an HL7 message to pass to an external inventory system for purposes of communicating a Vendor Update in the form of an MFN^M01 HL7 version 2.4 Master File Update message. |

Chapter 4. Routine Descriptions

Chapter 5. File List

5.1 Overview

This chapter provides the following information:

- List of IFCAP V. 5.1 files (by number) with brief descriptions of the data stored therein
- List of IFCAP V. 5.1 files by file name
- Description of VA FileMan file protection for IFCAP V. 5.1
- List of all IFCAP V. 5.1 files with their associated VA FileMan security access
- Lists of all print, sort and input templates sorted by name and file number

5.2 File List with Description (Sorted by File Number)

Warning: Do not use VA FileMan to edit any of the IFCAP files directly! Using VA FileMan will compromise system integrity.

Use the IFCAP menu options only!

Table 5.1. File List with Description (Sorted by File Number): File 410-414

| File # | File Name |
|--------|---|
| | Contents/Description |
| 410 | CONTROL POINT ACTIVITY |
| | This is the main file in the Control Point Activity package. It contains information concerning each and every control point transaction. There are four basic transaction types: Ceiling, Obligation, Adjustment and Canceled. Each transaction type has a set of fields in this file that relate to it. Some fields relate to all four transaction types. This file should only |

| File # | File Name |
|--------|---|
| | Contents/Description |
| | be edited through the Control Point Activity package. |
| 410.1 | TRANSACTION NUMBER |
| | Keeps track of the last sequential number used for each transaction number series. A transaction number series consists of the following elements separated by hyphens: Station Number - Fiscal Year - Control Point Number. |
| 410.2 | CLASSIFICATION OF REQUEST |
| | A list of request types. Control Point Activity users have LAYGO ("learn as you go") access to this file and will populate it as they use the Control Point Activity package. |
| 410.3 | REPETITIVE ITEM LIST Used to build a list of repetitive (purchase request card type) items. The Control Point Clerk can then generate requests automatically from the entries in this file. At the time requests are generated, the items are pre-sorted by vendor before being entered in the Control Point Activity file as requests. |
| | <i>Note:</i> For sites using DynaMed, the RIL is built automatically via input from DynaMed. This file will include the DynaMed Document Number (which feeds to the IFCAP DM DOC ID field), the DynaMed date needed by, and the date and time that a requisition was created in DynaMed. |
| 410.4 | SUB-CONTROL POINT |
| | Contains the names of sub-control points used by Control Point Clerks and Control Point Officials to sub-divide the funds allocated to them by Fiscal Service. Entries in this file are established by entering a new sub-control point name in the Sub-Control Point field of the Control Point Activity file (#410). |
| 410.5 | CPA FORM TYPE |
| | Contains the type of Control Point Activity form types. For each type of form, certain transaction data is required when creating and editing a request. |
| 410.6 | DELIVERY SCHEDULE |
| | Contains all of the delivery schedules for items that the Control Point wishes to distribute on a request. For each item of a request, they can distribute by date, quantity, Sub-Control Point and/or Delivery Point. It also contains all delivery schedules for each item of a request for a repetitive, non-repetitive or a non-repetitive/repetitive form type. If the Sub-Control Point is entered, the dollar amount of the item's cost is calculated for that Sub-Control Point and all delivery schedules' cost distribution to Sub-Control Points is totaled and the Sub-Control Point Multiple of the request is updated with the Sub-Control Point and its associated dollar amount. If the distributed quantities and the request's transaction dollar amount matches, then entry into the Sub-Control Point Multiple is not required. When the Control Point Official signs the request, this delivery schedule's Sub-Control Point dollar amount distribution updates the Sub-Control Point Balance. |
| 410.7 | SORT GROUP |
| | Contains the Control Point's Sort Group. This is used as a sorting mechanism of requests to categorize their particular or specific cost distribution. Each Control Point specifies a particular Sort Group and only sees their Sort Group. This is one of the files that are pointed-to from the Sort Group field of the Control Point Activity File (#410). The other file |

| File # | File Name |
|--------|---|
| | Contents/Description |
| | that the Sort Group field points to is the Engineering Work Order File. |
| 410.8 | DELIVERY POINT |
| | Contains the multiple delivery schedule Delivery Points under the request's item multiple. This is any reference that the Control Point wishes to enter. This entry can be a room, building, location, or point that particular items will be delivered or distributed by the Control Point. |
| 410.9 | AUTHORITY OF REQUEST |
| | This file contains a list of officially approved authorities for 1358 creation. Entries in this file are populated via national patches only, no data should be entered, edited or deleted within this file. |
| 411 | ADMIN. ACTIVITY SITE PARAMETER |
| | Contains parameters that allow each Site to tailor the IFCAP system to meet their needs. Use of this file also allows the users to run multiple, independent stations on a single computer. |
| 411.2 | FACILITY TYPE (TEMPORARY) |
| | This temporary file will be replaced by new fields on the Institution File. It is used only for printing the facility type on IFCAP generated forms and reports (such as Purchase Orders and Receiving Reports). |
| 411.3 | IFCAP CONVERSION DISCREPANCY |
| | Contains information pertaining to incorrectly converted FMS VENDOR UPDATE. This file is populated during the IFCAP vendor conversion process when a record cannot be properly converted. |
| 411.4 | IFCAP CONVERSION ERROR |
| | Contains a list of error messages. Rather than burying the error messages in a routine, the messages are available here to review or change. |
| 411.5 | IFCAP PARAMETERS |
| | Contains entries that are <i>not</i> site-specific for IFCAP. Entries <i>are</i> specific to the computer that is running IFCAP. |
| 414.02 | DYNAMED IFCAP INTERFACE AUDIT |
| | Contains data held for HL7 message transmission audit purposes. Includes the DynaMed document number, information about (or pointers to) item information, vendor number and repetitive item list (RIL) number. Also includes the Vendor number, the RIL number, 2237 number, purchase card order number, receiving data, various dates and times for specified transactions, and information about the person(s) who performed the operations. |
| 414.03 | PRCV SUBSCRIPTION [COTS INVENTORY SUBSCRIPTION CONTROL] |
| | In the event that an external system needs to be notified when an event of some type occurs, a publish/subscribe interface allows messages to be sent to that system when the event occurs. Contains a list of active subscriptions, and records are added or deleted in response to "subscribe" or "cancel" messages received from the external system. More than one type of subscription is supported. |
| 414.04 | RECORD CHECKSUM |
| | |

| File # | File Name |
|--------|--|
| | Contents/Description |
| | This file is use to store checksums associated with objects such as file records. The reason for this level of generality is that it is at times convenient to associate a checksum with a subset of fields in a file (or possibly other objects). This means it may be necessary to support more than one checksum on the same file or other type of object class. <i>See</i> 0. |
| 414.06 | IFCAP/ECMS TRANSACTION |
| | This file is designed to hold the various types of transactions that support communication for the IFCAP and the Electronic Contract Management System (eCMS) interface. Reports from this file will be used by IFCAP users to follow the interface activity to assure that communication with the eCMS vendor portal is timely and effective, and to provide contact information if needed. |

Table 5.2. File List with Description (Sorted by File Number): File 417-420

| File # | File Name |
|---------|---|
| | Contents/Description |
| 417 | FMS TRANSACTIONS |
| | Holds FMS reconciliation data for a Fiscal Service. Each entry contains the site, control point fiscal year, quarter, transaction amount, and any FMS generated data. |
| 417.1 | FMS EXCEPTIONS |
| | This file is used to hold 820 transmissions returned from FMS for which no control point could be determined. Budget elements returned on the transmission did not match budget elements stored on the site's control point files. This file is used to generate the FMS Exceptions Report. |
| 420 | FUND CONTROL POINT |
| | Contains parameters that allow the IFCAP user to define and maintain separate balances for funding at their station. |
| 420.1 | COST CENTER |
| | Contains codes used by Fiscal service to subdivide funding and spending information by area of usage. |
| 420.13 | PRCD SD PROGRAM |
| | Contains programs used by fund control points. |
| 420.131 | PRCD SD FCP/PRJ |
| | Contains FCP/PRJ used by the fund control points. |
| 420.132 | PRCD SD OBJECT CLASS |
| | Contains OBJECT CLASS used by the fund control points. |
| 420.133 | PRCD SD JOB |
| | Contains JOBS used by the fund control points. |

| PRCD FUND |
| Contains FUNDS used by the fund control points. |
| PRCD FMS SUB-ALLOWANCE ACCOUNT |
| Contains SUB-ALLOWANCE ACCOUNT data used to map fund control points. |
| PRCD SD ADMINISTRATIVE OFFICE |
| Contains administrative office codes used by the fund control points. |
| PRCD SD DOCUMENT TYPE |
| Contains document types used by the required fields table. |
| PRCD SD DOCUMENT DATA ELEMENT |
| Contains document data elements used by the required field table. |
| PRCD REQUIRED FIELDS |
| Contains the required fields used by the fund control points. |
| PRCD STANDARD DICTIONARY |
| Contains all standard dictionaries used in IFCAP. |
| PRCD SD STATUS |
| This is used to indicate the status of an entry in file. |
| BUDGET OBJECT CODE |
| Contains codes used by Fiscal service to subdivide procurement amount information by type of item used. |
| PRCD FUND/APPROPRIATION CODE |
| Contains all ALD codes specified in MP4 Part V. In addition it contains the appropriation |
| symbol associated with the ALD code and a pattern necessary to create the YALD code for the 921 transaction. |
| CALM/LOG TRANSACTIONS CODE LIST |
| Contains the names and templates for all of the CALM and LOG I Transaction Codes. |

| Contains a set of codes designating standard packaging units used in both procurement and distribution of goods |
| REASON NOT COMPETED |
| |

| File # | File Name |
|--------|---|
| | Contents/Description |
| | Allows the user to indicate why a particular purchase order has not been competed. |
| 420.52 | SOLICITATION PROCEDURE |
| | Allows the user to indicate the solicitation procedure used to purchase goods or services. |
| 420.53 | EXTENT COMPETED |
| | Allows the used to indicate the degree of competition used for a purchase order. |
| 420.54 | EVALUATED PREFERENCE |
| | Allows the user to indicate the evaluated preference of businesses based on their socioeconomic grouping. |
| 420.55 | EPA DESIGNATED PRODUCT |
| | Allows the user to indicate if a purchase order contains any items with EPA designated products. |
| 420.6 | CODE INDEX |
| .20.0 | Contains FPDS codes for fiscal years 1988 and 1989. These FPDS codes are used to track the types of businesses from which goods are being procured, in order to do reporting to Central Office. All codes with internal entry #'s below 100 are for fiscal year 1988. All codes with internal entry #'s above 100 are for fiscal year 1989. |
| 420.7 | BUDGET DISTRIBUTION CODES |
| | Contains a listing of the distribution codes used when entering funding transactions in the Funds Distribution portion of IFCAP. This information may be edited. |
| 420.8 | SOURCE CODE |
| | The codes used in this file designate a broad category defining the procurement source for goods. The codes are used to update centralized reporting for procurement and define either specific government sources such as DEPOT and GSA, or ways of procuring goods from outside sources, such as whether or not they are purchased using a government contract. |
| 420.9 | INTERMEDIATE PRODUCT |
| | This file is used for identifying a particular type of item for cost accounting purposes. |
| 420.92 | PRCU IFCAP/FMS CONVERSION |
| | Contains the FMS/IFCAP conversion files. |
| 420.96 | IFCAP/FMS OBLIGATION RECONCILIATION REPORT |
| | Contains information necessary to print the 850 report after the OOP message is processed from Austin. |
| 420.97 | IFCAP/FMS FCP RECONCILIATION MESSAGE |
| | Holds the Fund Control Point balances for a station that is returned from Austin during the FCP conversion process. |
| 420.98 | IFCAP/FMS FCP RECONCILIATION REPORT |
| | Holds the errors that occurred during the Fund Control Point conversion process. This data is used to print the Outstanding Obligations Report. |
| 420.99 | IFCAP TEMP FCP SNAPSHOT |
| 420.99 | IFCAP TEMP FCP SNAPSHOT |

| File # | File Name |

| | Contents/Description |
| 421 | FUND DISTRIBUTION |
| | Contains the transaction used to distribute funds to control points. |
| 421.1 | MULTIPLE DISTRIBUTION |
| | This file is used by the Funds Distribution module to multiply distribute funds to control points. |
| 421.2 | CALM/LOG TRANSMISSION RECORD |
| | Contains a history of the CALM/LOG Transactions that have been transmitted to Austin. This information is stored by Batch Number and Transaction Number. |
| 421.3 | CALM ERROR MESSAGES |
| | Contains a listing of all the CALM Error Messages specified in MP4 Part V. This file is used by Accounting to look up these messages. |
| 421.4 | FISCAL LOCK |
| | This file is used to "mark" a record while it is being edited. It serves to ensure that simultaneous editing of financial/procurement records does not occur. |
| 421.5 | INVOICE TRACKING |
| | This file is used to record payment invoices that require Control Point sign-off. |
| 421.6 | FUND DISTRIBUTION (TEMP TRANS) |
| | This file is used by the Funds Distribution module to distribute funds to Control Point. |
| 421.7 | INVOICE DLN COUNTER |
| | This file is used to generate sequential tracking numbers for Invoice Tracking. |
| 421.8 | FISCAL STACKED DOCUMENTS |
| | This file will hold the printouts that are automatically generated within IFCAP. The user may then select to print from this file at a later date/time. |
| 421.9 | INVOICE PARTIAL COUNTER |
| | This is a file of partial number counters in which each obligation has its own counter. It is used to get the next available partial number for a payment voucher associated with a given obligation. |
| 422 | CALM/LOG TEMPLATE MAPS |

| File # | File Name |
|--------|--|
| | Contents/Description |

Table 5.4. File List with Description (Sorted by File Number): File 423-440

| File # | File Name |
|--------|--|
| | Contents/Description |
| 423 | CALM/LOG CODE SHEET |
| | Contains the completed CALM/LOG Code Sheets. |
| 423.4 | ISMS REASON CODES |
| | Contains the Reason Code used in HLS and OLS transactions. |
| 423.5 | PRC IFCAP MESSAGE ROUTER |
| | Contains a listing of the transactions that can be handled by the PRCOISM IFCAP server. This file also contains the mail group that will receive any transaction processing error message and the entry point (TAG^ROUTINE) for each different transaction processing. |
| 423.6 | ISMS/FMS TRANS |
| | Contains the transactions that have been received from Austin through MailMan. For an entry to be made in this file, the transaction type must be found in File 423.5. For each complete transaction, based on the entry point (TAG^ROUTINE) from File 423.5, a Taskman job is set up to process that transaction. |
| 423.9 | CALM/LOG BATCH TYPE |
| | Contains a list of the various CALM and LOG I Batch Types managed by the facility. In addition, it also contains the appropriate physical address used by Network Mail for each batch type to enable the Code Sheet Batches to be transmitted to Austin DPC. |
| 424 | 1358 DAILY RECORD |
| | Contains a summary record of each authorization, obligation, and liquidation against a 1358 established in file 442. |
| 424.1 | 1358 AUTHORIZATION DETAIL |
| | Contains detail history of each bill submitted for payment for each authorization on a 1358. |
| 440 | VENDOR |
| | Contains the listing of Vendors used by the facility. The data includes the name, address, contact person, contract number and FPDS data used when entering a request and purchase order. |
| 440.2 | DIRECT DELIVERY PATIENTS |
| | Contains the name and address of those patients who received deliveries of goods directly from a vendor. This address could be a Nursing Home Care address or another vendor address. |

| File # | File Name |
|--------|--|
| | Contents/Description |
| 440.3 | VENDOR EDIT |
| | Contains the listing of Vendors used by the facility. The data includes the name, address, contact person, contract number and FPDS data used when entering a request and purchase order. |
| 440.5 | PURCHASE CARD INFORMATION FILE |
| | This is a charge card master file. |
| 440.6 | PURCHASE CARD ORDER RECONCILE |
| | This file is used to store ORACLE records for reconciliation. |
| 440.7 | MONTHLY ACCRUAL |
| | During the compile performed in option Accrual (Monthly) [PRCB MONTHLY ACCRUAL], entries are added to this file listing total unpaid and unreconciled credit card order amounts by budget string "Fund/Beginning Budget Fiscal Year/ Administration or Staff Office/Accounting |
| | Classification Code/Cost Center/BOC" within month and station. This file then serves as the source for generating the appropriate SV documents to be sent to FMS. |
| 440.8 | PRCH AFC CHARGE TRANSMISSION LOG |
| | Contains a record of each transmission batch from the Credit Card System of Purchase Card Charges and Purchase Card Demographic Changes to be posted to IFCAP files (#440.6 and #440.5, respectively). This file is the source for the report Daily Charge Transmission Log [PRCH DAILY CHARGE TRANS LOG]. |

Table 5.5. File List with Description (Sorted by File Number): File 441-442

| File # | File Name |
|--------|--|
| | Contents/Description |
| 441 | ITEM MASTER |
| | Contains descriptive information for any supply item that can be ordered. Contains information needed for purchasing or ordering the item. Any item that is purchased repetitively should be entered to this file. |
| 441.2 | FEDERAL SUPPLY CLASSIFICATION |
| | Contains codes used to classify types of items into categories to be used for centralized reporting of procurement. Examples of categories are "DRUGS & BIOLOGICALS," "SURG. DRESS. MATERIALS," etc. |
| 441.3 | FSC GROUP TITLES |
| | Contains codes used to classify types of items into categories to be used for centralized reporting of procurement. The categories are broader than those on the "FEDERAL SUPPLY CLASSIFICATION" file. Examples are "CHEMICALS" and "SUBSISTENCE." |
| 441.4 | DLA/LOG CODES |
| | A general purpose file containing assorted DLA and LOG codes used when constructing |

| | electronic transmissions to either the Austin LOG system, or the DLA system. The "SCREENING CODE" field is used to limit the choice of codes available to the user to an appropriate set. |
| 441.6 | TYPE OF REQUISITION AMENDMENT |
| | Contains a list of the allowable types of amendments that can be made to a Requisition after it has been Obligated. The file is used during the Amendment process, both to allow the user to select the type of amendment, and to direct the programs to the proper entry point for processing the type of amendment selected. |
| 441.7 | AMENDMENTS TO DELIVERY SCHEDULES |
| | Contains the delivery locations and dates for display on purchase orders. |
| 442 | PROCUREMENT & ACCOUNTING TRANSACTIONS |
| | This is the main file for IFCAP Supply. It contains all of the Purchase Order and Requisition data both while the record is being processed, and as an on-line history record after the record has been completed. It also contains information pertaining to Accounts Receivable transactions. |
| 442.01 | DM DOC ID |
| | Contains a list of the DynaMed Document IDs (Field #48, DM DOC ID) included in a DynaMed requisition, an IFCAP Repetitive Item List (RIL), an IFCAP 2237, or an IFCAP Purchase Order. The file is used during the RIL, 2237, Purchase Order and Amendment processes to allow the linking of DynaMed item records with IFCAP Purchase Orders. |
| | The DynaMed Document ID is a unique character string associated with each item in the DynaMed Item Master File. It is comprised of 1 digit for the year, concatenated with the 3 digit Julian Date plus a 4 digit sequential number and up to 6 characters. <i>Format:</i> YDDD-9999-CCCCCC. This number is provided by DynaMed, user input is not required. <i>This file cannot be edited.</i> DynaMed allows a maximum of 16 characters. This number will be associated with an order request from DynaMed. Each order request will identify a single item in Item Master File in IFCAP. It is recorded in this file for auditing purpose and to ensure that requests bearing the same DynaMed Document ID are only processed once by IFCAP. |
| 442.2 | TYPE OF AMENDMENT |
| | Contains a list of the allowable types of amendments that can be made to a Purchase Order after it has been Obligated. The file is used during the Amendment process, both to allow the user to select the type of amendment, and to direct the programs to the proper entry point for processing the type of amendment selected. |
| 442.3 | PURCHASE ORDER STATUS |
| | Contains a listing of all of the possible status codes that can be assigned to a 2237 request or a purchase order. This file cannot be edited. The file is used both to inform the user as to what processing has been done to a request or Purchase Order, and also by the programs to screen and direct each request/Purchase Order into the correct processing path. |
| 442.4 | PURCHASE AUTHORITY |
| | Contains a listing of the Purchase Authorities as specified in the FPMR. |

| File # | File Name |
|--------|--|
| | Contents/Description |
| 442.5 | PAT TYPE |
| | Contains a listing of all the appropriate Methods of Processing that apply to a purchase order. <i>This file cannot be edited</i> . The Method of Processing directs each type of Purchase Order or Requisition into the correct processing path through IFCAP. |
| 442.6 | PAT NUMBER |
| | Contains prefix information for a PAT number. It allows the user to reserve blocks of PO numbers for specific groups of users, so that IFCAP can automatically assign the next sequential number available within the block when a new PAT is added to file 442. |
| 442.7 | ADMINISTRATIVE CERTIFICATIONS |
| | Contains a listing of pre-set clauses used on purchase order. The file is initially sent with data, but each station can then edit or add their own clauses. Once a clause is entered to this file, the Purchasing or PPM agent can then copy the clause into any Purchase Order or Requisition, which will cause it to be printed in the PO. Comments block on the PO or Requisition form |
| 442.8 | DELIVERY SCHEDULE (ORDER) |
| | Contains the delivery locations and dates for display on purchase orders. |
| 442.9 | ELEC RECEIVING REPORT BATCH |
| | Contains data about the Electronic Receiving Reports that are transmitted to Austin. |

Table 5.6. File List with Description (Sorted by File Number): File 443-445

| File # | File Name |
|--------|---|
| | Contents/Description |
| 443 | REQUEST WORKSHEET |
| | Contains a listing of the requests that have been transmitted to A&MM but not yet transferred onto a Purchase Order or Requisition. |
| 443.1 | IFCAP PURGEMASTER WORKLIST |
| | Contains the entries to be processed by PurgeMaster. |
| 443.2 | IFCAP PURGE PARAMETERS |
| | Contains the parameters for the PurgeMaster Utility. |
| 443.3 | IFCAP PURGE INPROCESS |
| | This file is a temporary repository for transaction being processed by PurgeMaster. In the event of a system failure, these entries are restored into the PurgeMaster Worklist file. |
| 443.4 | TYPE OF SPECIAL HANDLING |
| | Contains the list of special handling instructions. |
| 443.5 | PO/REQUEST/R.R. PRINT LOG |
| | The operator is allowed to reprint a batch of requests in Supply, or reprint a batch of Purchase Orders in either Fiscal or Supply, or reprint a batch of Receiving Reports in Fiscal that were previously printed within a date/time range. This option could be used if |

| File # | File Name |
|--------|--|
| | Contents/Description |
| | the printer was not working during those times. This file is used to keep lists of Requests or Purchase Orders printed, to allow the operator to review the list before reprinting. |
| 443.6 | AMENDMENTS |
| | This is a temporary holding file used to store a purchase order while an Amendment is being created. Changes to a PO are actually made to this file, and not to the original PO. If the user completes and approves the Amendment, the changes are copied to the PO. Whether approved or not, the "copy" is deleted from this file when the user is finished. The file is also used for amendments to Requisitions. |
| 443.75 | EDI SENDER |
| | This file has the information sent from Austin in the ACT or PRJ transactions. These transactions inform IFCAP if the EDI package accepted or rejected the PHA transaction sent to Austin. In addition this file also has the POA status sent back from the vendor about the PHA order. The POA status is placed into the EDI STATUS CODE 1 or 2 and EDI STATUS QUANTITY 1 or 2 fields in the ITEM multiple of file 442 for the PHA order. |
| 443.76 | EDI ERROR CODES |
| | Holds list of REJECT REASON CODEs that are sent from Austin when a PHA or an RFQ is rejected. This file is pointed by a field (#9) in EDI STATUS FILE (#443.75). |
| 443.8 | LOCAL PROCUREMENT REASON CODES |
| | This file is a listing of the reasons for procuring items locally |
| 443.9 | IFCAP PENDING ARCHIVE |
| | This file is a local Archive/Purge file that documents what records are pending archive. Prior to initiating an archive, this file should be empty. This file is populated by the menu option Find Archivable IFCAP Records [PRCG ARCHIVE FIND]. |
| 444 | REQUEST FOR QUOTATION |
| | This file serves as a worksheet for the Request for Quotation process. The Purchasing agent can edit data imported from one or more 2237s. This data is then the basis for the electronically submitted RFQ. Correspondence via 864 Transactions (Text Messages) are stored in a multiple of this file. The quotes submitted by vendors are also stored in a multiple of this file. |
| 444.1 | RFQ VENDOR |
| | Contains vendors used in the RFQ process who are not found in the site's main VENDOR file (#440). Once a vendor is selected as the source during RFQ award, an entry for the vendor should be made in file 440 so that the firm will be acknowledged as a vendor ("vendorized") by the Austin Automation Center and be made ready for payment transactions. In lookups for vendors in the RFQ module, File #440 is first searched for the vendor. If the vendor is not found, the search continues in File #444.1. If not present in this file, the user has the option to add a vendor to this file |
| 444.2 | SIC CODE |
| | Contains the Standard Industrial Classification Codes, which are used to classify organizations by economic activity. |
| 444.21 | SIC CODE GROUPS |
| | |

| File # | File Name |
|--------|--|
| | Contents/Description |
| | Contains categories for lumping SIC Codes and will be used to facilitate lookups. |
| 444.3 | RFQ COUNTER |
| | Contains counters for getting the next available sequence number. There is a separate counter for each combination of Station # and Fiscal Year. This sequence number is padded on the left with zeros to form the sequence number portion (fourth piece) of the RFQ number. (i.e. 688-96-RFQ-00014) |
| 444.4 | RFQ EDITING PREFERENCE |
| | This file stores the user's editing mode preference (FileMan Input Template or ScreenMan Form). |
| 445 | GENERIC INVENTORY |
| | Contains descriptive and inventory information for any entity that wants to maintain a perpetual inventory, automate their item distribution function, and automatically generate stock replenishment orders based on inventory needs. |
| | There are three types of inventory points that can be on this file: |
| | Warehouses, Primary Distribution Points (locations that are allowed to order directly from supply), or Secondary Distribution Points (locations that must order through a Primary Distribution Point). |
| 445.1 | INVENTORY BALANCES |
| | This file stores the beginning monthly balances for the items stored in the inventory points. |
| 445.2 | INVENTORY TRANSACTION |
| | USED BY GENERIC INVENTORY PROGRAM (GIP). This file is used to keep a log of ANY transaction that affects the inventory level. The file will be updated ONLY if the flag on the inventory point "KEEP DETAILED TRX. HISTORY" is set to "Y" (YES). Records are then automatically added to the file during the processing of any transaction that affects the inventory level (receiving, distribution, usage, manual adjustments, etc.). |
| | NOTE: This file should be frequently purged! |
| 445.3 | USED BY GENERIC INVENTORY PROGRAM (GIP). This file is used to store distribution orders from a Primary Inventory/ Distribution point to a Secondary. An order can be entered either at the Primary, for the Secondary, or at the Secondary, if they are automated. When an order is posted, the inventory level at the affected inventory points are updated, history is updated, and the record is deleted from the file, unless items are backordered. Items on backorder are left on the record until the back-order function has been completed. |
| 445.4 | STORAGE LOCATION |
| | This file is used to describe storage locations within any Generic Inventory Point (i.e. the Bins, Shelves, Rooms, etc. in which supplies are stored). The format for creating codes related to a storage location can be defined by each inventory point to meet their own needs. |
| 445.5 | AUTOMATED SUPPLY STATION |

| File # | File Name |
|--------|--|
| | Contents/Description |
| | This file contains information that assists GIP in communicating correctly with |
| | a supply station. |
| 445.6 | GROUP CATEGORY |
| | USED BY GENERIC INVENTORY PROGRAM (GIP). This file stores codes and related descriptions used for grouping inventory items. Items might be grouped for printing catalogs, doing physical counts, or other reports. Each item on the inventory (file 445) should have a group category. |
| 445.7 | CASE CARTS |
| | This file is used to define items which make up a case cart. |
| 445.8 | INSTRUMENT KITS |
| | This file is used to define items which make up an instrument kit. |

| | Contents/Description |
| 446 | DISTRIBUTION/USAGE HISTORY USED BY GENERIC INVENTORY PROGRAM (GIP). This file is used to store data needed for cost accounting. The data is updated automatically by the Generic Inventory system, when a distribution order (from a Primary to a Secondary) is posted, when an adjustment is made to distribution, or when usage within an inventory point is recorded. The file keeps a record of total dollars distributed/used by month, and by the cost center |
| | that distributed or used the supplies. Reports can then be generated from this file by cost center, or broken down further by MIS Bed Sections (defined for each inventory point). NOTE: For usage within an inventory point (i.e. goods were distributed to the end user at this point and not distributed to another inventory/ distribution point), the DISTRIBUTED TO and DISTRIBUTED FROM fields will be the same. |
| 446.1 | INVENTORY DISTRIBUTED PATIENT SUPPLIES |
| | This file is used to track inventory items that are distributed from the secondary to the patient. |
| 446.4 | BARCODE PROGRAM |
| | Contains barcode programs and data uploaded from the barcode reader to be used as part of the Barcode Inventory process. |
| 446.5 | CUSTOM LABEL |
| | Contains the custom labels to be used as part of the Barcode Inventory process. |
| 446.6 | SPECIALTY COMMANDS |
| | Contains the Specialty Commands for the barcode reader and printer to be used as part of the Barcode Inventory process. |
| 446.7 | CLRS REPORT STORAGE FILE |
| | Used to store "*" delimited data runs of the Days of Stock on Hand Report and Stock |

| File # | File Name |
|--------|--|
| | Contents/Description |
| | Status Report. |
| 447 | INVENTORY LOCK MANAGEMENT |
| | This file is used to manage the locking of files by a user in the inventory package. When a user locks a file or inventory item, an entry is made in this file. Other users that try to access the locked file or item will see a message displaying the user and option that is locking the file or item. |
| 447.1 | AUTOMATED SUPPLY STATION PROCESSING QUEUE |
| | This file is populated with information originating from the automated supply |
| | station HL7 transactions. Once the data stored here has been processed by GIP |
| | and the GIP files have been updated appropriately, the record will be deleted. |
| | This file allows information from the supply stations to flow to GIP even if |
| | the file 445 entry for a particular secondary inventory point is in use. |

8989.51 PARAMETER DEFINITION FILE

This file resides in the ^XTV namespace, and contains characteristics of parameters used by various programs. The parameters store settings that affect IFCAP operation at the site.

• IFCAP has set up a record in this file for the parameter PRCV COTS INVENTORY. This parameter is used by the DynaMed-IFCAP Interface and acts as the "switch" for the interface. This field currently has two allowable values: 0 or 1. For sites using the DynaMed-IFCAP Interface, this field should be set to '1.'

```
NAME: PRCV COTS INVENTORY

MULTIPLE VALUED: No

VALUE TERM: 0 or 1

VALUE DATA TYPE: set of codes
INSTANCE DATA TYPE: numeric
DESCRIPTION:
This parameter identifies which COTS product is being utilized for the inventory management system of the site. The current values are:

NONE - means no COTS product is being used and the inventory management system in use is GIP/IFCAP

NONE - means the DynaMed product is being used

PRECEDENCE: 1

ENTITY FILE: SYSTEM
```

• IFCAP has set up 4 records in this file related to the Clinical Logistics Report Server. These parameters will allow staff to control the range of automated GIP reports as instructed by the Clinical Logistics Office as well as the chosen output

directory for the resulting extract files.

- All of these parameters, except for the PRCPLO EXTRACT DIRECTORY, will be set (via a post-install routine) to a default value when PRC*5.1*83 is installed and can later be modified by use of the PRCPLO SYSTEM PARAMETERS option.
- Each site, upon initial setup, should enter the path of the destination directory for extract files as the PRCPLO EXTRACT DIRECTORY using the PRCPLO SYSTEM PARAMETERS option and coordinate with IRM to ensure that the value entered is correct. All future changes to this parameter should be coordinated with IRM.
- Before beginning the procurement extracts, the system attempts a test write to the directory specified in the PRCPLO EXTRACT DIRECTORY parameter. If the test write fails, then a notification e-mail is sent to the PRCPLO CLRS NOTIFICATIONS mail group informing of the situation. See the *IFCAP Application Coordinator User's Guide* (PRCPLO CLRS NOTIFICATIONS Messages) for the content of the message.
- Task scheduling instructions will be included with the patch.
- Two additional parameters, added for CLRS by the GIP ODI patch PRC*5.1*98, are appended to the list below.

5.4 File Protection

This file protection information is also found in chapter 4 of the IFCAP V. 5.1 *Package Security Guide*, available at http://www.va.gov/vdl/application.asp?appid=42.

The IFCAP V. 5.1 package files contain data that is prepared according to the policy and procedures of the Office of Budget and Finance and the Office of Acquisition and Materiel Management. Therefore, the files used by IFCAP generally carry a high level of file protection. The data dictionaries for IFCAP should NOT be altered. Screening logic has also been enabled on IFCAP files to prevent access through VA FileMan.

The IFCAP package uses eight VA FileMan file protection levels on its files:

Table 5.10. File Protection

| Protection Level | Description |
|---------------------|----------------------------------|
| (none) | No special security is enabled |
| # | Site Manager access |
| @ | Programmer access to files |
| [| READ Access |
|] | WRITE Access |
| % | Delete Access |
| \$ | LAYGO ("learn as you go") Access |
| ^ | Cannot be accessed |

5.5 Files with Security Access

This file security access information is also found in chapter 4 of the IFCAP V. 5.1 *Package Security Guide* (see http://www.va.gov/vdl/application.asp?appid=42)

Chapter 6. Exported Options

6.1 Menu Structure and Options Definitions

The following pages display the exported IFCAP V. 5.1 primary menu options with descriptions. There are eight main IFCAP menus, devised to reflect the actual positions at a facility:

- Combined A&MM Menus
- Control Point Official's Menu
- Funds Distribution & Accounting Menu
- Purchase Card Menu
- IFCAP Application Coordinator Menu
- Primary Inventory Point Main Menu
- Secondary Inventory Point Main Menu
- Warehouse— General Inventory/Distribution Menu

6.2 Assigning Menus and Security Keys to Users

Table 6.1 shows the suggested menus and associated security keys for each type of user. Please note these are only suggested menus. Your facility has the ability to create individual menus based on specific needs using Menu Management. The Diagram Menu Options feature of the Kernel package may be used to generate printouts of full menus provided by IFCAP. It is important to work with the IFCAP Application Coordinator in assigning these menus, options and security keys.

DESCR:

Auto-generates a Primary or Warehouse inventory point Repetitive Item List (RIL). The auto-generation will use the selected group categories and vendors (stored in the mandatory or suggested source field in the primary and warehouse inventory points) for selecting the items. When an item's available quantity (quantity on hand plus quantity due-in minus quantity due-out) falls below or equal to the standard reorder point, the item will be ordered. When an item's available quantity falls below or equal to the optional reorder point, the item will be ordered if there are other items for the same vendor which are being ordered due to the available quantity falling below the standard reorder point (if items only fall below the optional order point for a vendor, the order will not be generated).

The quantity to order is the difference between the available quantity and the normal stock level. Conversion factors (warehouse to primary, vendor to primary, or vendor to warehouse), vendor minimal issue quantity, and vendor issue multiple also factor into the total quantity of an item to order.

At completion of auto-generation, a series of reports can be generated. Each item in the inventory point will appear on one of the reports. This will aid in determining why an item was or was not ordered.

| ROUTINE: PRCPRALS DESCR: Produces a report that shows the current inventory levels versus the IFCAP-estimated levels. The report includes the item master number, description, NSN, unit per issue, group category, quantity on-hand, quantity due-in, quantity due-out, reorder point, issue multiple, average unit cost, total value, and whether the item is set to "kill when zero." The Warehouse will have the option to sort by the selected NSN or account code, and the report is sorted by account code and NSN. The Primary will have the option to select specific group categories to display, and the report is sorted by group category and description.

The user has the option to print a summary of the report data. By printing the summary, the report will not display each item. Each month, routines are scheduled to run the data extracts associated with PRC*5.1*83 (CLRS). As part of this run, the VMS flat files for both the Procurement and GIP extracts are created for FTP transmission. This routine handles the GIP data extracts, while routine PRCHLO5 handles the Procurement extracts.

This is the option used by the Prosthetics and Clinical Logistics Office to gather GIP information. It runs the Stock Status Report and Days of Stock on Hand Report for every combination of station and active inventory point present within a system and creates extracts in the CLRS REPORT STORAGE file (#446.7).

These extracts are "*" delimited files and encompass data extracted from the first day of the previous month to the last day of the previous month. The extracts are stored in the CLRS REPORT STORAGE file (#446.7) until the FTP transmission to the CLRS occur as instructed by the Prosthetics and Clinical Logistics Office

Produces the Cost Trend Analysis Report. The report computes the average item cost for the specified period based on the monthly opening balance last receipt cost. It will compare the computed average item cost with the current monthly opening balance average cost and display the percent increase or decrease change. The report includes the item master number, description, NSN (for Warehouse), unit per issue, cumulative average cost, current month average item cost, and percent change. It will break out each month and year in the selected date range and display the last cost opening balance. The user will have the option to specify the date range which should be used in computing the average item cost. The user can also specify which items to display and to print only a summary of the report. If the user selects to print only a summary, the report will not break out each month and year on the report. The Warehouse can select specific NSNs to display and the report is sorted by NSN. The Primary and Secondary can select specific item master numbers to display, and the report is sorted by description. The Primary will have the option to select specific group categories to display; the report is sorted by group category and description.

Produces the Due-In Item Report showing the inventory point items which have outstanding transactions stored (in the inventory point) as due-ins. Includes the outstanding transaction, associated purchase order, vendor, estimated delivery date or partial numbers not received in, and the due-in quantity.

Note: The results of this report may not agree with the report generated by the option "Update Calculated Due-Ins/Outstanding Transactions" (see PRCP_DUEIN_CALCULATE/UPDATE), because the "Update" option report shows the *calculated* due-ins, not the *stored* due-ins. If the "Update" option is run and the update is performed, the "Due-In Item Report" option can be run again and will then agree with the "Update" report, since the "Update" option will store the calculated due-ins.

DESCR:

Use to print a report showing the calculated due-ins, or to update the inventory point with the calculated due-ins. The calculated due-ins are based on transactions (2237's) and purchase orders which have not been received in after a specified date. The date entered should represent the date the last transaction or purchase order was received in (probably no later than 6 to 9 months in the past). The report should be run before doing the update so the results can be verified first. The report will show a listing of the calculated due-ins compared to the total due-in quantity stored in the inventory point. If the due-ins disagree, the update should be performed.

Note: The report may not agree with the "Due-In Item Report" (see PRCP DUE-IN ITEM REPORT), since the "Due-In Item Report" uses the stored values and not the *calculated* values. The update will remove all due-ins stored in the inventory point and reset the due-ins to the newly calculated values.

DESCR:

Use to recalculate the due-outs from the Warehouse inventory point for issue book requests not posted. The due-out quantity is calculated from issue book request ordered after a specified date. The date selected should be the date the last issue book request has *not* been posted (probably 6 to 9 months in the past). All issue book request before the specified date will be made final and can no longer be selected for posting. The due-out quantity stored in the inventory point will be updated to the newly calculated due-out quantity. This option should be run at *night* since it will lock the transaction (2237) file, and Services will be unable to create *any* orders. After the option has calculated the due-outs, a report will print displaying the outstanding issue book request, line item numbers due-out, date of the request, primary inventory point making the request, and the outstanding due-out quantity.

| PRCP2 AUTOGENERATE SECONDARY | Auto-generate Orders | R |

ROUTINE: PRCPAGS0

DESCR:

Use this option to auto-generate a Secondary inventory point distribution order. The auto-generation will use the selected Primary distribution points (stored in the mandatory or suggested source field in the secondary) for selecting the items. When an item's available quantity (quantity on hand plus quantity due-in minus quantity due-out) falls below or equal to the standard reorder point, the item will be ordered. When an item's available quantity falls below or equal to the optional reorder point, the item will be ordered if there are other items for the same vendor which are being ordered due to the available quantity falling below the standard reorder point (if items only fall below the optional order point for a vendor, the order will not be generated). The quantity to order is the difference between the available quantity and the normal stock level. Conversion factors (primary to secondary), primary minimal issue quantity, and primary issue multiple also factor into the total quantity of an item to order.

At completion of auto-generation, a series of reports can be generated. Each item in the inventory point will appear on one of the reports. This will aid in determining why an item was or was not ordered.

6.5 Menu Listings

Menu items in the following tables may not appear on all menus, depending on security keys and user privileges. An indented menu text entry indicates that the option is not seen until the next higher level option is selected; the listings shown represent a fully-expanded menu. In each table, the menu text (that is, the text which appears on the user's screen) is shown, along with the option name (used only by IFCAP and not normally seen by the user).

The menus presented in this document are based on updates made in 2004 for the Legacy Software Shut Down (LSSD) project. In some cases, later updates were available and are used here.

Table 7.2. Exported Bulletins

| Bulletin Name | Purpose |
|------------------------------|--|
| PRCF FMS ADJUSTMENTS | Used to notify IRM users that the CCP message has been filed and the conversion reports are ready to be printed. |
| PRCF_850_BULLETIN | Used to notify the user of a successful completion of the OOR message. |
| PRCF_850_BULLETIN1 | Used to notify the user of an unsuccessful completion of the OOR message processing. |
| PRCH GPF | General post fund transaction return from Fiscal bulletin. |
| PRCHQ 843 UPDATE VENDOR INFO | Vendor supplied information updating addresses and socio- economic status for vendor already in file #440. |
| PRCHQ 864 ERROR | Reporting error during filing of 864 Message from vendor for an |
| | RFQ |
| PRCHQ 864 NORMAL | Reporting arrival of 864 Text Message for review. |
| PRCOEDI ACKNOWLEDGE | Receipt of a POA transaction |
| PRCP_ALL_ITEMS_QTY_UPDATE | alerts staff to the receipt to a QOH request. If |
| | any quantity discrepancies are found between the items in the supply station |
| | and those in the inventory point, they will be listed. |

| Bulletin Name | Purpose |
|---------------------------|---|
| PRCP_BAD_ACTIVITY | This bulletin alerts staff of problems in HL7 transactions that |
| | update a secondary inventory point with supply station activity. |
| | Problems include: item not on this inventory point, quantity is too large or too small, inventory point not in GIP. |
| PRCP_BAD_ITEM_QOH | This item will display when GIP receives a QOH response from the supply station containing an item not in file 441. |
| PRCP_BAD_ORDER | This bulletin alerts staff of refill activity that cannot be |
| | processed because the transaction information conflicts with system data or data requirements. |
| | Problems include: item not on the order specified, order not for the secondary specified, amount refilled inappropriate, HL7 transaction corrupted, order number specified is not in GIP |
| PRCP_BAD_QUERY | This message alerts users when a response to a quantity on hand query could not be processed by GIP. |
| PRCP_ITEM_NAME | Alerts staff in a secondary inventory point of item name |
| | discrepancies between the inventory point and the linked supply station. |
| PRCP_NO_REFILL | This bulletin alerts staff that a posted distribution order |
| | includes items that were not marked as refilled by the supply station. It is expected that staff will verify the correct refill amount for these items by creating another order of emergency or call-in to correct discrepancies resulting in both the primary and secondary inventory points. |
| PRCP_ORDER_NOT_GENERATED | This message alerts staff expecting an order to be autogenerated for an inventory point that the order was not generated. |
| PRCP_ORDER_PARTIALLY_LOST | This message will be sent to the secondary inventory point |
| | managers when a supply station has reported refills against a distribution order but has not completed it. The purpose of the message is to notify staff of possible inconsistencies in the on-hand quantity between the supply station and the secondary. |
| PRCP_QTY_MISMATCH | This bulletin will notify the secondary inventory staff of |
| | inventory inconsistencies between the inventory point and its associated supply station. Staff need to investigate these discrepancies and make the necessary adjustments. |
| PRCVUP | This bulletin will notify the FMS mail group that an entry in their VENDOR file has been updated by FMS. They will see both the original data and what has been changed. |

| Bulletin Name | Purpose |
|-----------------------|--|
| PRC_IFCAP_CHANGE | This bulletin will be used to notify users that there has been a change to a PO to allow updating the inventory point. |
| PRCV_AUDIT_FILE_ERROR | This bulletin will be used to notify users that there has been an error while processing a DynaMed-related data item. |

7.6 Mail Groups

Table 7.7. Mail Groups

| Mail Group Name | Purpose | |
|------------------------------|---|--|
| BCC | This mail group will be used to receive the electronic reception of the daily Purchase Card Bills as well as other daily, monthly, or quarterly messages from the vendor bank concerning the Purchase Card Program. | |
| EDP | This is the mail group for EDI error messages from the background transaction POA, Purchase Order Acknowledgement. | |
| FISCAL NOTIFICATION | This mail group is used to notify Fiscal when A&MM Service has changed the delivery date in a purchase order. This mail group is ALSO used to notify Fiscal when an amendment has been Pending Fiscal Action for 4 or more days. | |
| FMS | This is the mail group from FMS transactions in IFCAP | |
| ISM | This is the mail group for ISMS transactions to IFCAP | |
| LOG | This is the mail group for confirmation messages from Q-LOG. | |
| OGR AUSTIN MESSAGES | (unknown, possibly obsolete) | |
| OLP | This mail group will receive confirmation mail messages from the Austin Information Technology Center (AITC) postmaster for 1358 transaction messages sent by the IFCAP package to Domain Q-OLP.VA.GOV. This mail group supports the interface between IFCAP and the Online Certification System. | |
| PRC | Mail group for Q-PRC responses from Austin, Texas. | |
| PRC 1358 MONITORS | This mail group is to include staff designated to receive the 1358 Compliance Reports in order to monitor compliance of 1358 usage to policy | |
| PRCHQ FRQ | This mail group gets bulletins sent from vendors and filing errors. | |
| PRCPLO CLRS NOTIFICATIONS | This mail group will be used to alert staff of status updates and exceptions concerning processes related to the Clinical Logistics Report Server. The mail group will be exported with PRC*5.1*83 and the site will determine the members as advised by the Clinical Logistics Office. | |
| PRCV Audit File Alerts | This mail group will be used to alert staff of inconsistencies or problems IFCAP finds with the Audit File while processing RILs, 2237s and Purchase Orders. | |
| PRCV Item Vendor Edits | This mail group will be used to alert staff members who maintain the Item Master File and Vendor File when an error occurs during attempts to update the COTS inventory system. | |
| SUPPLY NOTIFICATION | This mail group is used to notify A&MM that an amendment is Pending Fiscal Action for 4 or more days. | |

7.7 Parameter Definitions

Table 7.8. Parameter Definitions

| Parameter Definition Name | Purpose |
|-------------------------------|---|
| PRC CLRS ADDRESS | Stores IP address or DNS Server name of the Clinical Logistics Report Server (CLRS) |
| PRC CLRS OUTLOOK MAILGROUP | Stores the name of the Microsoft Outlook mail group that should receive CLRS notifications |
| PRCPLO EXTRACT DIRECTORY | Stores the destination directory for host files generated during the CLRS data extractions. |
| PRC OLCS 1358 EXTRACT | This parameter holds the date/time that the job responsible for sending an initial extract of 1358 transactions to the Online Certification System (OLCS) finished running. |
| PRCPLO GREATER THAN RANGE | Stores the number of days to be used in connection with the Stock on Hand Report when that report evaluates stock levels retained greater than a certain given period. |
| PRCPLO INACTIVITY RANGE | Stores the number of days to be used for the inactive range for the Stock Status Report |
| PRCPLO PASSWORD | Stores the login password for the Clinical Logistics Report Server |
| PRCPLO REGIONAL ACQ CENTER | Stores the Regional Acquisition Center to group Purchase Order Transactions in the CLRS Procurement extract |
| PRCPLO REPORT RANGE | Stores the date range for the Day of Stock on Hand report |
| PRCPLO USER NAME | Stores the user login name for the Clinical Logistics Report Server |
| PRCV COTS INVENTORY | Identifies which COTS product is being utilized for the inventory management system at the site. Current values are 'NONE' and 'DYNAMED'. |

| | This is the application for the Send 2237 from IFCAP to eCMS. It has some setup parameters including the tag^routine reference for IFCAP to process the Application Acknowledgment coming back from eCMS. | |
| PRCHJ_IFCAP_2237_RETURN | RESPONSE LINK (OPTIONAL): PRCHJ_ECMS HL7 MESSAGE TYPE: OMN HL7 EVENT: O07 ACTION TAG: PARSE ACTION ROUTINE: PRCHJR01 HL7 VERSION: 2.5 Package File Link: IFCAP | |
| | Patch: PRC*5.1*167 | |
| | This is the receiving application for the Return 2237 to Accountable Officer, Return 2237 to Control Point, and the Cancel 2237 from eCMS messages. It has some setup parameters including the tag^routine reference for the software that will unload the HL7 message, validate, file data, and send the Application Acknowledgment back to eCMS. | |

Chapter 7. Other Exported Components

Chapter 8. Archiving and Purging

8.1 Introduction

The IFCAP Archive/Purge (PRCG) program (see Table 6.14. Option List (PRCG)) allows IRM, Fiscal, and A&MM to manage the size and availability of the dated records in the IFCAP database. The package allows the systematic identification, archival, and removal of documents from File 442 and associated files from the VistA database.

The basic unit of the package is the document. A document is defined as the key entry in File 442 (PO, 1358, etc.) and all associated records in that and other files (amendments, adjustments, receiving reports and 2237 requests). During the archive these individual records are assembled and written out to the archival media (tape/HFS file) in printable format. These files may then be converted to microfiche for storage/retrieval. Automatic reinsertion into the VistA database following purge is not available.

8.2 Overview of PurgeMaster

PurgeMaster is a utility designed to allow multiple processes to act on different aspects of a database simultaneously. In the past, record purging required a single job to process through and delete records one at a time. PurgeMaster allows the IRM service to determine the time and computing resources to be made available to the purge process. Some activities (for example, archiving) must be accomplished sequentially (that is, you can't write record two until record one is finished). Other activities can theoretically have multiple processes, with each chipping away at a portion of a job in parallel. The purging process fits this model very well. Up to three parallel purge processes appear to run efficiently.

This utility is designed to provide purging functionality in the background. While PurgeMaster can be invoked during the day to process with only one job, it is best used processing 3-5 background jobs during off-hours.

TaskManager normally initiates PurgeMaster on a daily basis. It monitors the IFCAP PURGEMASTER WORKLIST file (File 443.1) to determine if "killer" jobs need to be spawned to process transactions. The IFCAP PURGEMASTER WORKLIST file (File 443.1) gets entries by manual interaction of user personnel.

8.3 Technical Information

8.3.1 Namespace

The IFCAP Archive/Purge routines are contained in the namespace PRCG.

8.3.2 Sizing Requirements

The Host file or MailMan disk space required for archiving appears to be about 40k per document actually archived. No real space is required when archiving to tape.

8.3.3 System Failure during Archiving or Purging

If the system fails during archive, recreate the archive tape; if during purge, restart the job.

8.3.4 Associated Files

| 443.2 | IFCAP PURGE PARAMETERS | VOLUME SET:CPU(B) | Contains the information about how many purge jobs should run and when and where. |
| 443.3 | IFCAP PURGE INPROCESS | | This file is a temporary repository for transactions being processed by PurgeMaster. In the event of a system failure, these entries are restored into the PurgeMaster Worklist file. |
| 443.9 | IFCAP PENDING ARCHIVE | PO NAME(AC), PO NUMBER(AD), PO NUMBER(B) | This file is a local Archive/Purge file that documents what records are pending archive. |

8.3.5 File Security Codes

There are no file security codes.

8.4 Options

Any user with appropriate menus can run Archive/Purge. Because the archive writes to devices not normally accessed by non-IRM users, however, the expected user is an IRM employee working closely with the IFCAP Application Coordinator. Set-up of IFCAP Archive/Purge parameters is the responsibility of IRM. Coordination and approval for archive/purge is the responsibility of Fiscal/A&MM employees with the actual implementation being undertaken by IRM. The IRM user must be designated as an Authorized Fiscal User for at least one site and FISCAL ACCOUNTING AUTOMATED (Field 22 of File 411) must be set to YES.

8.5 How PurgeMaster Works

When activated, the option PRCG PURGEMASTER (TASKMANAGER) does several things. First, it looks at the IFCAP PURGEMASTER WORKLIST file (File 443.1) for actions to be accomplished. If there are none, it merely quits. It will reactivate when scheduled (preferably daily). If there are entries in File 443.1, PurgeMaster then gathers site parameter information from the IFCAP PURGE PARAMETERS file (File 443.2) and spawns, through TaskManager, the appropriate number of sub-managers (killer jobs) on the appropriate computing systems (CPUs).

When activated, each sub-manager takes a job entry from File 443.1 and processes it to completion. Note that each entry in File 443.1 may actually contain several hundred individual records that are to be processed and/or purged. When that job is completed, the sub-manager evaluates the site parameters to determine if it is permitted to take another job from File 443.1. These parameters include current time, daily stop time and the day of week. In this way the sub-managers continue until File 443.1 is empty or the quit time specified has been reached. For instance, the development site may start PurgeMaster each day at 9:00 PM and specify that it cannot run past 11:30 PM.

8.6 Suggested Order for Archive/Purge Menu Options

Here is the suggested order for running the Archive/Purge menu options. Each step should be allowed to run to completion before beginning the next step.

8.6.1 Executing a Complete Archive/Purge

(1) Find Archivable IFCAP Records

- (2) Archive Selected IFCAP Records
- (3) Load Archived IFCAP Documents into PurgeMaster
- (4) Allow PurgeMaster to run
- (5) Load IFCAP File 442 Documents into PurgeMaster
- (6) Allow PurgeMaster to run
- (7) Load IFCAP File 410 Documents into PurgeMaster
- (8) Allow PurgeMaster to run

8.6.2 Executing Only the Menu Option Installed by Patch PRC*5*237

- (1) Load IFCAP File 442 Documents into PurgeMaster
- (2) Allow PurgeMaster to run

8.6.3 Executing Only the Menu Option Installed by Patch PRC*5*238:

- (1) Load IFCAP File 410 Documents into PurgeMaster
- (2) Allow PurgeMaster to run

8.7 Using Archive/Purge

Before using the Archive/Purge options...

- You must be an Authorized Fiscal User for at least one site
- FISCAL ACCOUNTING AUTOMATED (Field 22 of File 411) must be set to YES. (If not, contact your Site Manager or Application Coordinator.)

Prior to initiating an archive, File 443.9 should be empty. Check the status of any existing records prior to deleting them from the file.

8.7.1 Edit PurgeMaster Site Edit

The PRCG PURGEMASTER SITE EDIT option must be completed to establish the parameters to be utilized by PurgeMaster. Failure to establish site parameters with at least one computer processing unit (CPU) designated with at least one sub-manager job will prevent any purging from occurring. The responses shown below are only an example; each site should respond according to its own individual circumstances.

```
Select IFCAP Archive/Purge Master Menu Option: edit PurgeMaster Site Parameters
Select IFCAP PURGE PARAMETERS ID NUMBER: 1

8.7.2 Find Archivable IFCAP Records

Implementation follows the FIND, ARCHIVE, and PURGE model as seen in the Pharmacy package. The PRCG ARCHIVE FIND option searches all records, up through and including the fiscal year requested, and determines an appropriate archive status for each record, which is entered into the IFCAP PENDING ARCHIVE file (File 443.9).

Table 8.5. Archive Status

| Status | Assigned to |
|-----------------|--|
| ARCHIVE ONLY | Records which, as of the current date, have not yet been marked as completed |
| PURGE ONLY | Incomplete or invalid records which never became official documents |

```

Notes:

- 1. The system extracts and uses only the year from the date you enter.
- 2. At this point, only a list of possible records to archive exists. If an incorrect year was entered, either use FileMan options to delete the list (preferred method) or rerun the option (much slower—hours vs. seconds).
- 3. This option, and the remaining options, asks for a STATION NUMBER. The Archive/Purge process can only be run for one station at a time. Therefore, if a site has more than one station to be archived or purged, the process must be run to completion for each station separately.
- 4. All the Archive/Purge options that prompt for a device should be output to the user's terminal to facilitate the display of the graph which show percent of completeness. The only exception to this is the Archive Selected IFCAP Records option which *must* be output to the appropriate media as described in paragraph 8.7.4.

8.7.3 Review Pending Archive Transactions

Once the Archivable records have been found using the PRCG ARCHIVE FIND option, it is highly recommended that the facility review the transactions listed in the IFCAP PENDING ARCHIVE file (File 443.9) and update the archive status of an individual document, if necessary. For example, it is highly unlikely that documents created in the 1990s and still marked as not complete in IFCAP are valid documents requiring retention. It is much more likely that for some reason these documents were not marked as complete. Therefore, it would be appropriate to modify the status in the IFCAP PENDING ARCHIVE file (File 443.9) for these records to ARCHIVE & PURGE, thus allowing them to be removed following archive.

8.7.4 Archive Selected IFCAP Records

The PRCG ARCHIVE IFCAP RECORDS option writes the requested documents in document number sequence. Sites should be aware that, depending on the number of years selected for archive, this file could be very large. For this reason, it is highly advisable to archive only ONE year at a time. After the VMS file is written it can be moved to tape using standard VMS utilities. It is possible for ALPHA sites to write directly to tape; however, the time required increases.

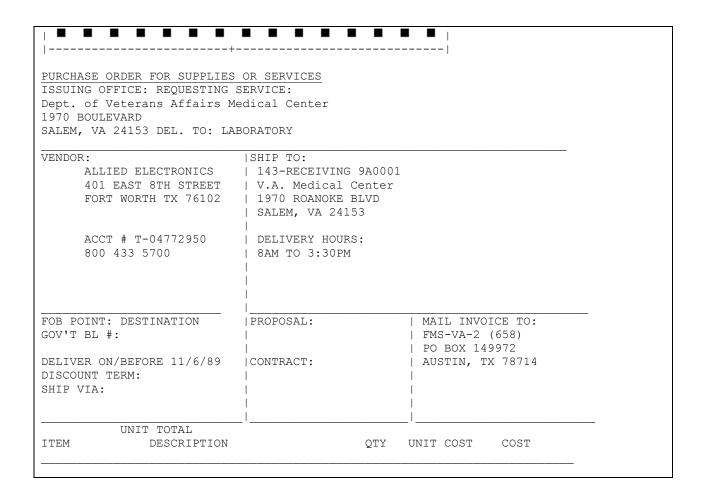

The Archive function of Archive/Purge is a single print job that does not consume a significant amount of resources on VMS or MSM-PC; consequently, it can easily be run on-line during normal working hours.

After the tapes are prepared, they can be converted to microfiche through a commercial vendor. Documents archived to Microfiche are indexed by Purchase Order (PO) Number and Vendor.

The suggested media and processes presented above are just a few examples of how the archiving portion of the archive/purge process may be performed. There are certainly other methods that can be used, such as creating a host file server device, which will prompt the user for the name of the host file to create. This file can then be transferred onto a compact disk (CD). For further reference to these processes, please see Chapter 18: Host File in the Kernel V.8.0 Systems Manual or consult the appropriate systems manual for your specific system (i.e. Caché, OpenM, Micronetics Standard MUMPS (MSM) and Digital Standard MUMPS (DSM) for additional details.

The following example shows the print job being sent to the user's terminal. *This is not an acceptable media for archiving*. It is only done here to show the format of an archived document.

Notes:

- 1. It is highly advisable to archive only **one** year at a time.
- 2. Enter the same fiscal year as the one entered in the PRCG ARCHIVE FIND option. This field date stamps the records with the last day (September 30) of the fiscal year entered. It does not select records for archiving.

8.7.5 Load Archived IFCAP Documents into PurgeMaster

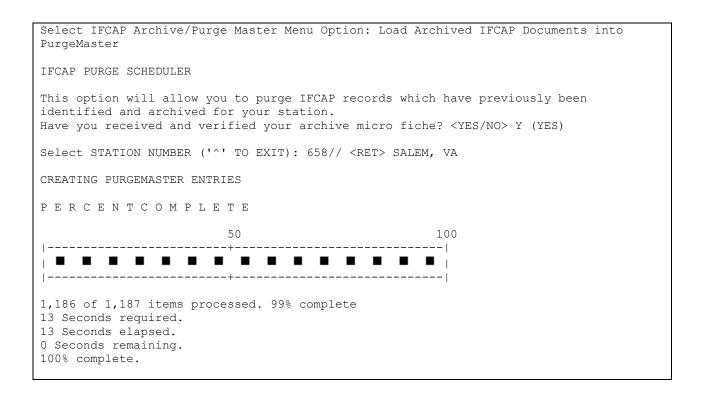

Removal of the documents is handled by the PurgeMaster utility. The PRCG LOAD PURGEMASTER option takes several minutes to run and schedules the documents in the IFCAP PENDING ARCHIVE file (#443.9) for processing.

Caution:

Entries that could be pointed to by Engineering, Prosthetics, or Drug Interaction files despite corresponding to a record in File 442 can be deleted during this step. What happens will depend on the status of the record:

- Archive: The record won't be deleted; it will just be saved to the Archive file.
- Purge: The record will be deleted and not archived.
- Archive & Purge: The record will be saved into the Archive file and will be deleted.

Notes:

If you answer "No" to the prompt, Have you received and verified your archive micro fiche? <YES/NO> you will get the following message:

I will allow you to purge records which have not been archived, but it is probably not a good idea to do so.

Are you sure you want to continue? NO//

Clarification: While the prompt literally asks if the user has verified the "archive micro fiche," in a general sense it is asking, "Did you archive the data you are about to purge and verify that it does exist on whatever media you archived it to?"

8.7.6 Load IFCAP File 442 Documents into PurgeMaster

The PRCG LOAD 442 PURGEMASTER option was created by patch PRC*5*237. Its purpose is to clean up the documents in File 442 that are missed by the Find Archivable IFCAP Records option, namely Accounts Receivable documents and those without a PO Date. This option may take several minutes to run, as it cycles through all of File 442 and creates entries directly in the IFCAP PURGEMASTER WORKLIST file (File 443.1). Documents found are not archived nor are they available for review.

Notes:

- 1. While any valid date, in any valid date format, may be entered at the DATE/FISCAL YEAR prompt, it is recommended that the user enter a fiscal year and allow the system to compute the last day of the fiscal year.
- 2. Due to the release of patch PRC*5*237, the menu option Archive Selected IFCAP Records was modified to archive Accounts Receivable documents, and PurgeMaster was modified to purge Accounts Receivable documents. As a result, users may see those types of documents get archived and purged at that time.

Select IFCAP Archive/Purge Master Menu Option: Load IFCAP File 442 Documents into PurgeMaster

This will schedule records in file 442 for review in the background by PurgeMaster (file 443.1 will be populated). Accounts Receivable documents in file 442 will be purged by PurgeMaster based on the date that you will enter. Any document in file 442 without a PO DATE will also be purged based on the date you enter and the date in the DATE PO ASSIGNED field in file 442. The date you are about to enter MUST be confirmed with A&MM or Fiscal staff. FAILURE TO DO SO MAY RESULT IN DATA CORRUPTION. Are you ready to continue? 8.7.7 Load IFCAP File 410 Documents into PurgeMaster

The PRCG LOAD 410 PURGEMASTER option was created by patch PRC*5*238. Its purpose is to clean up the documents in Files 410, 410.1 and 443 that are not found by the Find Archivable IFCAP Records option. Typically, these are records in file 410 that do not have a link to File 442, in addition to records in Files 410.1 and 443 that do not have a link to File 410. This option may take several minutes to run as it cycles through all of File 410 and creates entries directly in the IFCAP PURGEMASTER WORKLIST file (File 443.1). Documents found are not archived nor are they available for review.

Select IFCAP Archive/Purge Master Menu Option: Load IFCAP File 410 Documents into PurgeMaster

This will schedule records in files 410, 410.1 and 443 for review in the background by PurgeMaster (file 443.1 will be populated). Entries in file 410 will be purged first by PurgeMaster based on dates that you will enter. As data in file 410 is purged, related entries in file 410.1 are also purged. Entries in file 443 will be purged next if there is no corresponding entry in file 410. Finally, additional clean-up will be performed on file 410.1.

The dates you are about to enter MUST be confirmed with A&MM or Fiscal staff. FAILURE TO DO SO MAY RESULT IN DATA CORRUPTION.

- 1. Be aware that two dates are requested in this menu option. Ideally, the same response should be entered at both date prompts.
- 2. While any valid date, in any valid date format, may be entered at the DATE/FISCAL YEAR prompt, it is recommended that the user enter a fiscal year and allow the system to compute the last day of the fiscal year.

8.7.8 Clean Files 424/424.1 after purging

Routine PRCGF424 checks the 1358 DAILY RECORD (#424) file entries and 1358 AUTHORIZATION DETAIL (#424.1) file linked entries for the same Fiscal Year last digit, and archives and purges based on date (nine years or older). See 1-10 below for record purge types.

| Engineering | 319 | Routine ^PRCSP13 is called by Engineering in order to display control point activity | | | |
| Engineering | 1483 | Establishes a pointer to file # 420.8 SOURCE CODE | | | |
| Engineering | 1484 | Establishes a pointer to file # 420.1 COST CENTER | | | |
| Engineering | 1485 | Establishes a pointer to file # 441.2 FEDERAL SUPPLY CLASSIFICATION | | | |
| Engineering | 1497 | Establishes a pointer to file # 420.2 BUDGET OBJECT CODE | | | |
| Engineering | 1498 | Establishes a pointer to the Vendor file # 440 | | | |
| Engineering | 1499 | Allows read access to a number of fields in file # 442, descriptions of each field are present on the DBIA description | | | |
| Engineering | 1500 | Routine ^PRC0C is called at tag \$\$ACC | | | |
| Equipment Turn In Request | 1520 | Routine ^PRCFSITE is called in order to return the current fiscal year, zero node of the parameter file, user information, current fiscal quarter, and the site / station number | | | |
| Equipment Turn In Request | 1521 | Routine ^PRCSEB is called in order to determine the fund control point balance for the purpose of 2237 approval | | | |
| Equipment Turn In Request | 1522 | Routine ^PRCSUT is called from an input template in order to obtain 2237 information | | | |
| Equipment Turn In Request | 1523 | Routine ^PRCSUT3 is called when creating 2237's in order a record in file # 410 and process all checks on a created 22 | | | |
| Equipment Turn In Request | 1524 | Allows access to file # 410 in order to create / edit 2237's, als include the addition of two templates to file # 410 (PRCN2237 and PRCN2237E) | | | |
| Equipment Turn In Request | 1525 | Grants read access to the .01 field (Name) in file # 440 | | | |
| Equipment Turn In Request | 1549 | Allows read access to the .01 field (Station Number) in file # 411 | | | |

| Subscribing Package | DBIA# | Overview | | | | |
|---------------------------|-------|---|--|--|--|--|
| Equipment Turn In Request | 1550 | Allows read access to the .01 field (Name) in file # 410.2 | | | | |
| Equipment Turn In Request | 1551 | Allows read access to the .01 field (Name) in file # 410.7 | | | | |
| Equipment Turn In Request | 1552 | Routine ^PRCUESIG is called in order to check for electronic signature code | | | | |
| Event Capture | 492 | Read access to the Cost Center file # 420.1 for the purpose of processing for DMMS units | | | | |
| Fee Basis | 43 | Allows a call to global ^PRCFSITE | | | | |
| Fee Basis | 315 | Routine ^PRCS58 is called by Fee Basis in several areas for utility reads, specific descriptions are on the DBIA description | | | | |
| Fee Basis | 831 | Routine ^PRCS58CC is called by Fee Basis | | | | |
| Fee Basis | 832 | Routine ^PRCSUT31 is called by Fee Basis at tag EN1 | | | | |
| Fee Basis | 2071 | Establishes pointers to several fields in file # 420.6 CODE INDEX | | | | |
| Fee Basis | 5573 | Allows a subscriber to call API: UOKCERT^PRCEMOA. This API verifies that a person would not violate segregation of duty when certifying an invoice associated with a 1358 obligation by ensuring that they have not previously acted as a requestor, approving official, or obligator on that 1358. | | | | |
| Fee Basis | 5574 | Allows a subscriber to call API: \$\$EV1358^PRCEMOA. The API provides information on the events (initial obligation and increase/decrease adjustments) and IFCAP actors (requestor, approving official, obligator) for a specified 1358. | | | | |
| Integrated Billing | 127 | Adds a charge a patient account via routine ^PRCASER | | | | |
| Integrated Billing | 353 | A short description from the item master file is pulled by reading through routine ^PRCPUX1 | | | | |
| Integrated Billing | 593 | Routine ^PRCASER1 makes several read calls into file # 430, the Accounts Receivable file | | | | |
| Integrated Billing | 594 | Allows read access to files # 430.2 and # 350.1 from a post initialization routine | | | | |
| Integrated Billing | 595 | Allows a lookup into file # 430 as part of an option to print by Charge ID (bill number) | | | | |
| Integrated Billing | 596 | A blanket DBIA for the export of a number of files, functions, options, routines, templates, and security keys for version 1.0 of Integrated Billing | | | | |
| Integrated Billing | 597 | Continuation of DBIA 596 to cover updated pointer values for a post initialization routine | | | | |
| Integrated Billing | 598 | Allows write access to global ^PRC(412,) in order to set the Statement Day field as part of a post initialization routine | | | | |
| Integrated Billing | 599 | Direct reference to global ^PRCA(430.6,) to determine and set pointer values in the Accounts Receivable Category file and in the IB Action Type file in a post initialization routine | | | | |

| Subscribing Package | DBIA# | Overview | | | |
|--------------------------|-------|---|--|--|--|
| Integrated Billing | 600 | Direct reference to global ^PRCA(430.3,) to determine the internal number for increase or decrease adjustment type, this is required for input to a supported call in routine ^PRCASER1 | | | |
| Integrated Patient Funds | 2005 | Routine ^PRCGPM1 is called at tag ADD by routines ^PRPFPURG and ^PRPFSCV2 | | | |
| Library | 988 | Access granted to file # 440 | | | |
| MCCR Back billing | 54 | Exported routine ^PRCASVC3 makes calls to IFCAP routines ^PRCAUT2, ^PRCALST, ^PRCASVC1, and ^PRCASVC | | | |
| Pharmacy Benefits Mgmt. | 1020 | Allows read access to a number of fields in file # 442 | | | |
| Pharmacy Benefits Mgmt. | 1021 | Allows read access to the DISPENSING UNIT and DISPENSING UNIT CONV fields in file # 445 | | | |
| Pharmacy Benefits Mgmt. | 1022 | Allows read access to the UNIT OF PURCHASE field in file # 420.5 | | | |
| Pharmacy Benefits Mgmt. | 2345 | Allows read access to field 4 (Inventory Distribution) in file # 410 | | | |
| Pharmacy Benefits Mgmt. | 2409 | Allows read access to the .01 field (Transaction Number file # 410 | | | |
| Pharmacy Benefits Mgmt. | 2606 | Allows read access to the .01 field (Name) in file # 440 | | | |
| Pharmacy, Mental Health | 89 | Covers read access for File 411, Admin. Activity Site Parameter | | | |
| Prosthetics | 141 | Allows routine ^PRCSDIC to perform a lookup into file 410 | | | |
| Prosthetics | 227 | Allows Prosthetics package read only access to 4 separate elements of file # 445 | | | |
| Prosthetics | 282 | Routine ^PRCS58 is called by Prosthetics to check for fund control point user authorization access | | | |
| Prosthetics | 318 | Routine ^PRCS58 is called by Prosthetics in several areas for utility reads, specific descriptions are on the DBIA description | | | |
| Prosthetics | 375 | Allows for several reads from file # 424 as a result of patch RMRP*2*4 | | | |
| Prosthetics | 376 | Allows for reads from file #442.3 to check if the procurement and accounting transaction has been completed | | | |
| Prosthetics | 377 | Continuation of DBIA 375 extending access to file # 424.1 | | | |
| Prosthetics | 378 | Continuation of DBIA 375 which allows for updating of field # 96 in file # 442, the Estimated 1358 Balance | | | |
| Prosthetics | 390 | Continuation of DBIA 375 extending read access to the Primary 2237 and Supply Status fields of file # 442 | | | |
| Prosthetics | 698 | Read access to the .01 field of file # 445 to get the IEN of the Inventory Point | | | |

| Subscribing Package | DBIA# | Overview | | | |
|---------------------|-------|--|--|--|--|
| Prosthetics | 704 | Allows read access to fields # 94 and 96 in file # 442 in order to determine the amount remaining on an original 1358 obligation | | | |
| Prosthetics | 797 | Access granted to tags EN1 and EN2 in routine ^PRCS58 | | | |
| Prosthetics | 798 | Access granted to routine ^PRCS58CC in order to support the close / complete action on a 1358 daily record | | | |
| Prosthetics | 799 | Read access to file # 420.5, Unit of Issue field | | | |
| Prosthetics | 800 | Grants read, write, and LAYGO access to files # 440 and through options PRCHPC ITEM EDIT and PRCHRC VIEDIT | | | |
| Prosthetics | 801 | Continuation of DBIA 801 which expands field accessed | | | |
| Prosthetics | 802 | Grants read access to file # 410 in order to check the status of 2237's | | | |
| Prosthetics | 803 | Grants read access to file #442 in order to get the obligation number | | | |
| Prosthetics | 2135 | Routine ^PRCFSITE is called in order to set several IFCAP related variables used by the Prosthetics package | | | |
| Prosthetics | 2897 | Routine ^PRCH7D is called by the Prosthetics package to used as an interface to the Administrative Home Oxygen Module in order to add, edit, and obligate purchase card transactions | | | |

9.2 IFCAP Subscribing Database Integration Agreements Summary

IFCAP is the subscribing package for the following Database Integration Agreements (DBIAs) . This list is sorted first by Custodial Package name, then by DBIA reference number. For more detailed information on any of these agreements, please refer to the Integration Agreements options in FORUM.

Table 9.2. IFCAP Subscribing DBIAs

| Custodial Package | DBIA# | Overview |
|---------------------|-------|--|
| Accounts Receivable | 283 | The electronic signature (E-Sig) encode created by IFCAP 4.0 will work with AR version 3.7 code sheet creator |
| Accounts Receivable | | Procurement & Accounting transaction file 442 Debtor Field 5.1 (1;16) points to the AR Debtor File 340 Purchase Order Number Field .01 (0;1) |
| Fee Basis | | IFCAP will be using a function call in routine ^FBAAUTL3 to determine the header for FEE code sheets |

| Custodial Package | DBIA# | Overview | | | |
|--------------------|-------|--|--|--|--|
| Generic Code Sheet | 1108 | Covers a routine used by IFCAP/AR and Engineering to build and transmit FMS code sheets, info on routine ^GECSUFMS is in the Generic Code Sheet Manual | | | |
| Generic Code Sheet | 1114 | Covers a routine used by IFCAP/AR and Engineering to build and transmit FMS code sheets, info on routine ^GECSUFM1 is in the Generic Code Sheet Manual | | | |
| Generic Code Sheet | 1115 | Covers a routine used by IFCAP/AR and Engineering to build and transmit FMS code sheets, info on routine ^GECSSTAA is in the Generic Code Sheet Manual | | | |
| Generic Code Sheet | 1116 | Covers a routine used by IFCAP/AR and Engineering to build and transmit FMS code sheets, info on routine ^GECSSDCT is in the Generic Code Sheet Manual | | | |
| Generic Code Sheet | 1117 | Covers a routine used by IFCAP/AR and Engineering to build and transmit FMS code sheets, info on routine ^GECSSGET is in the Generic Code Sheet Manual | | | |
| Generic Code Sheet | 1197 | Allows calls from Generic Code Sheets 2.0 to IFCAP routine ^PRCSUTCP from within input templates, the calls will return fund control point information used to build FMS code sheets | | | |
| Generic Code Sheet | 1198 | Allows calls from Generic Code Sheets 2.0 to IFCAP routine ^PRCSUT from within input templates, the calls will return fund control point information used to build FMS code sheets | | | |
| Generic Code Sheet | 1199 | Allows calls from Generic Code Sheets 2.0 to IFCAP routine ^PRCOC from within input templates, the calls will return fund control point information used to build FMS code sheets | | | |
| Kernel | 119 | IFCAP uses a function in routine ^PRCFQ to determine if Taskman is running | | | |
| Kernel | 978 | Allows IFCAP to lookup data in the Terminal Type File # 3.5 through direct global references | | | |
| Kernel | 1867 | Adds two fields to File 200 : Commercial Phone (.135) and Supply Employee (400) | | | |
| MailMan | 3779 | Allows IFCAP to do a read with FileMan on the NAME (#.01) field in the DOMAIN (#4.2) file. | | | |
| Surgery | 990 | Allows IFCAP calls to several fields in the global ^SRF | | | |
| Surgery | 991 | Allows IFCAP calls to the Name field in global ^SRO | | | |
| Surgery | 992 | Routine ^PRCPCSOR calls routine ^SROPS to lookup the patient and scheduled operation information | | | |
| VA FileMan | 262 | FileMan v19.0 local variable D1 is allowed for use by IFCAI v4.0 in input template PRCFA TT982.00 which deletes the variable after use | | | |
| VA FileMan | 510 | Allows read access to globals ^DISV(DUZ,"PRCProutine name", and ^DISV(DUZ,globalnode, and allows write access to global ^DISV(DUZ,"PRCProutine" | | | |

| Custodial Package | DBIA# | Overview |
|-------------------|-------|---|
| VA FileMan | | Covers direct M kills of erroneous DD nodes during the install of IFCAP v5.0 and GIP v5.0 |
| VA FileMan | 1540 | For patch PRC*5*69 changes to the ID display |
| VA FileMan | | Allows a recursive call to global ^DIE from the IFCAP Purchase Order templates |

Figure 10.1. Memo, SAC Exemption for IFCAP

Date: September 13, 2000

From: Mark Warner, Director, Financial Management Systems, Technical Services

To: Dan Bishop, ACIO, Technical Services

Thru: Roy Baker Chairperson, Program Management Board

Subj: SAC Exemption for IFCAP

The IFCAP Development team requested a SAC exemption from the standards requiring incremental locks with timeouts in preparation for the planned release of IFCAP v5.1 scheduled for 10/20/00. IFCAP v5.0 was given an exemption in 1995 and approximately 40% of the instances were fixed in the interim. During this period there were no known instances of database corruption or... [degradation] due to not having incremental locks with timeouts in place. The SACC reviewed this exemption request in June and based on its technical merits they denied the exemption. This memorandum is for the purpose of requesting an override of the exemption denial.

IFCAP v.51 has been developed in preparation for its replacement by CoreFLS. This version was developed with the intent of returning all sites to the same baseline of IFCAP. No new functionality has been included which hasn't previously been released in a patch. On a separate path, CoreFLS is schedule to begin testing in May 2001 with full implementation to be completed by 10/12/2002. Admittedly this is an extremely aggressive timeline and unlikely to be met, but we need to continue moving forward under this schedule until such time as the timeline is adjusted. To add the remaining incremental locks would delay the release of the IFCAP v5.1 until the Spring 2001. This would further jeopardize the CoreFLS schedule as staff targeted to work on preparing for the integration and conversion to CoreFLS would need to focus on correcting the locks.

Based on the fact that IFCAP is slated for replacement in two years, CoreFLS is on a very aggressive time schedule and there have been no negative consequences from not fixing the incremental lock problem previously, we requested ... the PMB make a recommendation to override the exemption. The PMB discussed this issue on their 0/11/00 conference call and the group agreed to recommend an override of the exemption. We do agree that if the CoreFLS project is stopped for any reason, we will assign maintenance team resources to address the remaining incremental locks.

The above figure shows the text of an official Department of Veterans Affairs memorandum that was signed and approved by both Roy Baker and Dan Bishop.

Greg,

What is the status of Vic's request for SAC Exemption to be able to build strings longer than 255 characters, which I recall he is doing in the RIL interface?

Subject: Request for exemption for SAC standard on variable length for Patch PRC*5.1*81

Greg,

... I would like to submit a request for an exemption for patch PRC*5.1*81 for the routines that read in a requisition request from DynaMed and produce an HL7 Message to be passed to IFCAP. This request is presented because of the shortened timeframe to produce a programmatic workaround and the size limit to the message segments as they are currently constructed for this project task.

The current standard limits a variable to 245 characters. I would like to be able to read in an HL7 segment and assign it to a single variable in ^PRCVRE1. In order to do this, I will require an exemption from that standard that sets a maximum field length of 245 based on the following:

1 The HL7 message that is built for this task consists of four distinct segments: MSH, ORC, RQD and RQ1. Other than the MSH segment, the segments in the messages are reasonably expected not to exceed the 245 character limit, as described below. The MSH segment length is not an issue in this routine as the segment itself is never evaluated, nor are any of the fields within the segment used, other than as they are presented in the HL array. The code interprets the first three characters of the segment, and if the type is MSH, the segment is ignored.

- 2. The ORC segment consists of 21 possible fields. However, only 6 of them are expected to have non-blank data in them. Thus the fewest number of characters that are expected is 21. One for each of the field separators. The maximum length is dictated by the expected field definitions as follows:
- 2a. ORC-1 This is a two character field containing "NW"
- 2b. ORC-3 This is a numeric field for Fund Control Point with a max length of 4
- 2c. ORC-9 This is a standard date and time stamp with a fixed length of 19
- 2d ORC-10 This is a 4 component field consisting of DUZ for a length of 6 characters, Family Name with a Maximum length from DynaMed of 40 characters, a Given name with a maximum length from DynaMed of 20 characters, and a site code with a length of 4 characters.
- 2e. ORC-17 This is a standard length for a cost center with a max length of 8 characters
- 2f ORC-121 This is the site number with a maximum length of 4 characters

Therefore the ORC segment will be at a maximum 132 characters (21+2+4+19+6+40+20+4+8+4 plus 4 sub-component characters)

- 3. The RQD segment consists of 10 possible fields. However, only 5 of them are expected to have non-blank data in them. Thus the fewest number of characters that are expected is 10, one for each field separator. The maximum length is dictated by the expected field definitions as follows:
- 3a. RQD-1 Item counter. This is a record counter expected to be no more than 4 digits in length.
- 3b. RQD-2 Document ID. This is a 16 digit field defined by DynaMed
- 3c. RQD-3 Item number. This is a 6 digit number greater than 99999
- 3d RQD-5 Quantity. This is defined by DynaMed as a 9 digit number, including the decimal point
- 3e RQD-10 Date needed. This is a formatted date of 8 characters.

Therefore the RQD segment will be at a maximum 53 characters (10+4+16+6+9+8)

- 4. The RQ1 segment consists of 5 possible fields. However, only 4 of them are expected to have non-blank data in them. Thus the fewest number of characters that are expected is 5, one for each field separator. The maximum length is dictated by the expected field definitions as follows:
- 4a. RQ1-1 Unit cost. Specified in IFCAP as 12 characters including the decimal point
- 4b. RQ1-3 Budget Office Code. This is set at 6 characters
- 4c. RQ1-4 Vendor pointer. This is set at 6 characters in IFCAP
- 4d. RQ1=5 NIF item number This is set at 10 digits as a maximum for DynaMed.

Therefore the RQ1 segment will be a maximum of 39 characters (5+12+6+6+10)

As the reasonable expectation that none of the used segments will be greater than 245 characters long, I would like to request an exemption from the SAC standard so that I can put each segment into a single field.

Subject: SAC Exemption Request- IFCAP to New DUZ in Background Filer

Dear SAC Committee,

As part of IFCAP patch PRC*5.1*81 (DynaMed Interface for Bay Pines VAMC), an HL7 interface is being developed that will enable IFCAP Fund Control Point balances and FMS General Ledger balances to be updated on the basis of inventory Issue Book posting and warehouse inventory balance adjustments performed in the COTS inventory package DynaMed.

The

DUZ value of the DynaMed user performing the Issue Book posting or adjustment will be sent to IFCAP so that the appropriate control point activity and Generic Code Sheet transactions can be set up. In setting up the control point activity transactions, the user's DUZ must be filed for audit and database integrity purposes. We have subscribed to DBIA #4129 to enable us to change the DUZ array values in the symbol table, but we would like a SAC exemption to enable us to New the DUZ array prior to altering its values so that at the end of the filing when the called API quits, the new DUZ values would be popped from the stack and any initial values would be restored, prior to execution control being returned to the

HL7 package's code. Thus the new values would not persist in the symbol table processing subsequent HL7 messages.

For further clarification, I have attached the correspondence concerning our DBIA request. I have noted that both Integrated Billing and Laboratory Service, who are using this DBIA, also sought a SAC exemption

for altering DUZ.

Original message: "DBIA #4129:INVOKE DUZ~XUP - IFCAP request to be a subscriber" [#40547348]

From: GREENE,LYFORD Sent: 03/31/05@15:17

Cameron/Kernel Developers,

In a new patch PRC*5.1*81 (DynaMed Interface for Bay Pines VAMC) an interface is being developed to create financial documents in IFCAP and subsequently in the Financial Management System (FMS) based on warehouse sales to other inventory points taking place in the DynaMed COTS inventory system. Existing IFCAP APIs will be invoked in background to set up the Control Point Activity (file #410) records that currently are created during interactive issue book entry and posting functions in IFCAP for sites using IFCAP's Generic Inventory Package (GIP) module.

Some of these APIs are coded to use the variable DUZ, which would normally be setup when the user signs onto the VistA system. In the DynaMed/IFCAP interface, the user will be identified by the VistA DUZ value transmitted from DynaMed to IFCAP in an HL7 message. For proper filing, this background process needs DUZ to be initialized to the passed user id. I note, however, that section 2.3.1.4 of the VA Standards and Conventions states "VistA packages are not allowed to KILL, NEW, SET, MERGE, READ (into) or otherwise modify the variable DUZ or any DUZ array element. (Exemptions:

Kernel and VA FileMan)"

I also note that there is an active, controlled subscription DBIA #4129 INVOKE DUZ~XUP, that provides the DUZ^XUP(DA) API for approved packages to initialize DUZ. The example was for another

background task, that needed to specify a particular DUZ to be used.

IFCAP would like to subscribe to DBIA #4129 for patch PRC*5.1*81 DynaMed/IFCAP HL7 interfaces.

Response #1: SCHLEHUBER, CAMERON 03/31/05@23:29

OK kernel folks?

Response #2: SCHRAM, JACK D 04/04/05@13:03

Okay.

Response #3: SCHLEHUBER, CAMERON 04/04/05@13:14

I've added IFCAP to IA 4129.

Response #4: GREENE, LYFORD 04/04/05@22:09

Thank you.

Cameron et al.,

With regards to use, are current subscribers of this DBIA Newing DUZ and then setting to the required values via DUZ^XUP so that when the application execution is completed the stack is popped and any prior value of DUZ is restored, thereby leaving the symbol table as it was before?

Alternately, are they setting DUZ via DUZ^XUP and just before the application ends, Killing DUZ to remove the altered value and thus leaving DUZ undefined? Our software will be invoked when the HL7 package receives an incoming message for our protocol.

Response #5: SCHLEHUBER, CAMERON 04/05/05@21:47

DUZ should never, ever be left undefined. I don't know about the other issues.

11.1 Arrays and Package-Wide Variables

1 STANDARD SECTION: 4B Package-wide variables DATE GRANTED:

The PRC-array is a package-wide variable for use within IFCAP.

The following package-wide variables are usually set up via a call to PRCFSITE or PRCSUT*:

PRC("BBFY") = Beginning budget fiscal year

PRC("CP") = Control point number and name

PRC("FU") = 1 => implies user is NOT a fiscal user

PRC("FY") = 2 digit current fiscal year

PRC("I") = primary station number

PRC("L") = count of stations for which user is authorized

PRC("L", site) = array of station numbers for which user is an authorized fiscal user

PRC("MDIV") = 1=> Fiscal accounting automated means accounting module of IFCAP is operating

PRC("PARAM") = Site parameters from ^PRC(411,Site,0)

PRC("PER") = String of data about user as:

DUZ^Signature Block Printed Name^Signature Block Title^Office Phone

PRC("QTR") = current fiscal quarter as 1, 2, 3 or 4

PRC("SITE") = Site or station number (usually 3 digits)

PRC("SST") = Substation number

 $PRC("SP") = 1 \Rightarrow implies user is a supply employee$

PRCB("LAST") = Last transaction number

PRCF("SIFY") = Site - FY

PRCF("X") = String to control what prompts are displayed during the call to PRCFSITE

[if PRCF("X") is not set, "AFS" is assumed]

[Standard variables DT, PRC("FY"), PRC("MDIV"), PRC("PER"),

PRC("QTR"),PRC("SP"), U are set regardless of control string]

A = Sets up standard variables and PRC("FU") without prompting

B = Prompts for station number and fiscal year and also sets up PRC("PARAM"),

F = Prompts for fiscal year and sets up standard variables

S = Prompts for station number and also sets up PRC("PARAM"), PRC("SITE")

Q = Prompts for quarter and sets up standard variables

PRCPSIP = Selected inventory point internal number

PRCS("SUB") = Sub control point name

PRCS("CC") = Cost Center number

PRCSC indicates which module user entered and is set by entry into options noted in []

1 => Control Point Official [PRCSCP OFFICIAL]

2 => Control Point Clerk [PRCSCP CLERK]

3 => Requestor [PRCSREQUESTOR]

PRCSERR error found by routine PRCSCK & from control point templates

PRCSK is flag to allow selection of any station, not just his own

PRCSST is flag to not ask substation

2 STANDARD SECTION: 4B Package-wide variables

DATE GRANTED: NOV 28,1989

The PRCP-array may be used as a package-wide variable in the IFCAP

Generic Inventory module of IFCAP.

The following system-wide variables are used in the GIP module:

PRCP("DPTYPE") = distribution point type code as W(arehouse), P(rimary) or S(econdary)

PRCP("HIS") = keep detailed history flag

PRCP("I") = internal number of inventory point

PRCP("IN") = name of inventory point without station number
PRCP("INV") = keep perpetual inventory flag

PRCPPRIV = If this flag is set, it indicates the user has access to modify GIP files. This is usually set and killed in user options, so it must be set in direct mode to edit files.

Financial Management System, which has replaced CALM as the primary accounting system for administrative appropriations. FMS has a comprehensive database that provides for flexible on-line and/or batch processing, ad-hoc reporting, interactive query capability and extensive security. FMS is concerned with budget execution, general ledger, funds control, accounts receivable, accounts payable and cost accounting.

FOB

Freight on Board. An FOB of "Destination" means that the vendor has included shipping costs in the invoice, and no shipping charges are due when the shipper arrives at the warehouse with the item. An FOB of "Origin" means that shipping charges are due to the shipper, and must be paid when the shipper arrives at the warehouse with the item.

FTEE

Full Time Employee Equivalent. An FTEE of 1 stands for 1 fiscal year of full-time employment. This number is used to measure workforces. A part-time employee that worked half days for a year would be assigned an FTEE of 0.5, as would a full-time employee that worked for half of a year.

Graphical User Interface A graphi

(GUI)

A graphical user interface (or GUI, often pronounced "gooey") is a graphical (rather than purely textual) user interface to a computer. A GUI is a particular case of user interface for interacting with a computer which employs graphical images and widgets in addition to text to represent the information and actions available to the user. Usually the actions are performed through direct manipulation of the graphical elements. A GUI takes advantage of the computer's graphics capabilities to make the program easier to use.

See also User Interface.

Justification A written explanation of why the Control Point requires

the items requested. Adequate justification must be given

if the goods are being requested from other than a

mandatory source.

Liquidation The amount of money on the invoice from the vendor for

the authorization. They are processed through

payment/invoice tracking.

Obligation Number The C-prefix number that Fiscal Service assigns to the

1358.

OLCS The Financial Services Center (FSC), located in Austin,

Texas, is a franchise fund (fee-for-service) organization in the Department of Veteran Affairs (VA). The On-Line Certification System (OLCS) operates within the FSC's Document Management System to allow Certifying Officials access to invoices via the intranet that require

certification.

On-Demand Item (ODI) Just-in-case items that are used infrequently at a site but

must still be tracked in Primary and Secondary inventory points for reporting. ODI items are separated from regular (Standard) items for reporting purposes so site

inventories are tracked more accurately for item usage.

On-Demand User A user of a specified inventory point who is authorized to

modify the On-Demand setting of items in that inventory

point.

Organization Code Accounting element functionally comparable to Cost

Center, but used to organize purchases by the budget that funded them, not the purposes for spending the funds.

PCard See Purchase Card.

PCLO See Prosthetics and Clinical Logistics Office.

Program Code Accounting element that identifies the VA initiative or

program that the purchase will support.

Prosthetics and Clinical Logistics Office (PCLO)

The Office of Prosthetics and Clinical Logistics at VHA.

Purchase Card (PC) A card that a Purchase Card User employs to make

purchases. Purchase Cards are not credit cards but debit cards that spend money out of a deposited balance of VA

funds.

Purchase Order (PO) A government document authorizing the purchase of the

goods or services at the terms indicated.

Purchasing Agents A&MM employees legally empowered to purchase

goods and services from commercial vendors.

Requestor See "Control Point Requestor."

Requisition An order from a Government vendor.

Service Balance The amount of money on the original 1358 and

any adjustments to that 1358 when created by that service in their Fund Control Point. This amount is reduced by any authorizations created by the service.

SF-18 Request for Quotation.

SF-30 Amendment of Solicitation/Modification of Contract.

Sort Order The order in which the budget categories will appear on

the budget distribution reports.

Standard Item See On-Demand Item for reference. Standard items are

items normally used in regular frequency in Primary and Secondary inventory points at sites. These items are separated from On-Demand items to provide more

accurate reporting of usage and reordering.

Sub-cost Center A subcategory of Cost Center. In IFCAP 5.1, the last two

digits of the cost center, if anything other than "00" will be the 'sub-cost center' that is sent to FMS. IFCAP will not use a 'sub-cost center' field, but will send FMS the last two digits of the cost center as the FMS 'sub-cost center' field, unless the last two digits of the cost center

are '00'.

TDA Transfer of Disbursing Authority. A sequential number

Central Office assigns to each funding it gives to your station. The first funding they give you in the fiscal year is TDA number 1, the second funding they give you is

TDA number 2, etc.

Total Authorizations

The total amount of the authorizations created for the 1358 obligation.

Total Liquidations

The total amount of the liquidation against the 1358 obligation.

Transaction Number

The number of the transaction that funded a Control Point (cf. Budget Analyst's User Guide)

User Interface

A user interface is the means by which people (the users) interact with a particular machine, device, computer program or other complex tool (the system).

The user interface provides one or more means of:

- Input, which allows the users to manipulate the system
- Output, which allows the system to produce the effects of the users' manipulation

The interface may be based strictly on text (as in the traditional "roll and scroll" IFCAP interface), or on both text and graphics.

In computer science and human-computer interaction, the user interface (of a computer program) refers to the graphical, textual and auditory information the program presents to the user, and the control sequences (such as keystrokes with the computer keyboard and movements of the computer mouse) the user employs to control the program.

Vendor file

An IFCAP file of vendors the facility does business with. Contains ordering and billing addresses, contract information, FPDS information and telephone numbers. File 440 contains information about the vendors that your station does business with. The debtor's address may be drawn from this file, but is maintained separately. If the desired vendor is not in the file, contact A&MM Service to have it added.

Windows

Windows® is a family of operating systems by Microsoft. These systems can run on several types of platforms such as servers, embedded devices and, most typically, on personal computers.

Windows XP is the current (as of December 2006) operating system for use on general-purpose computer systems, including home and business desktops, notebook computers, and media centers. The letters "XP" stand for experience. Source:

Appendix B. Routine Checksums

As of PRC*5.1*152, checksums are no longer listed in the IFCAP Technical Manual. Accurate checksums for routines changed and exported by a patch are listed in the Patch Description attached to the KIDS build for each patch. VistA maintenance personnel should be checking these numbers whenever the system is patched.

In the NPM user menu of FORUM the Routine Inquire option can be used to verify what the current checksum should be. For Example:

Appendix C. CLRS Reporting (Purchase Order Data)

This appendix details the structure of the flat files generated from the data extracted from the PROCUREMENT & ACCOUNTING TRANSACTIONS (#442) file. The table names refer to the resulting tables generated from importing the flat files into Microsoft® Access.
