Chapter 1: Introduction to TIU

Purpose of Text Integration Utilities

The purpose of Text Integration Utilities (TIU) is to simplify the access and use of clinical documents for both clinical and administrative VAMC personnel, by standardizing the way clinical documents are managed. In connection with Authorization/ Subscription Utility (ASU), a hospital can set up policies and practices for determining who is responsible or has the privilege for performing various actions on required VHA documents.

The initial release of Version 1.0 includes Discharge Summary and Progress Notes. Consult Reports was added with the release of Computerized Patient Record System (CPRS). TIU replaces and upgrades the previous versions of these *VISTA* packages. It has also been designed to meet the needs of other clinical applications that address document handling.

TIU allows you to continue to access Progress Notes and Discharge Summaries from OE/RR menus. The CPRS Graphical User Interface (GUI) allows point-and-click access to all Progress Notes, Discharge Summaries, and Consults TIU documents.

Benefits

a. Standardized and common user interface

Clinicians can go through the same program to enter, review, and sign discharge summaries, progress notes, and other clinical documents that may be set up locally for processing through TIU.

b. Integration

Clinicians and management can search for and retrieve clinical documents more efficiently because documents reside in a single location within the database. This is also a benefit for other uses such as Incomplete Record Tracking, quality management, results reporting, order checking, research, etc.

c. Data Capture Flexibility

TIU accepts document input from a variety of data capture methodologies. Those initially supported are transcription and direct entry. TIU allows upload of ASCII formatted documents into *VISTA*.

Benefits, cont'd

d. Links to Other Packages.

TIU interfaces, as appropriate, with such applications as Health Summary, Problem List, Patient Care Encounter/Visit Tracking, and Incomplete Record Tracking. Computerized Patient Record System (CPRS) further integrates *VISTA* packages and allows point and click switching between packages.

A new Health Summary component is available (through Patch GMTS*2.7*12), *Selected Progress Notes*, which allows selection of specific Progress Notes Titles for display on Health Summaries. The PN, DS, and CWAD components now extract data from TIU, rather than Progress Notes (GMRP), or Discharge Summary (GMRD). Care has been taken to assure that the formatting and content of the components have remained the same, except that the signature block information will now reflect the author's (and cosigner's) name and title at the time of signature, rather than displaying their current values at the time of output.

e. Improved management of Documents.

- TIU has a file structure called the Document Definition Hierarchy for defining elements and parameters of a document. It allows:
 - Inheritance of document characteristics, such as signing, cosigning, visit linkage, etc.
 - Site definition of document characteristics
 - Shared components
 - Ownership (personal or class) of document definitions
 - Boilerplate text functionality
 - Interdisciplinary Note functionality.
 - Embedded “Object” functionality which can extract data from other *VISTA* packages and insert it into boilerplate text

Recent Patches

Patch TIU*1*305 – Contingency Downtime Bookmark Progress Notes / Post-Signature Alerts

TIU*1.0*305 provides the following enhancements to *Vista*:

- Enables sites to add a progress note to the electronic record of all inpatients and outpatients who were seen during computer system downtime using the new option Contingency Downtime Bookmark Progress Notes [TIU DOWNTIME BOOKMARK PN] in the TIU Maintenance Menu [TIU IRM MAINTENANCE MENU]. The note must use a locally-approved title that has been mapped to the Veterans Health Administration (VHA) enterprise-standard COMPUTER DOWNTIME title. When creating the note, users can enter: the note title; whether the computer downtime was scheduled or unscheduled; outage start/end times; the author of the note; a date/time stamp to sequence the note in the note tree; clinics to which the outage applies; users to receive an email notification listing the patients affected and whether the note was successfully appended to each patient's record; an option to edit the TIU note text; and

an electronic signature to perform an administrative closure of the note to enter it into the medical record. The progress note states that a computer outage occurred, and alerts the user to search the patient's paper records for non-electronic documentation created during the outage. The set-up and note content should be coordinated with the Chief, Health Information Management at each site. Only one progress note is filed for any patient with multiple appointments (whether inpatient, outpatient, or both) at different clinics during the outage period.

The patch deletes a site's existing text in the BOILERPLATE TEXT field (#3) in the TIU DOCUMENT DEFINITION file (#8925.1) and replaces it with new standard TIU note text. This new text can be modified by users when creating downtime bookmark progress notes. The installation history for the patch will capture the data from the BOILERPLATE TEXT field so that local OIT personnel can retrieve the previous boilerplate text, if needed. The installation history can be reviewed using the Install File Print [XPD PRINT INSTALL FILE] option under the KIDS UTILITIES sub-menu.

- Enables clinicians and providers to create progress notes that automatically generate a post-signature alert to designated recipients based on the progress note title. The new option Create Post-Signature Alerts [TIUFPC CREATE POST-SIGNATURE] in the Document Definitions (Manager) [TIUF DOCUMENT DEFINITION MGR] menu allows Clinical Application Coordinators (CACs) or other supervisors to define who is alerted when a specific progress note title is used. The note title to define is selected at the "Select TIU DOCUMENT DEFINITION NAME:" prompt. The option then enables entry of the recipients to be notified (individual, mail group, or team list), whether to alert the Primary Care Provider, whether to print a chart copy at the patient's location, and to optionally select an output device for printing at another location. The notification is made through VistA Kernel Alerts and is sent to recipients immediately upon a clinician's entry of an electronic signature for the note.

Patch OR*3.0*420 – CPRS Lab Monitoring

Patch OR*3.0*420 modifies the Pharmacy package in VistA to display the most recent associated lab results when a clinician is ordering medication using the CPRS Inpatient or Outpatient Medication Order dialogs. The lab results for the most recent lab test associated with an Orderable Item are displayed in the Information field in the Medication Order dialog after an Orderable Item is selected. When a dispense drug is chosen (by selecting a dosage in the order dialog), the lab test information is replaced by the National Standard Drug Information found in the MESSAGE (#101) field of the DRUG (#50) file.

A CAC or ADPAC must set the OR CPRS LAB DISPLAY ENABLED parameter to ON to activate this functionality at a site.

To optionally apply this functionality to Quick Orders, create a TIU OBJECT from routine ORWDPLM2 using the TIU Document Definitions option and then insert it into the comments field of the Quick Order. Upon selection of the Quick Order in CPRS, the monitored LAB results will appear on the Ordering screen.

The object method to insert into the TIU OBJECT is:

```
S X=$SSL^ORWDPLM2(DFN,  
$S($G(X0)]"":$P(X0,U),$G(NODE0)]"":$P(NODE0,U),1:""),"^TMP($J,""ORWDPLM2  
""")"
```

The display is wrapped for ease of reading, but the object method must be entered as one single line.

Note: The TIU OBJECT method will work for generalized Quick Orders only (orders assigned to Order Menus). It is not currently implemented for personal Quick Orders.

Patch TIU*1*297 – TIU Unauthorized Abbreviation and Dictation Control

TIU*1*297 modifies the Text Integration Utilities (TIU) application. It introduces two new applications, TIU Unauthorized Abbreviation and TIU Dictation Control. It also contains a security privilege fix for TIU*1*296.

The TIU Unauthorized Abbreviation application searches and prevents misinterpretation of a patient's "CPRS – Progress Note" due to misuse of unauthorized abbreviation(s). See chapter 18, “Unauthorized Abbreviations.”

The TIU Dictation Control application introduces functionality to allow a facility to control TIU dictation privileges in CPRS. See section entitled “TIU Dictation Control” in chapter 3, “TIU for Clinicians.”

Patch TIU*1*291 – CWAD/Postings Auto-Demotion Setup

Patch TIU*1*291 introduces the new Crisis, Warnings, Allergies and/or Adverse Reactions, and Advance Directives (CWAD) notes auto-demotion functionality. CWAD is a section of CPRS used for posting progress notes, which are more important than standard level notes. These progress notes are made more easily available throughout CPRS. The postings dialog box can become full of CWAD notes, resulting in important notes from being easily distinguishable from less important notes. The requested enhancement is to demote previously designated notes from the CWAD postings to a regular note status based on various criteria, such as the passage of time or a newer note of a particular title being written which supersedes the existing CWAD note. This is accomplished by converting an existing Class III application to Class I.

Patch TIU*1*296 – TIU Text Alerts

Patch TIU*1*296 modifies the TIU application to send a TIU alert to the appropriate service provider(s) immediately after a staff member screens a patient and signs the associated note. The service provider(s) will be alerted prior to the note being co-signed by the licensed clinician responsible for reviewing and approving the note. Prior to this modification, TIU alerts were not sent to all service providers. This resulted in missed

opportunities to provide needed services for patients while the patients are on site, and forced staff to take time to contact patients and reschedule needed services.

This patch utilizes one new file (TIU TEXT EVENTS (#8925.71)) used to define the words or phrase that will be searched for in a TIU document (progress note, consult, etc.). If the words or phrase are found in the TIU document, then an alert is sent to the team(s) specified in the TIU TEXT EVENTS file.

A Text Event Edit [TIU TEXT EVENT EDIT] menu option was added to the TIU Maintenance Menu [TIU IRM MAINTENANCE MENU]. This option is used to set up a text event in the TIU TEXT EVENTS file.

Note: Any TIU document that is to be used to trigger these alerts must have the MUMPS code 'D TASK^TIUTIUS(DA)' entered in the POST-SIGNATURE CODE field (#4.9) in the TIU DOCUMENT DEFINITION file (#8925.1). This field can only be edited by IRM personnel.

TIU*1*263 – Changes for ICD-10

This patch is part of the Computerized Patient Records System CPRSv30 project. This project will modify the Computerized Patient Record System, Text Integration Utilities, Consults, Health Summary, Problem List, Clinical Reminders, and Order Entry/Results Reporting to meet the requirements proposed by the Dept. of Health and Human Services to adopt ICD-10 code set standards for Clinic Orders.

This patch makes all changes to TIU that are required to move from the ICD-9 coding version to ICD-10.

Changes Made to Accommodate ICD-10:

Progress Notes, VistA

- The TIU package will print and display ICD codes obtained from other VistA packages within a single Progress Notes that were captured at the time the data was entered, including:
 - ICD-9-CM diagnosis and procedure codes
 - ICD-10-CM diagnosis and ICD-10-PCS procedure codes
- The VistA TIU package will print and display ICD codes within a single progress note.

Progress Notes, CPRS

- The CPRS TIU application will print and display ICD-9 and ICD-10 diagnosis codes, procedure codes, obtained from other packages within Progress Notes at the time the data was entered.
- The CPRS TIU package will print and display ICD codes within a single progress note.

Discharge Summary

- The VistA TIU package will print and display ICD-9 and ICD-10 diagnosis and procedure codes and descriptions obtained from other VistA packages within Discharge Summaries that were captured at the time the data was entered.

Patient Data Objects

- Patient Data Object VA-WRIISC Active Problems will be modified to print and display ICD-10-CM diagnosis codes.

NOTE:

TIU Object VA-WRIISC ACTIVE PROBLEMS is the only nationally distributed TIU Object which includes Diagnoses/Problems.

Health Summary

- The VistA TIU package will print and display ICD-9 diagnosis codes obtained from other VistA packages within Health Summaries which display PN or DS.

Problem List

- TIU VistA protocols permitting users to link problems directly to a TIU Progress Note have been disabled. Note: This means that all problems linked directly to Progress Notes will predate this patch and will therefore be ICD-9 problems.

Patch TIU*1*279 – Create Missing Patient PRF TIU installs one new Progress Note Title into the TIU DOCUMENT DEFINITION file (8925.1) PATIENT RECORD FLAG CATEGORY I – MISSING PATIENT. The patch installation links the title to the existing document class, PATIENT RECORD FLAG CAT I. This title will be automatically linked to the MISSING PATIENT Patient Record Flag during the install of DG*5.3*869.

Patch TIU*1*275 – USH LEGAL SOLUTION installs one new Progress Note Title into the TIU DOCUMENT DEFINITION file (8925.1): PATIENT RECORD FLAG CATEGORY I – URGENT ADDRESS AS FEMALE. The patch installation links the title to the existing document class, PATIENT RECORD FLAG CAT I. This title will be automatically linked to the URGENT ADDRESS AS FEMALE Patient Record Flag during the install of DG*5.3*864.

Patch TIU*1*265 - PRF CAT I - HIGH RISK FOR SUICIDE supports the Improve Veteran Mental Health (IVMH) initiative, High Risk Mental Health (HRMH) -National Reminder & Flag.

This patch installs one new Title into the TIU DOCUMENT DEFINITION file (8925.1): PATIENT RECORD FLAG CATEGORY I - HIGH RISK FOR SUICIDE

PATIENT RECORD FLAG CATEGORY I - HIGH RISK FOR SUICIDE is used with the new Patient Record Flag.

Patch TIU*1*261 permits an authorized user to rescind an Advance Directive document by changing the title to RESCINDED ADVANCE DIRECTIVE.

Patch TIU*1*261 supports Imaging patch MAG*3.0*121, which provides the ability to watermark images "RESCINDED".

Note: EXACT TITLE NAMES are REQUIRED

The title of the Advance Directive to be rescinded must be ADVANCE DIRECTIVE
The title it is changed to when it is being rescinded must be RESCINDED ADVANCE DIRECTIVE

Both LOCAL and National Standard titles must be as above. Variations on either title will cause the Change Title action to fail to watermark images as rescinded.

These exact titles are required by policy. See the VHA HANDBOOK 1004.02 section on Advance Directives:

http://vaww1.va.gov/vhapublications/ViewPublication.asp?pub_ID=2042

Patch TIU*1*159 implements the War-Related Illness and Injury Study Centers (WRIISC pronounced "risk") note title and template. The associated note title is WRIISC ASSESSMENT NOTE. This note is described in the memo *Description of WRIISC Programs and Associated Referral Process* accompanying the patch. To get it to work properly a Clinical Coordinator authorized to edit shared templates must perform the following steps from the CPRS GUI:

1. Go to the Notes tab.
2. From the Options menu, select Edit Shared Templates.
3. In the Shared Templates pane highlight document Titles.
4. From the Tools menu select Import Template.
5. Select WRIISCASSESSMENT.TXML and press Open.
6. Highlight the WRIISC ASSESSMENT template.
7. In the Associated Title list box, select WRIISC ASSESSMENT NOTE.
8. Press OK.

Once these steps have been performed, the template and note title will work for all CPRS users. Further information about setting up shared templates is available in the *Computerized Patient Record System (CPRS) User Guide* in the section on Creating Personal Document Templates.

Chapter 2: Orientation

Manual organization

This manual is divided into four major sections:

Section	Purpose
I: Introduction	Presents overviews of TIU software and the User Manual.
II: Using TIU	Describes and demonstrates how to use the basic entry and reporting functions of TIU. This section is divided into sub-sections for the four major users of TIU: clinicians, MRTs, MIS Managers, and transcriptionists.
III: Managing TIU	Describes the options and tools available to coordinators and IRMS for assigning menus, setting parameters, and other management functions. Also includes Troubleshooting and Helpful Hints.
Glossary and Index	Definitions of terms and the index to the manual.

How each chapter is formatted

Each chapter generally follows the format of:

- Brief overview
- Description of process (step-by-step description of how to use functions, if appropriate)
- Examples

Online documentation: Intranet

Online Documentation for this product is available on the intranet at the following address:

<http://www.va.gov/vdl/>

This address takes you to the Clinical Products page, which has a listing of all the clinical software manuals. Click on the CPRS: Text Integration Utilities link and it will take you to the TIU Homepage.

Note: Remember to bookmark this site for future reference.

Special Instructions for the new VISTA Computer User

If you are unfamiliar with this package or other Veterans Health Information Systems and Technology Architecture (VISTA) software applications, we recommend that you study the *DHCP User's Guide to Computing*. This orientation guide is a comprehensive handbook for first-time users of any VISTA application to help you become familiar with basic computer terms and the components of a computer. It is reproduced and distributed periodically by the Kernel Development Group. To request a copy, contact your local Information Resources Management Service (IRMS) staff.

Graphic Conventions Used in This Manual

<Enter>

The Enter or Return key. It is pressed after every response you enter or when you wish to bypass a prompt, accept a default (/), or return to a previous action. In this manual, it is only included in examples when it might be unclear that such a keystroke must be entered.

Option examples

Menus and examples of computer dialogue that you see on the screen are shown in boxes:

Select Menu Option:

User responses

User responses are shown in **boldface**.

Select PATIENT NAME: **TIUPATIENT,ONE**

NOTE

The pointing finger with a NOTE is used to call your attention to something especially significant.

Example:

 **NOTE:** You can respond to many prompts by typing the first few letters of a name, option, or action.

Select PATIENT NAME: **TIUPATIENT,O** TIUPATIENT,ONE

TIU and VistA Conventions

^, ^^, ^^^

Enter the up-arrow (also known as a caret or circumflex) at a prompt to exit the current option, menu, sequence of prompts, or help. To get completely out of your current context and back to your original menu, you may need to enter two or three up-arrows. For example, when you're reviewing a list of documents, one up-arrow takes you to the next document; you need to enter two up-arrows to get out of the option.

> >

TIU screens can contain more information to the right of the main screen display. To see this information, enter the > character. To return to the main screen, enter the < character.

 **NOTE:** The arrow keys on the keypads of some keyboards can sometimes be used for navigation in List Manager applications, but this depends on the operating system. So if you get funny characters on your screen when you use those arrows, use the > and < symbols on the comma and period keys (the greater-than and less-than symbols).

Online Help ?, ??, ???

Online help is available by entering one, two, or three question marks at a prompt. One question mark elicits a brief statement of what information is appropriate for responding to the prompt; two question marks shows a list (and sometimes descriptions) of more actions; and three question marks provide more detailed help, including a list of possible answers, if appropriate.

Defaults (/) Defaults are responses provided to speed up your entry process. They are either the most common responses, the safest responses, or the previous response.

Examples:

Most common: Enter the ending date: NOW//

Safest: Do you wish to delete the entire entry: NO//

Last entered Enter the Provider Name: TIUPROVIDER,THREE//

List Manager Screen Display

TIU uses the List Manager utility which enables TIU (and other applications) to display a list of items in a screen format.

Screen title

The screen title changes according to what type of information List Manager is displaying (e.g., Progress Notes, Discharge Summary, etc.).

Header area

The header area is a “fixed” (non-scrollable) area that displays patient information.

List area

(scrolling region) This area scrolls if there are more items than will fit on one page. It displays a list of items, such as Unsigned Progress Notes, that you can take action on. If there’s more than one page of items, it’s listed in the upper right-hand corner of the screen (Page 1 of #).

Message window

This section displays a plus (+) sign, minus (-), or >> sign, or informational text (i.e., Enter ?? for more actions). If you enter a plus sign at the action prompt, List Manager “jumps” forward a page. If a minus sign is displayed and you enter it at the action prompt, List Manager “jumps” back a screen. The plus, minus, and > signs are only valid actions if they are displayed in the message window.

List Manager Screen Display cont'd

Action area

A list of actions display in this area of the screen. If you enter a double question mark (??) at the “Select Item(s)” prompt, you are shown a “hidden” list of additional actions that are available to use.

Entering Actions

The List Manager utility allows you to:

- browse through the list
- select items that need action
- take action against those items
- select other actions without leaving the option

Actions are entered by typing the name or abbreviation at the “Select Action” prompt.

Shortcut: Actions may also be preselected by typing the action abbreviation, then the number of the document on the list (Example: ED=1 will let you edit entry 1, Consult Report).

Besides the actions specific to the option you are working in, List Manager provides generic actions applicable to any List Manager screen. Enter a double question mark (??) at the “Select Action” prompt for a list of all actions available. The abbreviation for each action is shown in brackets following the action name. These actions are described on the next page.

List Manager Screen Display, cont'd

The following actions are available (enter ?? to see these):

+	Next screen	GO	Go to Page	DD	Detailed Display
-	Previous Screen	RD	Re Display Screen	EC	Edit Cosigner
FS	First Screen	ADPL	Auto Display(On/Off)	CT	Change Title
LS	Last Screen	Q	Quit	CWAD	CWAD Display
UP	Up a Line	>	Shift View to Right		
DN	Down a Line	<	Shift View to Left		

Generic (hidden) actions

Action	Description
Next Screen [+]	Move to the next screen (may be shown as a default)
Previous Screen [-]	Move to the previous screen
Up a Line [UP]	Move up one line
Down a Line [DN]	Move down one line
Shift View to Right [>]	Move the screen to the right if the screen width is more than 80 characters
Shift View to Left [<]	Move the screen to the left if the screen width is more than 80 characters
First Screen [FS]	Move to the first screen
Last Screen [LS]	Move to the last screen

Change Title (CT)	Allows you to change the Title of a note from, e.g., a CWAD note to a Nursing Note
CWAD Display (CWAD)	Displays details of any CWAD notes available

List Manager Screen Display, cont'd

Action	Description
Edit Cosigner [EC]	<p>Allows authorized users to modify the Expected Cosigner (Attending Physician for Discharge Summaries) of documents without having access to the text of the document. It is intended for Clinical Coordinators when they need to change the Expected Cosigner of a document whose Expected Cosigner cannot be otherwise changed because it is already signed. It permits the Expected Cosigner field to be edited for unsigned or uncosigned documents of type Progress Notes, Consults, Clinical Procedures, or Discharge Summaries.</p> <p>Note: Recent changes enforce limits on cosigning privileges. No provider may be a cosigner on Discharge Summaries if the provider requires a cosignature. To correct expected cosigners who were erroneously assigned before this restriction went into effect, perform a search on uncosigned notes, then use the (hidden) Edit Cosigner (EC) action to correct any problems.</p>
Quit [QU]	Exits the screen (may be shown as a default)

Chapter 3: TIU for Clinicians

Progress Notes/Discharge Summary Menu

This is the main TIU menu for clinicians. It includes all of the options necessary for clinicians to manage their Progress Notes, Discharge Summaries, and other clinical documents which may be set up locally, either separately or in an integrated fashion. TIU also allows you to continue to access Progress Notes and Discharge Summaries through OE/RR menus. CPRS allows point and click access to all Progress Notes, Discharge Summaries, and Consults TIU documents.

The Progress Notes/Discharge Summary (TIU) menu also includes a Personal Preferences menu that allows clinicians to change their own parameters for viewing clinical documents.

Option Name	Description
Progress Notes User Menu	This menu includes options for reviewing, entering, printing, and signing progress notes, either by individual patient or by multiple patients.
Discharge Summary User Menu	This menu includes options for reviewing, entering, printing, and signing discharge summaries, either by individual patient or by multiple patients.
Integrated Document Management	This menu allows clinicians to perform actions on progress notes, discharge summaries, and other clinical documents from a single menu For example, a clinician may want to bring up all his unsigned documents.
Personal Preferences	

Using Progress Notes through CPRS

Clinicians enter and review Progress Notes through CPRS (Computerized Patient Record System) VistA and List Manager or through the CPRS GUI. Here we give an example of reviewing Notes through the List Manager version of CPRS. The GUI version has a different sequence of steps.

Example: Reviewing and signing Notes through CPRS

1. Select the Clinician Menu from your CPRS menu.

```

OE    CPRS Clinician Menu
RR    Results Reporting Menu
AD    Add New Orders
RO    Act On Existing Orders
PP    Personal Preferences ...
Select Clinician Menu Option: OE CPRS Clinician Menu
  
```

2. The Patient Selection screen is displayed. If you have a patient or team list defined, the patients are on this display.

```

Ward 2B                               Mar 17, 1997 17:07:09           Page: 1 of 1
Current patient: ** No patient selected **
  
```

	Patient Name	ID	DOB	Room-Bed
1	TIUPATIENT,ONE	(3456)	Jan 01, 1951	
2	TIUPATIENT,THREE	(1996)	Mar 05, 1949	
3	TIUPATIENT,FIVE	(3779)	Nov 19, 1991	
4	TIUPATIENT,SEVEN	(3234)	Mar 03, 1966	
5	TIUPATIENT,TEN	(2432)	Apr 04, 1932	
6	TIUPATIENT,NINE	(2591)	Apr 25, 1931	9-B
7	TIUPATIENT,ELEVEN	(8910)	Jan 01, 1934	A-4
8	TIUPATIENT,TWO	(3243)	Apr 04, 1954	
9	TIUPATIENT,FOURTEEN	(4723)	Oct 23, 1927	A-2

```

Enter the number of the patient chart to be opened
+ Next Screen          CG Change List ...      FD Find Patient
- Previous Screen     SV Save as Default List  Q  Close
Select Patient: Close// 1          TIUPATIENT,ONE
Searching for the patient's chart ...
  
```

If you have a patient list defined in your personal preferences it is displayed here. If not, just enter a patient name.

3. Select a patient by:

- Entering a name from a list (if you have one defined and set as your default)
- Entering a patient's name (or last initial + last 4 letters of SSN)
- Entering FD (Find Patient), entering a ward or clinic name, then selecting a patient name from the list that appears.

Example: Reviewing Notes, cont'd

4. The "Cover Sheet" for the patient's record is displayed. Select Chart Contents.

Cover Sheet		Mar 17, 1997 17:07:50	Page: 1 of 2

TIU Dictation Control

TIU*1*297 added functionality to allow a facility to control TIU dictation privileges by division for TIU documents of any type (Op reports, DC Summaries, Consults, etc.). Authors should initiate a note stub with a unique ID number and dictation instructions. The unique ID number is generated by the system. It is normally not disclosed to the user. However, in this case, it is disclosed as part of the dictation instructions, for easy identification.

Sites may choose whether to use this functionality.

Dictation privileges are controlled by two new fields that were added to the TIU PARAMETERS File (#8925.99).

The two new fields added to the TIU PARAMETERS File (#8925.99) are:

- ENABLE DICTATION CONTROL (Field #.23), which can be answered **YES** to activate the patch functionality. An answer of **NO** or nothing disables the functionality.
- DICTATION INSTRUCTIONS (Field #6), a word processing field, which allows sites to enter site-specific dictation instructions. Within this field, sites may reference the variables TIUDA, TIUL5, and TIUINST by placing them between vertical bars, Example |TIUDA|. TIUDA will be the internal entry number of the current document, TIUL5 will be the last 5 digits of TIUDA and TIUINST will be the internal entry number of the INSTITUTION of the currently logged- in user. Kernel's software-wide variables, defined in the kernel technical manual, and FileMan's package-wide variables, defined in the FileMan technical manual, may be used as well.

These new fields may be modified by using the TIU BASIC PARAMETERS EDIT option.

Set the "Enable Dictation Control" Field (#23) to "Yes" to activate the functionality. Enter "BEGIN-DICTATION" in the first line of the text in the CPRS progress note to trigger replacement of the progress NOTE by the "Dictation Instruction" in Field (#6).

The patch also introduced a new routine, TIUDCT, modified existing routine, TIULP, and introduced a new security key, TIUDCT. The TIUDCT security key must be assigned to the CPRS users who are authorized to dictate TIU documents and transcription personnel such as the Facility Chief (HIM) and the Transcription Supervisor/Staff.

Template TIU BASIC PARAMETER EDIT INPUT TIU PARAMETERS File (#8925.99) was modified to allow a facility to control TIU dictation privileges, request dictating authors to initiate a note stub, and dictate a unique ID number with dictation instructions.

The TIU PARAMETERS file is based on the INSTITUTION File (#4). This functionality is enabled/disabled at the division level. Each division may have its own parameters, which can be controlled separately, allowing divisions to have different sets of TIU Dictation Instructions, **provided** the site's divisions were set up as separate institutions.

New Service Request, NSR 20141003 – TIU Dictation Control, was resolved with this patch.

Dictation Instructions Example:

Enter **YES** to activate DICTATION CONTROL. Add site specific instructions for your site in the DICTATION INSTRUCTIONS field using your TIU BASIC PARAMETER EDIT option.

```
Select OPTION NAME:      TIU BASIC PARAMETER EDIT      Basic TIU Parameters
Basic TIU Parameters

This note can ONLY be dictated using the Site Name VA DICTATION SYSTEM.
Begin dictation by stating "DICTATING PROGRESS NOTE #|TIUL5|."
In house, dial 45354 or from outside VA, 555-1212.
Enter your Dictation ID followed by the # key.
Enter appropriate work type followed by the # key.
Enter the patient's 9-digit SSN followed by the # key.

Press 2 to begin dictating.
Wait for the record tone to end.

Press 2 again to pause anytime during dictation.
You may pause up to 5 minutes.

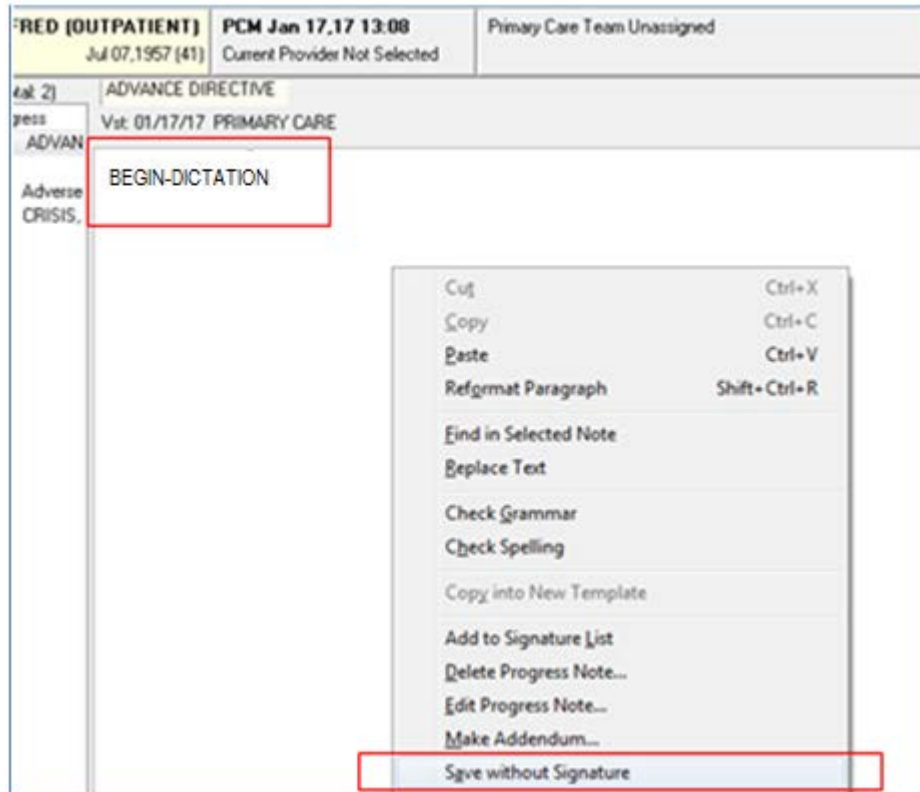

If you do not press 2 to pause, the system will warn you of disconnect
when no recording has taken place for over 60 seconds.

For STAT/Rush dictation, press 6 anytime during dictation then press 2 to
reactivate dictation mode.

When you have completed dictating the report:

Press 5 to disconnect, or
 Press 8 to dictate another report
 To "rewind" in dictation mode:
 Press 3 to rewind 10 seconds.
 Press 7 for continuous rewind. Wait, press 3 to play back.
 Press 77 to rewind to beginning of report.
 To edit the last words dictated:
 Press 3 or 73 to rewind to the last correct word.
 Press 2 to STOP playback and START recording.

Type the words "BEGIN-DICTATION" on the first line in a CPRS progress note then click "Save Without Signature."

The dictation number appears on the right side of the screen. Follow the instructions displayed in the body of the note.

LOCAL TITLE: Discharge Summary
STANDARD TITLE: DISCHARGE SUMMARY
DICT DATE: FEB 23, 2017@10:48 ENTRY DATE: MAR 17, 2017@09:05:38
DICTATED BY: RESIDENT,PHYSICIAN ATTENDING: STAFF,PHYSICIAN ONE
URGENCY: routine STATUS: UNDICTATED

This note can ONLY be DICTATED using the MILWAUKEE VA DICTATION SYSTEM.

Begin dictation by stating "DICTATING PROGRESS NOTE # 3590"

In house, Dial 1234
From outside VA, 555-1234

Press 2 to begin dictating. Wait for record tone to end.
Press 2 again to pause anytime during dictation. You may pause up to 5 minutes. If you do not press 2 to pause, the system will warn you of disconnect when no recording has taken place for over 60 seconds.

For STAT/Rush dictation, press 6 anytime during dictation, then 2 to reactivate dictation mode.

When you are done dictating the report either:
Press 5 to DISCONNECT
Or
Press 8 to DICTATE ANOTHER report

To "rewind" in dictation mode:
Rewind 10 seconds - Press 3
Continuous rewind - Press 7, wait, 3 to play back
Rewind to beginning of report - Press 77

To edit the last words dictated:
Press 3 or 73 to rewind to the last correct word
Press 2 to STOP playback and START recording.

If transcription is NOT available by 24 hours, contact Transcription Dept at x4321.

Sites not having the following business rules must determine the need to create them through “**USR CLASS MANAGEMENT MENU**” as indicated below:

Select Search through CPRS

You can narrow your view to signed notes by author, unsigned notes, etc. You can also specify the date order your notes will appear in: ascending (oldest first) or descending (most recent first) order.

Caution: Avoid selecting too large a date range or too general a category, as big searches are very system-intensive. This means that not only might it slow down your work, but everyone else's as well.

Progress Notes Options

Clinicians can review, enter, print, and sign progress notes, either by individual patient or by multiple patients, through TIU.

☞ **NOTE:** When reviewing several notes sequentially, the up-arrow (^) entry takes you to the next note. To exit from the review, enter two up-arrows (^ ^).

Clinician's Progress Notes Menu

Option	Description
Entry of Progress Note	This is the main option for entering a new progress note. You can also edit patient progress notes.
Review Progress Notes by Patient	This option allows you to review, edit, or sign a selected patient's progress notes, by selected criteria.
Review Progress Notes	This option allows clinicians to get quickly to a patient's list of notes, without preliminary prompts to select criteria for displaying notes.
All MY UNSIGNED Progress Notes	This option retrieves all your unsigned progress notes for review, edit, or signature.
Show Progress Notes Across Patients	This option allows you to search for and review progress notes by many different criteria: status, type, date range, and category. Caution: Avoid selecting too large a date range or too general a category, as big searches are very system-intensive. This means that not only might it slow down your work, but everyone else's as well.
Progress Notes Print Options ...	The options on this menu support the printing of chart or work copies, by author, location, patient, or ward. These options are described in Chapter 8.
List Notes By Title	This option allows you to look up progress notes by title within a specified date range.
Search by Patient AND Title	This option allows you to search for and review progress notes by patient, as well as many other criteria: status, type, date range, and category.
Personal Preferences...	The two options on this menu let you customize the way TIU operates for you; that is, which prompts will appear, what lists you will see to select from, etc. You can also specify the way documents are displayed on your review screens, by patient, by author, by type, in chronological or reverse chronological order, etc.

Entry of Progress Note

This is the main option for entering a new progress note. You can also *edit* patient progress notes.

Example 1: Inpatient progress note

Steps to use option:

1. Select *Entry of Progress Note* from your Progress Notes Menu. If you have a patient list set up (through Personal Preferences), it is displayed here.

```
Loading Ward Patient List...
                2B ward list
1  TIUPATIENT,ONE (3456) ~           8  TIUPATIENT,TWO (3243) A-4
2  TIUPATIENT,NINE (2591) ~         9  TIUPATIENT,EIGHT (3242) ~
3  TIUPATIENT,FOUR (2384) ~        10  TIUPATIENT,TEN (2432) A-2
4  TIUPATIENT,SEVEN (3234) ~       11  TIUPATIENT,TWELV (3213) A-1
5  TIUPATIENT,THREE (1996) ~      12  TIUPATIENT,FOURT (4723) ~
6  TIUPATIENT,FIVE (3779) ~       13  TIUPATIENT,SIXTE (1321) A-3
7  TIUPATIENT,SIX (2476) 9-B      14  TIUPATIENT,ELEVE (1414) ~
```

2. Type in a patient name or a number from the list. Demographic data and CWAD (Cautions, Warnings, Adverse Reactions, and Directives) notes are displayed. You are prompted to choose if you want to see any of the previous Progress Notes for this patient.

```
Select Patient(s): 7  TIUPATIENT,TWO 04-25-31  666043243P  NO  MILITARY
RETIREEE
                (6 notes) W: 01/27/97 15:17 (addendum 02/08/97 17:19)
                  A: Known allergies
                (1 note ) D: 03/26/97 13:02

Available notes: 11/11/96 thru 04/15/97 (27)
Do you wish to see any of these notes? NO// <Enter>
```

This indicates that there are 27 notes for this patient.

Entry of Progress Note, cont'd

3. Select a Title. If you have a personal Progress Notes title list set up through Personal Preferences, that list is displayed for you to choose from. Enter a Subject, if desired, and the text of the Progress Note.

```
Personal PROGRESS NOTES Title List for THREE TIUPROVIDER
1   Crisis Note
   2   Advance Directive
   3   Adverse Reactions
   4   Other Title

You may enter another Progress Note. Press RETURN to exit.
Select PATIENT NAME: <Enter>
```

Example 2: Outpatient note

Outpatient notes require more information than inpatient notes, because every outpatient encounter must now be associated with a visit to get workload credit. Most Progress Notes automatically get the visit data from Checkout or a scanned Encounter Form.

Steps to use option:

1. Select *Entry of Progress Note* from your Progress Notes Menu.

2. Type in a patient name.

```
Select Patient(s): TIUPATIENT,ONE TIUPATIENT,ONE 09-12-44 666233456 YES
SC VETERAN
(1 note ) C: 11/19/96 (addendum 01/28/97 09:55)
A: Known allergies
For Patient TIUPATIENT,ONE
```

3. Type in a Progress Note Title. You can use an existing Title or create a new one. If you have created a personal document list through the Personal Preferences' *Document Management* option, that list is displayed here.

```
Personal PROGRESS NOTES Title List for THREE TIUPROVIDER
1 Crisis Note
2 Advance Directive
3 Adverse Reactions
4 Other Title
TITLE: (1-4): 3 Adverse React/Allergy
```

4. Since this is a note for an outpatient, you may be prompted to select an existing visit or create a new visit to associate the progress note with.

This patient is not currently admitted to the facility...

Is this note for INPATIENT or OUTPATIENT care? OUTPATIENT// <Enter>

```
The following VISITS are available:
1> FEB 24, 1997@09:00 DIABETES CLINIC
2> SEP 05, 1996@10:00 CARDIOLOGY
CHOOSE 1-2 or <N>EW VISIT
<RETURN> TO CONTINUE
OR '^' TO QUIT: N
Creating new progress note...

Date/time of Note: NOW
Author of Note: TIUPROVIDER,THREE
...OK? YES//<Enter>
SERVICE: MEDICINE// <Enter> 111
```

Entry of Progress Note, cont'd

5. Enter a subject for your note (optional).

```
SUBJECT (OPTIONAL description): ?  
  Enter a brief description (3-80 characters) of the contents  
  of the document.  
SUBJECT (OPTIONAL description): Blue Note
```

6. Type in the text of the note. If it's a SOAP Note or there's a boilerplate for this, you can fill in the blanks or edit existing text. You can use the FileMan text editor or full-screen editor. Sign the Note when you're finished.

```
Calling text editor, please wait...  
  1>Follow-up visit to ensure compliance with regimen.  
  2><Enter>  
EDIT Option: <Enter>  
Save changes? YES//<Enter>  
Saving General Note with changes...  
Enter your Current Signature Code: [HIDDEN CODE] SIGNATURE VERIFIED..
```

7. Enter the Diagnosis associated with this Progress Note.

NOTE: To receive workload credit, VAMCs must now capture Provider, Diagnosis, and Procedure for all outpatient visits.

```
Please Indicate the Diagnoses for which the Patient was Seen:  
1 Abdominal Pain  
2 Abnormal EKG  
3 Abrasion  
4 Abscess  
5 Adverse Drug Reaction  
6 AIDS/ARC  
7 Alcoholic, intoxication

Review Progress Notes

This option allows clinicians to get immediately to a patient's list of notes, without preliminary prompts for selection criteria. It's particularly useful for when physicians are seeing patients in clinics and want to pull up their records quickly, as they are able to do with Progress Notes 2.5 (frequently accessed through OE/RR 2.5). Note that the actions below the black bar look more like OE/RR (and CPRS) actions than the ones you'll see in other TIU options.

1. **Select Review Progress Notes from your Progress Notes or OE/RR menu,** whichever one you commonly use. Then enter the name of the patient you are seeing.

```
Select Progress Notes User Menu Option: 2b Review Progress Notes
Select PATIENT NAME: TIUPATIENT,ONE TIUPATIENT,ONE 09-12-44 666233456
YES
  SC VETERAN
    (2 notes) C: 02/24/97 08:44
    (1 note ) W: 02/21/97 09:19
                A: Known allergies
    (2 notes) D: 03/25/97 08:57
Searching for the progress notes.
```

2. **A screen with a list of notes for your patient is displayed.** Items with the plus symbol (+) have addenda. You can look at details of any of the notes shown (by selecting the Browse or Detailed Display action), create a new note, make an addendum, sign a note, or perform any of the other actions listed below (as well as hidden actions).

Show Progress Notes Across Patients

This option allows you to search for and review progress notes by many different criteria: status, type, date range, and category. By different combinations of these criteria, you can see almost any view of your progress notes you could want.

NOTE: Use caution in how broad your search is (date range, # of patients, etc.), because searches for a lot of documents can be very system-intensive, slowing down response time for everyone.

Steps to use option:

1. Select *Show Progress Notes Across Patients* from the Clinician's Progress Notes Menu.

2. Select one of the following status(es) of progress notes:

- ◆ undictated
- ◆ untranscribed
- ◆ unreleased
- ◆ unverified
- ◆ unsigned
- ◆ uncosigned
- ◆ completed
- ◆ amended
- ◆ retracted

3. Select one of the following Progress Note Types.

- ◆ Advance Directive
- ◆ Adv React/Allergy
- ◆ Crisis Note
- ◆ Clinical Warning
- ◆ Historical Titles

4. Select one or more of the following search categories:

1	All Categories	6	Patient	11	Transcriptionist
2	Author	7	Problem	12	Treating Specialty
3	Division	8	Service	13	Visit
4	Expected Cosigner	9	Subject		
5	Hospital Location	10	Title		

5. Select the range of dates to include.

6. The notes meeting the criteria you selected are displayed.

UNSIGNED Progress Notes		Jun 18, 1997 09:19:20	Page: 1 of 1
by AUTHOR from 06/15/96 to 06/18/97			2 documents

Progress Notes Print Options

See Chapter 8 for examples and further descriptions of these options.

Option	Description
Author– Print Progress Notes	This option produces chart or work copies of progress notes for an author for a selected date range.
Location– Print Progress Notes	This option prints chart or work copies of progress notes for all patients who were at a specific location when the notes were written. The patients whose progress notes are printed on this report may not still be at that location. If Chart is selected, each note will start on a new page.
Patient– Print Progress Notes	This option prints or displays progress notes for a selected patient by selected date range.
Ward– Print Progress Notes	This option allows you to print progress notes for all patients who are now on a ward for a selected date range. This option is only for ward locations. NOTE: This option only prints to a printer, not to your computer screen.

List Notes by Title

This option allows you to look up progress notes by title within a specified date range. You can then take any of the usual actions on these notes.

Steps to use option:

1. Select *List Notes by Title* from the Clinician's Progress Notes Menu. Select the titles (one or more) of progress notes to search for.

```
Select Progress Notes User Menu Option: 6 List Notes By Title
Please Select the PROGRESS NOTES TITLES to search for:
 1) ??
Answer with TIU DOCUMENT DEFINITION NAME, or ABBREVIATION, or
      PRINT NAME
Do you want the entire TIU DOCUMENT DEFINITION List? y (Yes)
Choose from:
ADMISSION ASSESSMENT      TITLE

Progress Notes Statuses and Actions

Statuses

Status	Description
Amended *	The document has been completed and a privacy act issue has required its amendment. By design, only the following user classes are allowed to amend a note: CHIEF, MIS CHIEF, HIM PRIVACY ACT OFFICER
Completed *	The document has acquired all necessary signatures and is legally authenticated.
deleted	Status DELETED is no longer operable. Before status RETRACTED was introduced deleting a document removed the text of the document leaving a stub with status DELETED.
Retracted *	When a signed document is reassigned, amended, or deleted, a retracted copy of the original is kept for audit purposes.
Uncosigned *	The document is complete with the exception of cosignature (e.g., by a supervisor).
undictated	The document is required and a record has been created in anticipation of dictation and transcription, but the system has not yet been informed of its dictation.
unreleased	The document is in the process of being entered into the system, but has not yet been released by the originator (i.e., the person who entered the text directly online).
unsigned	The document is online in a draft state, but the author hasn't signed.
untranscribed	The document is required and the system has been informed of its dictation, but the transcription hasn't been entered or received by upload.
unverified	The document has been released or uploaded, but must be verified before the document may be displayed.

* As of TIU*1*234, documents of these statuses (i.e., signed documents) cannot be edited regardless of business rules.

NOTE:

- + = a report has addenda.
- * = priority (STAT) document.

Progress Note Actions

Find	Sign/Cosign	Change View
Add Document	Detailed Display	Copy
Edit	Browse	Delete Document
Make Addendum	Print	Quit
Link ...	Identify Signers	

Action	Description
Find	Allows you to search a list of documents for a text string (word or partial word) from the current position to the end of the list.
Add Document	Allows you to add a new Progress Note.
New Note	Same as Add Document, used in CPRS contexts.
Edit	Allows authorized users to edit selected documents online.
Make Addendum	Allows authorized users to add addenda to selected documents online. Physicians will be prompted for their signatures upon exit.
Link	Allows you to link documents to either problems, visits, or other documents. Such associations permit a variety of clinically useful “views” of the online record.
Sign/Cosign	Allows clinicians to electronically sign selected discharge summaries or addenda. NOTE: Electronic signature carries the same legal ramifications that wet signature of a hard-copy discharge summary carries. You are advised to carefully review each discharge summary for content and accuracy before exercising this option.
Detailed Display	Displays the report type, patient, urgency, line count, VBC line count, author, attending physician, transcriptionist, and verifying clerk, and also admission, discharge, dictation, transcription, signature, and amendment dates.
Browse	Allows you to browse through Documents from the Review Screen, by scrolling sequentially through the selected documents and their addenda. You can search for a word or phrase, or print draft copies.
Print	Allows you to print copies of VAF 10-1000 for selected summaries.
Identify Signers	Allows authorized users to identify additional signers for a document.
Change View	Allows you to change the displayed reports to signature status, review screen, or dictation date range.
Copy	Allows authorized users to copy one or more documents to other patients and encounters. This is particularly useful when documenting group sessions, etc.
Delete Document	Allows the author to delete an unsigned document. In rare cases, a signed document can be deleted but a copy is kept as a retracted document.
Change Title	This action on the “hidden” list allows you to change a Title for a Progress Note (e.g., CWAD Notes) to another Title.
Quit	Allows you to quit the current menu level.

Interdisciplinary Notes

Interdisciplinary Notes are a new feature of Text Integration Utilities (TIU) for expressing notes from different care givers as a single episode of care. They always start with a single note by the initial contact person (e.g., triage nurse, attending) and continue with separate notes created and signed by other providers and attached to the original note.

To accomplish this, your facility must:

1. Set up note titles for the initiating note and the attachment notes—also called parent note and child notes.
2. Use version 15 of the CPRS Windows (GUI) interface or later.

The *Text Integration Utilities (TIU) Implementation Guide* contains a new appendix, Appendix C, that describes in detail the technical aspects of setting up Interdisciplinary Notes.

The rest of this section shows the actions Interdisciplinary Notes using Version 15 of the CPRS Windows interface.

The Parent Note

You start any interdisciplinary note with a parent note. A parent is a note title that includes an ASU (Authorization/Subscription Utility) rule allowing attachments. Your facility should have set up these titles with unique names that allow you to easily identify them.

Only certain members of your team should start Interdisciplinary Notes. To establish a parent note for a patient and a specific episode of care, all they do is create a note with the proper title, and sign it.

The Child Note(s)

Continue an interdisciplinary note by attaching one or more child notes to the parent note. The intention is for each child note to be by a different provider involved in this episode of care. Again your facility has established a number of notes with unique titles to act as child notes.

Interdisciplinary Notes, cont'd

Previously created note attachments are made to the parent node by dragging and dropping. (Dragging and dropping may be a new concept to you. To drag and drop:

1. Point the cursor at the child note.
2. Hold down the left mouse button.
3. Move the cursor over the parent note. A ghost of the child note title will follow the cursor.
4. Release the left mouse button.

The following dialog appears to confirm the attachment:

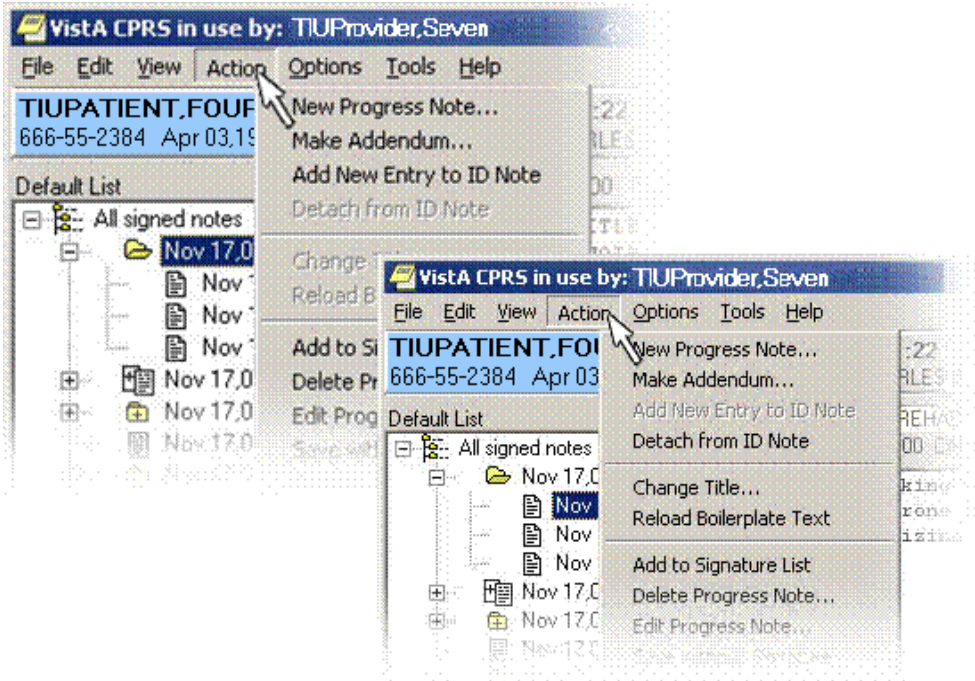

Interdisciplinary Notes, cont'd

Menu Actions

There are two Interdisciplinary Note specific menu commands in the CPRS Windows interface. They are:

- Add New Entry to ID Note
- Detach from ID Note

These commands become active (usable) when the correct kind of note is selected as in these illustrations:

In the first case, the parent note has been selected. In this case, you can add a new note to the Interdisciplinary Note without having to later attach it (via drag and drop).

In the second case, one of the child notes has been selected. In this case, you can detach this note from the parent.

Interdisciplinary Notes, cont'd

The Display

CPRS displays all notes in the Interdisciplinary Note reference date order unless one of the child notes is selected. In this case, CPRS displays the child note, then it displays all the notes in the Interdisciplinary Note reference date order; repeating the current note. In all other respects, the format of the display is the same as a regular note.

The display of unsigned notes depends upon the business rules in effect at your site. These rules may allow you to view the unsigned child notes of other providers in the context of an Interdisciplinary Note. This is up to your local authorities.

Meaning of Icons

In the CPRS Windows interface, notes are listed in a tree-structured arrangement. This is intended to graphically show a number of things:

1. Signed and Unsigned notes.
2. Notes with an addendum attached.
3. Interdisciplinary notes.
4. Regular notes.

The meaning of the various icons is:

Icon	Meaning
	A list of notes, either signed or unsigned.
	An Interdisciplinary Note. The open folder indicates that all the children are listed.
	A child to an Interdisciplinary Note.
	A regular note, or a child note that has not yet been attached to a parent.
	The plus sign indicates an addendum is present.
	An addendum

Interdisciplinary Notes, cont'd

In the List Manager interface, similar devices are used to indicate the type of note:

Symbol	Meaning
(Nothing)	A regular note, or a child note that has not yet been attached to a parent.
<	An Interdisciplinary Note parent.
>	An Interdisciplinary Note child.
+	An addendum is present.
+<	An Interdisciplinary Note with one or more addendum present. The addenda may be in the child note(s).
+>	An Interdisciplinary Note child with one or more addendum present.

LM Considerations

CPRS

Interdisciplinary Notes are not supported in the List Manager (LM) interface of CPRS with the following exception: Interdisciplinary Notes are viewed and printed just as other notes supported by TIU.

TIU

To access the full range of Interdisciplinary Notes features, use the **Progress Note User Menu** and choose exported option **2b, Review Progress Notes**.

The IN (Interdiscipl'ry Note) action is the universal action for operations on Interdisciplinary Notes. You should select a note before selecting this menu option. If the note selected is a parent note, it will prompt you to enter a child of this note. If the note selected is an unattached child note, it will prompt you to select the parent that goes with it.

In this example, a new child note is added to an existing parent note:

Discharge Summary

Clinicians can review, enter, print, and sign discharge summaries, either by individual patient or by multiple patients.

Clinician's Discharge Summary Menu

Option	Description
Individual Patient Discharge Summary	This option allows you to review, edit, or sign a patient's discharge summaries.
All MY UNSIGNED Discharge Summaries	This option shows you all unsigned discharge summaries for you to review, edit, or sign. You must have signing or cosigning privileges to sign or cosign, based on your document definition, user class status, and business rules governing these actions. See your Clinical Coordinator if you have any problems or questions.
Multiple Patient Discharge Summaries	This option shows you discharge summaries for selected statuses, types, and categories, which you can then review, edit, and/or sign.

Individual Patient Discharge Summary

This option allows you to review, edit, or sign a patient's discharge summaries.

Steps to use option:

1. Select *Individual Patient Discharge Summary* from your TIU menu, then select a patient.

```
Select Discharge Summary User Menu Option: Individual Patient Discharge Summary
Select PATIENT NAME: TIUPATIENT,ONE TIUPATIENT,ONE 09-12-44 666233456 YES SC
VETERAN
```

```
(2 notes) C: 05/28/96 12:37
(2 notes) W: 05/28/96 12:33
A: Known allergies
```

If the patient has any CWAD (Crisis, Warning, Allergies, and Directives) notes, they are displayed here.

```
Available summaries: 02/12/96 thru 02/12/96 (1)
```

2. Enter a date range to select summaries from, then select a summary from the ones displayed. The selected summary is displayed. Then select an action.

```

PATIENT NAME		AGE	SEX	RACE	SSN	CLAIM NUMBER
TIUPATIENT,ONE		51	M	MEXI	666-23-3456	
On admission patient had CT scan which showed a small area of parenchymal hemorrhage in the right temporal lobe which is most likely consistent with hemorrhagic contusion without mid line shift or incoordination.						
ACTIVE MEDICATIONS: Isordil 20 mgs p.o. t.i.d., Coumadin 2.5 mgs p.o. qd, ferrous sulfate 325 mgs p.o. b.i.d., Ativan 0.5 mgs p.o. b.i.d., Lactulose 15 ccs p.o. b.i.d., Calcium carbonate 650 mgs p.o. b.i.d. with food, Betoptic 0.5% ophthalmologic solution gtt OU b.i.d., Nephrocaps 1 tablet p.o. qd, Pilocarpine 4% solution 1 gtt OU b.i.d., Compazine 10 mgs p.o. t.i.d. prn nausea, Tylenol 650 mgs p.o. q4 hours prn.						
Patient is on hemodialysis, no known drug allergies.						

Printed Discharge Summary Example cont'd

PHYSICAL EXAMINATION: Patient had stable vital signs, his blood pressure was 160/85, pulse 84, respiratory rate 20, temperature 98 degrees. Patient was alert, oriented times three, cooperative. His speech was fluent, understanding of spoken language was good. Attention span was good. He had moderate memory impairment, no apraxia noted. Cranial nerves patient was blind, pupils are not reactive to light, face was asymmetric, tongue and palate are mid line. Motor examination showed muscle tone and bulk without significant changes. Muscle strength in upper extremities 5/5 bilaterally, sensory examination revealed intact light touch, pinprick and vibratory sensation. Reflexes 1+ in upper extremities, coordination finger to nose test within normal limits bilaterally. Alternating movements without significant changes bilaterally. Neck was supple.

LABORATORY: Showed sodium level 135, potassium 4.6, chloride 96, CO2 26, BUN 39, creatinine 5.3, glucose level 138. White blood cell count was 7, hemoglobin 11, hematocrit 34, platelet count 77.

HOSPITAL COURSE: Patient was admitted after head trauma with multiple medical problems. His coumadin was held. Patient had cervical spine x-rays which showed definite narrowing of C5, C6 interspace, slight retrolisthesis at this level, prominent spurs at this level as well as above and below. CT scan on admission showed a moderate amount of scalp thinning with subcutaneous air overlying the left frontal lobe. The basal cisterns are patent and there is no mid line shift or uncus herniation. Patient has also a remote left posterior border zone infarct with hydrocephalus ex vacuo of the left occipital horn, a rather large remote infarct in the inferior portion of the left cerebellar hemisphere. He had hemodialysis q.o.d. He restarted treatment with Coumadin. His last PT was 11.9, PTT 31. Patient refused before hemodialysis new blood tests. His condition remained stable.

DISCHARGE MEDICATIONS: Isordil 20 mgs p.o. t.i.d., Ferrous sulfate 325 mgs p.o. b.i.d., Ativan 0.5 mgs p.o. b.i.d., Lactulose 15 ccs p.o. b.i.d., Calcium carbonate 650 mgs p.o. b.i.d., Compazine 10 mgs p.o. t.i.d. prn nausea, Betoptic 0.5% OU b.i.d., Nephrocaps 1 p.o. qd, Pilocarpine 4% solution 1 gtt OU b.i.d., Coumadin 2.5 mgs p.o. qd, Tylenol 650 mgs p.o. q6 hours prn pain.

DISPOSITION/FOLLOW-UP: Recommend follow PT/PTT. Patient is on coumadin and CBC with differential because patient has chronic anemia and thrombocytopenia.

Patient will be transferred to Anytown VA in stable condition on 5/19/96.

All MY UNSIGNED Discharge Summaries

This option shows you all unsigned discharge summaries for you to review, edit, or sign. You must have signing or cosigning privileges to sign or cosign, based on your document definition, user class status, and business rules governing these actions. See your Clinical Coordinator if you have any problems or questions about electronic signature or cosigning.

Steps to use option:

1. Select *All MY UNSIGNED Discharge Summaries* from your TIU menu.
2. Your unsigned discharge summaries are displayed.

3. Select an action such as Sign/Cosign if you are authorized to perform these.

NOTE: You can enter Cosign rather than Sign/Cosign if you want to cosign.

Multiple Patient Discharge Summaries

This option shows you discharge summaries for selected statuses, types, and categories, which you can then review, edit, and/or sign.

+Caution: Avoid making your requests too broad (in statuses, search categories, and date ranges) because these searches can use a lot of system resources, slowing the computer system down for everyone.

Steps to use option:

1. Select Multiple Patient Discharge Summaries from your TIU menu.

2. Select one or more of the following statuses:

- ◆ untranscribed
- ◆ unsigned
- ◆ amended
- ◆ unreleased
- ◆ uncosigned
- ◆ purged
- ◆ unverified
- ◆ completed
- ◆ deleted

3. Select one of the following search categories:

1	All Categories	6	Patient	11	Transcriptionist
2	Author	7	Problem	12	Treating Specialty
3	Division	8	Service	13	Visit
4	Expected Cosigner	9	Subject		
5	Hospital Location	10	Title		

4. Enter a date range.

5. A list is displayed of the summaries that meet your specifications.

```

6. You can now take an appropriate action on one or all of the summaries.

Discharge Summary Statuses and Actions

Statuses

Status	Description
Amended *	The document has been completed and a privacy act issue has required its amendment. By design, only the following user classes are allowed to amend a Discharge Summary: CHIEF, MIS CHIEF, HIM PRIVACY ACT OFFICER
Completed *	The document has acquired all necessary signatures and is legally authenticated.
deleted	Status DELETED is no longer operable. Before status RETRACTED was introduced deleting a document removed the text of the document leaving a stub with status DELETED.
Retracted *	When a signed document is reassigned, amended, or deleted, a retracted copy of the original is kept for audit purposes.
uncosigned *	The document is complete with the exception of cosignature (i.e., by the supervisor).
undictated	The document is required and a record has been created in anticipation of dictation and transcription but the system has not yet been informed of its dictation.
unreleased	The document is in the process of being entered into the system but has not yet been released by the originator (i.e., the person who entered the text directly online).
unsigned	The document is online in a draft state but the author hasn't signed.
untranscribed	The document is required and the system has been informed of its dictation but the transcription hasn't been entered or received by upload.
unverified	The document has been released or uploaded but must be verified before the document may be displayed.

* As of TIU*1*234, documents of these statuses (i.e., signed documents) cannot be edited regardless of business rules.

Actions

Find	Sign/Cosign	Change View
Add Document	Detailed Display	Copy
Edit	Browse	Delete Document
Make Addendum	Print	Quit
Link ...	Identify Signers	

Actions	Description
Add Document	Enter a new Document.
Change View	Allows you to modify the list of reports by signature status, review screen, and dictation date range without exiting the review screen.
Copy	Allows authorized users to duplicate the current document. This is especially useful when composing a note for a group of patients (e.g., therapy group) and rapid duplication to all members of the group is appropriate.
Delete Document	Allows the author to delete an unsigned document. In rare cases, a signed document can be deleted but a copy is kept as a retracted document.
Detailed Display	Displays the report type, patient, urgency, line count, VBC line count, author, attending physician, transcriptionist, and verifying clerk, in addition to the admission, discharge, dictation, transcription, signature and amendment dates, without showing the narrative report text.
Edit	Allows authorized users to edit the current document online. When electronic signature is enabled, physicians will be prompted for their signatures upon exit, thereby allowing doctors to review, edit, and sign as a one-step process.
Find	Allows you to search for a text string (word or partial word) from the current position in the summary through its end. Upon reaching the end of the document, you will be asked whether to continue the search from the beginning of the document through the origin of the search.
Identify Signers	Allows authorized users to identify additional users who are to be alerted for concurrence signature. These signers may enter an addendum if they do not concur with the content of the document, but they may not edit the document itself.
Link	Allows you to link documents to either problems, visits, or other documents. Such associations permit a variety of clinically useful "views" of the online record.
Make Addendum	Allows authorized users to add an addendum to the current document online. When electronic signature is enabled, physicians are prompted for their signatures upon exit, thereby allowing doctors to review, edit and sign as a one-step process.
Print	Allows you to print copies of selected documents on your corresponding VA Standard Forms to a specified device.
Quit	Allows you to quit the current menu level.
Sign/Cosign	Allows clinicians to electronically sign the current summary. NOTE: Electronic signature carries the same legal ramifications that wet signature of a hard-copy discharge summary carries. Carefully review each discharge summary for content and accuracy before exercising this option.

Integrated Document Management

The options on this menu allow clinicians to review, edit, or sign progress notes, discharge summaries, and any other documents set up at your site. This menu is especially useful for clinicians who wish to see an integrated view of documents, to be able to edit or sign many types in one session without changing applications.

Option Name	Description
Individual Patient Document	Allows you to interactively review, edit, or sign a designated clinical document for a designated patient.
All MY UNSIGNED Documents	Gets all unsigned documents for review, edit, and signature.
Multiple Patient Documents	Provides an integrated Review Screen of all TIU documents.
Enter/edit Document	Allows you to enter and edit clinical documents directly online.
ALL Documents requiring my Additional Signature	Prints a report showing all documents that require an additional signature.

Individual Patient Document

Use this option to review an individual document for a patient. You can then edit, sign, delete, or perform other actions, as appropriate, on the document.

Steps to use option:

1. Select *Individual Patient Document* from your Integrated Document Management menu on your TIU menu.

2. Select a patient.

3. Enter a date range to display documents for. A list is displayed of that patient's documents for the specified time period.

```
Please specify a date range from which to select documents:
List documents Beginning: 02/17/92// 1/96 (JAN 1996)
                        Thru: 06/07/96// <Enter> (JUN 07, 1996)

1 06/07/96 00:00 Diabetes Education      ONE TIUPROVIDER, MD

Personal Preferences

The two options on this menu let you customize the way TIU operates for you; that is, which prompts will appear, what lists you will see to select from, etc. Thus, if you only work with Discharge Summaries or Progress Notes, or only a specific set within these categories, you can set your preferences so that only these documents appear on selection lists. You can also specify the way documents are displayed on your review screens: by patient, by author, by type, in chronological or reverse chronological order, etc.

If you require cosignatures on your documents (for example, because you're a medical student, PA, or some other category that your site has designated as needing cosignature), you can designate your "Default Cosigner" and then this person will be the default when you're prompted for the Expected Cosigner.

Option	Description
Personal Preferences	Specify defaults that you want in TIU (e.g., Default Location, Sort Order, Display Menus, Patient Selection Preference, etc.)
Document List Management	Specify your "pick lists" for document selection when composing or editing documents.

Personal Preferences

Steps to use option:

1. Select *Personal Preferences* from your TIU menu.

```
Select Progress Notes/Discharge Summary [TIU] Option: Personal Preferences
1      Personal Preferences
2      Document List Management
Select Personal Preferences Option: 1 Personal Preferences
```

2. Select *Personal Preferences* from your Personal Preferences menu.

Indicate which person will usually cosign your Progress Notes.
Answer with NEW PERSON NAME, or INITIAL, or SSN, or NICK NAME, or DEA#,
or VA#
Do you want the entire 66-Entry NEW PERSON List? N
DEFAULT COSIGNER: TIUPATIENT,TWO TIUPATIENT, TWO, CA PHYSICIAN
ASK 'Save changes?' AFTER EDIT: y YES
ASK SUBJECT FOR PROGRESS NOTES: YES// ??
Enter YES if you want to be prompted for a SUBJECT when entering or
editing a Progress Note. Subject is a freetext, indexed field which
may help you to find notes about a given topic, etc.
Choose from:
1      YES
0      NO
ASK SUBJECT FOR PROGRESS NOTES: YES// <Enter>
NUMBER OF NOTES ON REV SCREEN: ??
This determines the number of notes that will be included in your
initial list when reviewing progress notes by patient.
```

Personal Preferences, cont'd

```
NUMBER OF NOTES ON REV SCREEN: 5??
Type a Number between 15 and 100
NUMBER OF NOTES ON REV SCREEN: 15
SUPPRESS REVIEW NOTES PROMPT: ??
Allows user to specify whether to suppress the prompt to
Review Existing Notes on entry of a Progress Note. YES will
SUPPRESS the prompt, while NO, or no entry will allow the
site's default setting to take precedence.
Choose from:
1         YES
0         NO
SUPPRESS REVIEW NOTES PROMPT: 0
Select DAY OF WEEK: Monday
Are you adding 'Monday' as a new DAY OF WEEK (the 1ST for this TIU PERSONAL
PREFERENCES)? Y (Yes)
HOSPITAL LOCATION: GENERAL MEDICINE          TIUPATIENT,TWO
Select DAY OF WEEK: <Enter>
1         Personal Preferences
2         Document List Management
```

Document List Management

This option allows you to specify which types (Titles) of documents you wish to choose from when asked to select from a given Class (e.g., Discharge Summary or Progress Notes). Then when you create a Progress Note, you will be prompted to select from the specified list of Titles, say, Lipid Clinic Note, History & Physical, Interservice Transfer Note, and Discharge Planning, in that order. This option also allows you to specify a default title for the selected Class.

Steps to use option:

1. Select *Document List Management* from your Personal Preferences Menu on your TIU menu.

```
Select Personal Preferences Option: 2 Document List Management
--- Personal Document Lists ---

This option allows you to create and maintain lists of TITLES for any of the
active CLASSES of documents supported by TIU at your site.

Explain Details? NO// y YES

When you use the option to enter a document belonging to a given class, you will
be asked to select a TITLE belonging to that class.
```

Document List Management, cont'd

For any particular class, you may find that you only wish to choose from among a few highly specific titles (e.g., if you are a Pulmonologist entering a PROGRESS NOTE, you may wish to choose from a short list of three or four titles related to Pulmonary Function, or Pulmonary Disease).

Rather than presenting you with a list of hundreds of unrelated titles, TIU will present you with the list you name here.

In the event that you need to select a TITLE which doesn't appear on your list, you will always be able to do so.

NOTE: If you expect to enter a single title, or would be unduly restricted by use of a short list, then we recommend that you bypass the creation of a list, and simply enter a DEFAULT TITLE for the class. This option will afford you the opportunity to do so.

2. Answer the following prompts, as appropriate.

```
Enter/edit Personal Document List for ONE TIUPROVIDER
Add a new Personal Document List? YES// <Enter>
CLASS: ?
    Please select the parent group to which the document list
    belongs. You may only pick CLASSES of documents at this
    prompt.
    Answer with TIU DOCUMENT DEFINITION NAME, or ABBREVIATION,
    or PRINT NAME
Do you want the entire TIU DOCUMENT DEFINITION List? y (Yes)
Choose from:
    DISCHARGE SUMMARY      CLASS
    PROGRESS NOTES        CLASS
CLASS: Progress Notes
Edit (L)ist, (D)efault TITLE, or (B)oth? BOTH// <Enter> both

When selecting from this PARENT CLASS, which TITLES would you like to be
presented with initially?

Select TITLE: PSYCHOLOGY - CRISIS
Select TITLE: PSYCHOLOGY - FAMILY THERAPY
Select TITLE: PSYCHOLOGY - NURSING NOTE
Select TITLE: NURSING NOTES - ENCOUNTER GROUP

Now, Specify the TITLE you'd like as your DEFAULT for PROGRESS NOTES

DEFAULT TITLE: ??
    This determines what TITLE will be offered by default when
    selecting from a given parent class (e.g., when entering a
    PROGRESS NOTE, you may want the DEFAULT TITLE to be DIABETES
    EDUCATION, etc.).
```

Document List Management, cont'd

```
DEFAULT TITLE: PSYCHOLOGY
  1  PSYCHOLOGY - BEHAV MED          TITLE
  2  PSYCHOLOGY - BIOFEEDBACK       TITLE
  3  PSYCHOLOGY - CRISIS            TITLE
  4  PSYCHOLOGY - FAMILY THERAPY    TITLE  TITLE
  5  PSYCHOLOGY - IP SATC           TITLE
TYPE '^' TO STOP, OR
CHOOSE 1-5: 3

  4  SUBSTANCE ABUSE TREATMENT CENTER CONSULT      TITLE
CHOOSE 1-4: 1
  Are you adding 'SUBSTANCE ABUSE' as
  a new PERSONAL DOCUMENT LIST (the 1ST for this TIU PERSONAL DOCUMENT TYPE
LIST)? Y (Yes)
SEQUENCE: 1
DISPLAY NAME: SUBSTANCE ABUSE
```

Document Definitions (Clinician)

TIU uses a structure called Document Definitions to organize Progress Notes, Discharge Summaries, and other documents. It contains the Document Definition Hierarchy, which allows documents (Titles) to inherit characteristics of the higher levels, Class and Document Class, such as signature requirements and print characteristics. This structure creates the capability for better integration, shared use of boilerplate text, components, and objects, and a more manageable organization of documents. End users (clinical, administrative, and MIS staff) need not be aware of the hierarchy. They work at the Title level, with the actual documents.

The Document Definitions menu for Clinicians may be assigned to those clinicians who are interested in creating and editing boilerplate text or in viewing or editing Document Definition entries (Class, Document Class, or Title). You can also view available Objects that can be embedded in boilerplate text. See your Clinical Coordinator or the TIU Implementation Guide if you need further information about these options or descriptions of Document Definition concepts.

Option	Description
Edit Document Definitions	This option allows you to view and edit entries. Entries are presented in hierarchy order. Items of an entry are in Sequence order, or if they have no Sequence, in alphabetic order by Menu Text, and are indented below the entry. Since Objects don't belong to the hierarchy, they can't be viewed/edited using the Edit Option.
Sort Document Definitions	The Sort option allows you to view and edit entries, by sort criteria. It then displays selected entries in alphabetic order by Name, rather than in hierarchy order. Depending on sort criteria, entries can include Objects.
View Objects	The option displays Objects within selected Start With and Go To values in alphabetic order by Name.

Edit Document Definitions

This example shows you how to traverse the hierarchy to see details about a Title in Document Definitions, in this case, an Advance Directive. The first screen shows just the top level of document types. A + indicates that there are items under that document type. To see these, select Expand/Collapse, then enter the number of the document type to be expanded.

TIU and Health Summary

A new Health Summary component is available (through Patch GMTS*2.7*12), *Selected Progress Notes*, which allows selection of specific Progress Notes Titles for display on Health Summaries. Patch GMTS*2.7*45, *Interdisciplinary Progress Notes*, expands this functionality to include Interdisciplinary Notes.

All Progress Notes, Discharge Summary, and CWAD components now extract data from TIU, rather than Progress Notes (GMRP), or Discharge Summary (GMRD).

Care has been taken to assure that the formatting and content of the components have remained the same, except that the signature block information will now reflect the author's (and cosigner's) name and title at the time of signature, rather than displaying their current values at the time of output.

Chapter 4: TIU for Medical Record Technicians

Medical Record Technicians in the MIS or HIMS of Medical Administration Service complete the tasks of assuring that all discharge summaries placed in a patient's medical record have been verified for accuracy and completion. They are also responsible for assuring that a permanent chart copy has been placed in a patient's medical record for each separate admission to the hospital.

MRT Menu

This is the main TIU menu for Medical Record Technicians (MRTs). It includes all of the options necessary for MRTs to review, edit, sign, and print documents, print reports on TIU documents, search for documents, and review upload filing events.

Option	Description
Individual Patient Document	This option allows MRTs to review, edit, or sign patient Documents.
Multiple Patient Documents	Text Integration Utilities review screen of all types of TIU documents available for MRTs.
Review Upload Filing Events	This option allows MRTs to generate a list of all upload filing events (i.e., successes, filing errors, or missing field errors) by division, by status, by date range, and to print the corresponding error records or resolve the error (e.g., correct the Patient SSN or Admission date), and retry the filer.
Print Document Menu ...	This menu allows MAS personnel to print chart or work copies of discharge summaries, progress notes, or mixed Documents.
Released/Unverified Report	This report gives information on documents for a specified time period that have been released from transcription but still aren't verified. This menu action can be eliminated if Transcription Release or MAS Verification parameters are not enabled.
Search for Selected Documents	Allows MRT's to generate lists of selected documents by extended search criteria (e.g., status, search category, and reference date range). These can then be reviewed individually or by groups, verified, sent back to transcription, reassigned, or printed.
Unsigned/Uncosigned Report	Provides information on unsigned/uncosigned documents for one, multiple, or all divisions. The report can be either Summary or Full. The summary report lists the number of documents by the service or section of the author. The full report lists detailed document information (such as author, patient, patient SSN, etc.) by the service or section of the author.
Reassignment Document Report	Provides a list of reassigned notes based on date range.

Option	Description
Review unsigned additional signatures	Gives a list of documents that require additional signatures. Provides either a detailed report listing each document that requires an additional signature, or a summary report.

Individual Patient Document

Use this option to review, verify, print or other actions an MRT can perform on clinical documents for a selected patient.

Steps to use option:

- 1. Select *Individual Patient Document* from the TIU MRT menu, and then enter a patient name to view documents for.**

```
Select Text Integration Utilities (MRT) Option: 1 Individual Patient Document
Select PATIENT NAME: TIUPATIENT,ONE TIUPATIENT,ONE 666-23-3456 1A YES
SC VETERAN
(2 notes) w: 05/28/96 12:33
Available documents: 10/24/96 thru 10/28/96 (3)
```

Enter a date range, then choose a document from the list.

```
Please specify a date range from which to select documents:
List documents Beginning: 02/17/96// <Enter> (FEB 17, 1992)
Thru: 10/28/96//<Enter> (OCT 28, 1996)
1 10/28/96 17:11 BP TEST One TIUProvider, MD
Adm: 07/22/91 Dis: 02/12/96
2 10/25/96 11:32 Psychology - Crisis Four TIUProvider
Adm: 10/25/96
Choose documents: (1-6): 1
```

If the patient has Cautions, Warnings, Allergies, or Directives (CWAD), they are displayed here. In this case, the patient has a Warning (W).

<ol style="list-style-type: none"> 1. MRI. 2. CT SCAN OF HEAD. 							
HISTORY OF PRESENT ILLNESS:							
<p>Patient is a 49-year-old, white male with past medical history of end stage renal disease, peripheral vascular disease, status post BKA, coronary artery disease, hypertension, non insulin dependent diabetes mellitus, diabetic retinopathy, congestive heart failure, status post CVA, status post thrombectomy admitted from Anytown VA after a fall from his wheelchair in the hospital. He had questionable short lasting loss of consciousness but patient is not very sure what has happened. He denies headache, vomiting, vertigo. On admission patient had CT scan which showed a small area of parenchymal hemorrhage in the right temporal lobe which is most likely consistent with hemorrhagic contusion without mid line shift or incoordination.</p>							
ACTIVE MEDICATIONS: Isordil 20 mgs p.o. t.i.d., Coumadin 2.5 mgs p.o. qd, ferrous sulfate 325 mgs p.o. b.i.d., Ativan 0.5 mgs p.o. b.i.d., Lactulose 15 ccs p.o. b.i.d., Calcium carbonate 650 mgs p.o. b.i.d. with food, Betoptic 0.5% ophthalmologic solution gtt OU b.i.d., Nephrocaps 1 tablet p.o. qd, Pilocarpine 4% solution 1 gtt OU b.i.d., Compazine 10 mgs p.o. t.i.d. prn nausea, Tylenol 650 mgs p.o. q4 hours prn.							
Patient is on hemodialysis, no known drug allergies.							
PHYSICAL EXAMINATION: Patient had stable vital signs, his blood pressure was 160/85, pulse 84, respiratory rate 20, temperature 98 degrees. Patient was alert, oriented times three, cooperative. His speech was fluent, understanding of spoken language was good. Attention span was good. He had

Discharge Summary Print Example cont'd

SALT LAKE CITY		priority	06/27/96 08:46		Page: 4	
PATIENT NAME		AGE	SEX	RACE	SSN	CLAIM NUMBER
TIUPATIENT, ONE		51	M	MEXI	666-23-3456	

moderate memory impairment, no apraxia noted. Cranial nerves patient was blind, pupils are not reactive to light, face was asymmetric, tongue and palate are mid line. Motor examination showed muscle tone and bulk without significant changes. Muscle strength in upper extremities 5/5 bilaterally, sensory examination revealed intact light touch, pinprick and vibratory sensation. Reflexes 1+ in upper extremities, coordination finger to nose test within normal limits bilaterally. Alternating movements without significant changes bilaterally. Neck was supple.

LABORATORY: Showed sodium level 135, potassium 4.6, chloride 96, CO2 26, BUN 39, creatinine 5.3, glucose level 138. White blood cell count was 7, hemoglobin 11, hematocrit 34, platelet count 77.

HOSPITAL COURSE: Patient was admitted after head trauma with multiple medical problems. His coumadin was held. Patient had cervical spine x-rays which showed definite narrowing of C5, C6 interspace, slight retrolisthesis at this level, prominent spurs at this level as well as above and below. CT scan on admission showed a moderate amount of scalp thinning with subcutaneous air overlying the left frontal lobe. A small area of left parenchymal hemorrhage adjacent to the right petros bone in the temporal lobe which most likely represents a hemorrhagic contusion. Repeated CT scan on 5/13/94 didn't show any progressive changes. Patient remained in stable condition. He had hemodialysis q.o.d. He restarted treatment with Coumadin. His last PT was 11.9, PTT 31. Patient refused before hemodialysis new blood tests. His condition remained stable.

DISCHARGE MEDICATIONS: Isordil 20 mgs p.o. t.i.d., Ferrous sulfate 325 mgs p.o. b.i.d., Ativan 0.5 mgs p.o. b.i.d., Lactulose 15 ccs p.o. b.i.d., Calcium carbonate 650 mgs p.o. b.i.d., Compazine 10 mgs p.o. t.i.d. prn nausea, Betoptic 0.5% OU b.i.d., Nephrocaps 1 p.o. qd, Pilocarpine 4% solution 1 gtt OU b.i.d., Coumadin 2.5 mgs p.o. qd, Tylenol 650 mgs p.o. q6 hours prn pain.

DISPOSITION/FOLLOW-UP:
 Recommend follow PT/PTT. Patient is on coumadin and CBC with differential because patient has chronic anemia and thrombocytopenia.
 Patient will be transferred to Anytown VA in stable condition on 5/19/94.

Note: A full Unsigned/Uncosigned Report requires a printer device capable of printing 132 columns.

Reassignment Document Report

The reassign action reassigns a note to a different patient, admission, or visit. Besides this, the reassign action may be used to promote an Addendum as an Original, swap the Addendum and the Original, or change a discharge summary to an Addendum.

This report provides a list of reassigned notes based on date range. In the following example TIU displays a report of reassigned documents over the past 6 months:

```

Review Unsigned Additional Signatures

This option prints either a detailed or summary report of documents requiring additional signatures.

In the detailed report the patient name is abbreviated to the patient initials followed by the last six digits of the social security number to save space.

In the following example, a detailed report is run covering a four month period:

```
Select Text Integration Utilities (MRT) Option: ?
 1 Individual Patient Document
 2 Multiple Patient Documents
 3 Review Upload Filing Events
 4 Print Document Menu ...
 5 Released/Unverified Report
 6 Search for Selected Documents
 7 Unsigned/Unco-signed Report
 8 Reassignment Document Report
 9 Review unsigned additional signatures

Enter ?? for more options, ??? for brief descriptions, ?OPTION for help text.

You have PENDING ALERTS
  Enter "VA to jump to VIEW ALERTS option

Select Text Integration Utilities (MRT) Option: 9 Review unsigned additional

Chapter 5: TIU for MIS/HIMS Managers

The Medical Information Section (MIS), also called Health Information Management Section (HIMS), maintains and manages records of clinical documents, including copies of statistical reports, and chart or work copies of discharge summaries and progress notes.

MIS Manager's Menu

Option	Description
Individual Patient Document	Allows you to review or print patient Clinical Documents.
Multiple Patient Documents	This option allows MIS Managers to see any of the available TIU documents on the Text Integration Utilities Review Screen.
Print Document Menu	This menu gives MAS personnel access to options which print CHART or WORK copies of discharge summaries, progress notes, or mixed Documents on demand.
Search for Selected Documents	Allows MIS Managers to generate a list of selected documents based on extended search criteria; e.g., STATUS, SEARCH CATEGORY, and REFERENCE DATE RANGE).
Statistical Reports	This menu allows you to view or print statistical reports for line counts and timeliness by Author, Transcriptionist, and Service.
Unsigned/Uncosigned Report	Provides information on unsigned and uncosigned documents for one, multiple, or all divisions. The report can be either Summary or Full. The summary report lists the number of documents by the service or section of the author. The full report lists detailed document information (such as author, patient, patient SSN, etc.) by the service or section of the author.
Missing Text Report	Reports which TIU Documents that do not have any report text, are missing the 0 node of the text node, or both cases. Documents may be of any type, including addenda but not notes with components or addenda attached to them.
Missing Text Cleanup	This is a utility for assisting with the cleanup of documents without report text. In some cases you may choose to correct documents manually, such as when the author is still available or when the document was originally an upload document.

Option	Description
UNKNOWN Addenda Cleanup	Gives a list of surgery addenda that are not connected to an Operations Report and provides options for reviewing, assistance in finding the parent, and attaching to the parent.
Missing Expected Cosigner Report	Provides a list of documents that have a status of "Uncosigned" where the "Expected Cosigner" field is null, 0 or -1.
Mark Document as 'Signed by Surrogate'	Provides a way to mark a document as 'Signed by Surrogate'. This will set the .09 field of file 8925.7 to 1 - meaning that the signing for an Additional Signer was done by a surrogate of that Additional Signer.
Mismatched ID Notes	This option runs a routine that will report/fix mismatched interdisciplinary (ID) notes.
TIU 215 ANALYSIS	Surgery cases will be analyzed within a particular date range and information from Nurse Intraoperative Report (NIR) and/or Anesthesia reports will be compared to their corresponding TIU notes. If the information does not match, the case number will be recorded as one that needs to be reviewed.
Transcription Billing Verification Report	This report can be run by division and provides information on all transcriptionists or one or more selected transcriptionist. It reports based on an entered date range. Since the VBC Line Count is only calculated for transcribed reports, it does not report on any document transcribed before the line count patch was installed.
CWAD/Postings Auto Demotion Setup	This option on the menu allows Clinical Application Coordinators and/or site designated personnel to configure CWAD notes for auto demotion using the CWAD/Postings Auto-Demotion Setup.

Individual Patient Document

Use this option to review or print TIU documents for a patient.

Steps to use option:

1. Select *Individual Patient Document* from the MIS Manager Menu, and then enter the patient name.

```
Select Text Integration Utilities (MIS Manager) Option: Individual Patient Document
Select PATIENT NAME: TIUPATIENT,SEVEN TIUPATIENT,SEVEN 04-25-31 666042591P NO MILITARY RETIREE
(2 notes) W: 09/16/96 15:12 (addendum 09/18/96 09:53)
A: Known allergies
Available documents: 08/11/95 thru 10/10/96 (131)
```

2. Select a date range for the documents you wish to review, and then choose one or more of the documents displayed.

```
Please specify a date range from which to select documents:
List documents Beginning: 08/11/95// t-15 (SEP 30, 1996)
Thru: 10/10/96// <Enter> (OCT 10, 1996)

Select Action: Quit//
```

Multiple Patient Documents

Use this option to display TIU documents of specified types, which can then be reviewed, verified, sent back to transcription, reassigned, or printed.

- + **Caution:** **Avoid making your requests too broad (in statuses, search categories, and date ranges) because these searches can use a lot of system resources, slowing the computer system down for everyone. The example below would probably be too broad in a large hospital.**

Steps to use option:

- 1. Select *Multiple Patient Documents* from the MIS Manager menu. Answer the prompts that follow.**

```
Select Text Integration Utilities (MIS MANAGER) Option: Multiple Patient Documents
Select division: ALL// <Enter>
Select Status: UNSIGNED// <Enter>      Unsigned
Select Clinical Documents Type(s): ?
1 Progress Notes 2 Discharge Summary      3 Addendum
Enter selection(s) by typing the name(s), number(s), or abbreviation(s).

Select Clinical Documents Type(s): 1-3 Addendum Discharge Summary
Progress Notes
Start Reference Date [Time]: T-7//t-15 (MAR 19, 1997)
Ending Reference Date [Time]: NOW// <Enter> (APR 18, 1997@15:21)
Searching for the documents.....
```

These may differ at your site.

- 2. When the documents that fit the criteria you entered are displayed, choose an action and a document(s).**

Discharge Summary Print Example cont'd

SALT LAKE CITY priority 06/27/96 08:46 Page: 4

PATIENT NAME | AGE | SEX | RACE | SSN | CLAIM NUMBER
TIUPATIENT,ONE | 51 | M | MEXI | 666-23-3456 | -----

moderate memory impairment, no apraxia noted. Cranial nerves patient was blind, pupils are not reactive to light, face was asymmetric, tongue and palate are mid line. Motor examination showed muscle tone and bulk without significant changes. Muscle strength in upper extremities 5/5 bilaterally, sensory examination revealed intact light touch, pinprick and vibratory sensation. Reflexes 1+ in upper extremities, coordination finger to nose test within normal limits bilaterally. Alternating movements without significant changes bilaterally. Neck was supple.

LABORATORY: Showed sodium level 135, potassium 4.6, chloride 96, CO2 26, BUN 39, creatinine 5.3, glucose level 138. White blood cell count was 7, hemoglobin 11, hematocrit 34, platelet count 77.

HOSPITAL COURSE: Patient was admitted after head trauma with multiple medical problems. His coumadin was held. Patient had cervical spine x-rays which showed definite narrowing of C5, C6 interspace, slight retrolisthesis at this level, prominent spurs at this level as well as above and below. CT scan on admission showed a moderate amount of scalp thinning with subcutaneous air overlying the left frontal lobe. A small area of left parenchymal hemorrhage adjacent to the right petros bone in the temporal lobe which most likely represents a hemorrhagic contusion. Repeated CT scan on 5/13/94 didn't show any progressive changes. Patient remained in stable condition. He had hemodialysis q.o.d. He restarted treatment with Coumadin. His last PT was 11.9, PTT 31. Patient refused before hemodialysis new blood tests. His condition remained stable.

DISCHARGE MEDICATIONS: Isordil 20 mgs p.o. t.i.d., Ferrous sulfate 325 mgs p.o. b.i.d., Ativan 0.5 mgs p.o. b.i.d., Lactulose 15 ccs p.o. b.i.d., Calcium carbonate 650 mgs p.o. b.i.d., Compazine 10 mgs p.o. t.i.d. prn nausea, Betoptic 0.5% OU b.i.d., Nephrocaps 1 p.o. qd, Pilocarpine 4% solution 1 gtt OU b.i.d., Coumadin 2.5 mgs p.o. qd, Tylenol 650 mgs p.o. q6 hours prn pain.

DISPOSITION/FOLLOW-UP:
Recommend follow PT/PTT. Patient is on coumadin and CBC with differential because patient has chronic anemia and thrombocytopenia.
Patient will be transferred to Anytown VA in stable condition on 5/19/94.

Correcting Documents that are Entered in Error

Reassigning signed documents is restricted to the “Chief, MIS User Class.” This includes notes that are awaiting a co-signature. If the document is completely unsigned, users who are Author/Dictator or users with proper authorization may reassign it.

Besides reassigning a note to a different patient, admission, or visit, the reassign action may be used to promote an Addendum as an Original, swap the Addendum and the Original, change a discharge summary to an Addendum.

The basic reassign process includes the following steps:

1. **Electronic signature challenge.** If the document is already signed, TIU asks for the electronic signature of the Chief of MIS.
2. **Retract.** If the document is moved to a different patient, TIU retracts the document.
3. **Re-edit original visit.** If necessary, the PCE information is updated for the original visit.
4. **Edit destination visit.** If necessary, PCE information is collected or revised for the new visit.
5. **Sign.** The original provider needs to sign the document. If the document was moved to a different patient, TIU removes the original signature.

In the following example, an unsigned note is transferred from one patient to another:

```

Rescinding Advance Directives

Patch TIU*1*261 supports Imaging patch MAG*3.0*121. The two patches are being released in a combined release, with TIU*1*261 requiring MAG*3.0*121. Patch MAG*3.0*121 provides the ability to watermark images "RESCINDED".

Patch TIU*1*261 permits an authorized user to rescind an Advance Directive document by changing the title to RESCINDED ADVANCE DIRECTIVE.

MAG*3.0*121 takes it from there and watermarks any linked images "RESCINDED".

NOTE: Exact title names are required

Exact title names are required. The title of the Advance Directive to be rescinded must be ADVANCE DIRECTIVE

The title it is changed to when it is being rescinded must be
RESCINDED ADVANCE DIRECTIVE

Both LOCAL and National Standard titles must be as above. Variations on either title will cause the Change Title action to fail to watermark images as rescinded.

These exact titles are required by policy. See the VHA HANDBOOK 1004.02 section on Advance Directives:

http://vaww1.va.gov/vhapublications/ViewPublication.asp?pub_ID=2042

Creating Post-Signature Alerts Based on Progress Note Title

The Create Post-Signature Alerts [TIUFPC CREATE POST-SIGNATURE] option in the Document Definitions (Manager) [TIUF DOCUMENT DEFINITION MGR] menu allows clinicians and providers to create progress notes that automatically generate a notification (alert) to designated recipients based on the progress note title. This enables immediate communication of time-sensitive patient information to designated individuals or groups. These alerts are specific to each VA Medical Center.

To create or edit a Post-Signature Alert:

1. Select the Create Post-Signature Alerts [TIUFPC CREATE POST-SIGNATURE] option in the Document Definitions (Manager) [TIUF DOCUMENT DEFINITION MGR] menu.
2. At the "Select TIU DOCUMENT DEFINITION NAME" prompt, enter the progress note title that will generate the alert. Typing "???" and then pressing Enter provides a list of titles already available in VistA.

If an alert is already associated with this title, then the existing Post-Signature code is displayed—continue to Step 3. If there is no existing alert associated with the title, skip to Step 4.

3. If an alert is already associated with the selected title, then the Post-Signature code is displayed and the "Do you want to change the Code? (YES or NO)? NO// " prompt is displayed.

Enter "YES" if you wish to change the code, and then complete the remaining steps in this procedure. Enter "NO" to retain the current code. The "Enter <RETURN> for another TIU Document Definition Name or '^' to exit" prompt displays and you have the option to enter another title (returning you to Step 2) or exit "Enter Post-Signature Code for Alert."

```

Enter Post-Signature Code for Alert
=====

Select TIU DOCUMENT DEFINITION NAME: RESTRAINT
  1  RESTRAINT PROGRESS NOTE AND EVERY TWO HOUR FLOW SHEET      TITLE
    Std Title: SECLUSION RESTRAINT NOTE
  2  RESTRAINT 12-8 RESTRAINT DOCUMENTATION 1:1 OR SOFT - 12-8
    TITLE
  3  RESTRAINT 8-4 RESTRAINT DOCUMENTATION 1:1 OR SOFT - 8-4
    TITLE
  4  RESTRAINT 4-12 RESTRAINT DOCUMENTATION 1:1 OR SOFT 4-12
    TITLE
  5  RESTRAINT BEHAVIOR RESTRAINT DOCUMENT 12-8      TITLE
    Std Title: NURSING SECLUSION RESTRAINT NOTE
Press <Enter> to see more, '^' to exit this list, OR
CHOOSE 1-5: 1  RESTRAINT PROGRESS NOTE AND EVERY TWO HOUR FLOW SHEET
    TITLE
        Std Title: SECLUSION RESTRAINT NOTE

The POST-SIGNATURE Code in 'RESTRAINT PROGRESS NOTE AND EVERY TWO HOUR
FLOW SHEE
T' was created by this option.
It is --> D EN^TIUPSCA("G.BCMA DUE LIST ERRORS","AUTOPRT","")

Do you want to change the Code? (YES or NO)? NO// YES

```

4. At the "Choose RECIPIENTS to receive the alert (N/I/G/T) or '^' to exit" prompt, select the recipients who will receive the alert every time this note title is used. Choosing I, G, or T enables you to define which individual(s) or group(s) will receive the alert.

- N/A – Select if you do not want to specify an Individual User, Mailgroup, or Team List to receive the alert.
- Individual User – A single defined person will receive the alert.
- Mailgroup – An established mailgroup will receive the alert.
- Team List – An established team list will receive the alert.

NOTE: Do not use mailgroup or team list names containing special characters other than parentheses "(") or asterisks "*". Use of other special characters might result in an alert not being received by the intended recipients.

```

Select one of the following:

      N          N/A
      I          INDIVIDUAL USER
      G          MAILGROUP
      T          TEAM LIST (OE/RR with Queued Alert)

Choose RECIPIENTS to receive the alert (N/I/G/T) or '^' to exit: G
MAILGROUP
Select MAIL GROUP NAME: BCMA DUE LIST ERRORS

```

5. At the "Choose an alert ROUTINE from the above listing:" prompt, set the alert routine to run when this title is used.

- N/A – Use when no conditional alert is needed; the alert will be sent only to the recipients designated in Step 4.

NOTE: If you select N/A both here and in Step 4, then you will be provided with an option to delete the Post-Signature code associated with this title (including pre-existing code) or to cancel this code change (which retains any pre-existing code).

- PCP – Sends the alert to the Primary Care Provider designated for each patient.
- AUTOPRT – Use to auto-print to the printer designated as the chart copy print device at the patient's location.

6. The “DEVICE NAME (Optional) for Paper Alert:” prompt displays if either PCP or AUTOPRT was selected in the previous step. This is an option to generate a printout containing the patient's name and the progress note title, which is useful to notify clinicians who are not at their computer when the note is entered. Pressing Enter sends the printout to a default printer.

NOTE: Do not use device names containing special characters other than parentheses "(") or asterisks "*". Use of other special characters might result in an alert not being received by the intended recipients.

```
1) N/A- No Conditional Alert is needed
2) PCP- Include patient's Primary Care Provider from PCMM as a recipient
3) AUTOPRT- Generate message to chart copy printer at encounter location
```

Choose an alert ROUTINE from the above listing: (1-3): 3

DEVICE NAME (Optional) for Paper Alert:

7. The code that will be generated based on your selections is displayed for confirmation. Type YES to accept the code. Type NO to return to the initial Create Post-Signature Alert screen—this will discard your previously entered selections.

```
The Post-Signature code for 'RESTRAINT PROGRESS NOTE AND EVERY TWO HOUR FLOW SHEET' will be set as follows...
POST-SIGNATURE CODE: D EN^TIUPSCA("G.BCMA DUE LIST ERRORS","AUTOPRT",")
```

```
Do you want to update Post-Signature Code into 'RESTRAINT PROGRESS NOTE AND EVERY TWO HOUR FLOW SHEET'? NO// YES
```

```
The Post-Signature code for 'RESTRAINT PROGRESS NOTE AND EVERY TWO HOUR FLOW SHEET' has been updated as follows...
POST-SIGNATURE CODE: D EN^TIUPSCA("G.BCMA DUE LIST ERRORS","AUTOPRT",")
```

The progress note title with the defined parameters to create an alert is now available. When a user creates and signs a new progress note using this title, the designated recipients will receive an alert.

Statistical Reports

Use this menu to produce statistical reports for line counts and timeliness by Author, Transcriptionist, or Service.

NOTE: These reports are designed for a margin width of 132.

Option	Description
TRANSCRIPTIONIST Line Count Statistics	This option allows generation of statistical reports of line counts and timeliness data by transcriptionist (or the person who entered the document).
SERVICE Line Count Statistics	This option allows generation of statistical reports of line counts and timeliness data by SERVICE (e.g., Medical Service, Surgical Service, Psychiatry Service, etc.).
AUTHOR Line Count Statistics	This option allows generation of statistical reports of line counts and timeliness data by AUTHOR (or Dictating practitioner).

Unsigned/Uncosigned Report

Lists detailed document information such as author, patient, patient SSN, etc. for notes with no signature and/or cosignature. Optionally, a summary report can be generated showing the number of unsigned and uncosigned documents in each service.

In the following example, a summary report is generated for all divisions:

```
Select Text Integration Utilities (MIS Manager) Option: 6 Unsigned/Uncosigned
Report
Select division: ALL// <Enter>

Please specify an Entry Date Range:

  Start Entry Date: T-180 (AUG 08, 2003)
  Ending Entry Date: T (FEB 04, 2004)

Select service: ALL// <Enter>

  Select one of the following:

      F          FULL
      S          SUMMARY

Type of Report: S SUMMARY

DEVICE: HOME// <Enter> ANYWHERE

                Unsigned and Uncosigned Documents Aug 08, 2003 thru Feb 04, 2
004@23:59:59Page 1
PRINTED:                for SALT LAKE CITY HCS
FEB 04, 2004@09:16
-----

Totals for Service: IRM--- UNSIGNED: 1  UNCOSIGNED: 0

Totals for Division: SALT LAKE CITY HCS--- UNSIGNED: 1  UNCOSIGNED: 0

Enter RETURN to continue or '^' to exit:
```

Missing Text Report

This report lists TIU Documents that do not have any report text, are missing the 0 node of the text node, or both cases. The report results have the following categories:

Missing Text Only. This means the note has a 0 TEXT node, but no text (and this can be fine depending on the status of the document, such as undictated).

Missing 0 Node Only. This means the note has text but no 0 TEXT node.

Missing 0 node & Text. This means the note doesn't have a 0 TEXT node or text.

This cause of this condition is unknown and has only been reported from a few sites. Nevertheless, this report should be run by all sights. If any missing text documents are found, refer to the discussion under Missing Text Cleanup below for guidance.

The report can be run as often as needed to track the occurrences of documents without text and missing the 0 text node. It is advised to run the report on a regular interval (once per week or month) to track an increase or decrease of reported documents missing text or the 0 text node.

A delimited form of the report can be provided for users who want to put the report into a spreadsheet program.

In the following example a report is generated starting June 1, 2004:

```
Select Text Integration Utilities (MIS Manager) Option: ?

 1 Individual Patient Document
 2 Multiple Patient Documents
 3 Print Document Menu ...
 4 Search for Selected Documents
 5 Statistical Reports ...
 6 Unsigned/Uncosigned Report
 7 Missing Text Report
 8 Missing Text Cleanup
 9 Signed/unsigned PN report and update
10 UNKNOWN Addenda Cleanup
11 Missing Expected Cosigner Report

Missing Text Cleanup

Note: The TIU MISSING TEXT REPORT should be run prior to running the cleanup. Refer to the documentation on the previous page for TIU MISSING TEXT REPORT for cause and frequency to run that report.

This is a utility designed to help clean up TIU documents with no text. Before using this utility, a number of other things should be tried. They are:

- NO TEXT in DOCUMENT body with no attached addendum or image, document may or may not have the "TEXT" 0 node as indicated by the report. Delete or retract the document (based upon status); no disclaimer is needed.
- If the "TEXT" 0 node is missing as indicated by the report and the document has text:
 - For direct entry documents, contact author to make an addendum to the note and add the missing information. Sites may determine the allowable timeframe to permit the author entering the addendum with the missing information. If the author is no longer at the site or the timeframe has passed, the HIMS Manager or designee should enter an addendum with the following disclaimer:

"DISCLAIMER: This completed document contains missing text that was electronically deleted in error"

- For uploaded documents, contact the transcription company to re-upload if possible or contact the author to make an addendum to the note and add the missing information.

The cleanup utility retracts documents within a date range that meet certain criteria. The criteria are:

- Document may be of any type, including ADDENDUM with a STATUS of UNCOSIGNED/COMPLETED/AMENDED
- Document must fall within user entered date range
- Document must NOT have the "TEXT",0 node
- Document must NOT have any TEXT
- Document must NOT have any addenda ("DAD" cross-reference)
- Document must NOT have any components ("ADI" cross-reference)

An informational alert is sent once the cleanup process is finished.

In the following example, the cleanup process is run for documents in a one month period:

```
Select Text Integration Utilities (MIS Manager) Option: ?
1      Individual Patient Document
```

- 2 Multiple Patient Documents
- 3 Print Document Menu ...
- 4 Search for Selected Documents
- 5 Statistical Reports ...
- 6 Unsigned/Uncosigned Report
- 7 Missing Text Report
- 8 Missing Text Cleanup
- 9 Signed/unsigned PN report and update
- 10 UNKNOWN Addenda Cleanup
- 11 Missing Expected Cosigner Report

Enter ?? for more options, ??? for brief descriptions, ?OPTION for help text.

Select Item(s): Quit// 4
Select Action: Attach to Parent// <Enter>

Attach the following UNKNOWN Addenda:

TIU Doc No.	Patient	Entry DT/Time	Status	Parent
2238	CPRSPATIENT,T (C5525)	10/14/04@11:56:14	UNSIGNED	None

to the following OPERATION REPORT?

TIU Doc No.	Patient	Entry DT/Time	Status	Surgical Case No.
2195	CPRSPATIENT,T (C5525)	09/29/04@08:18:39	COMPLETED	#89

Do you wish to begin attaching? NO// Y YES
Attaching #2238 to #2195 ... success!
Press <RETURN> to continue

Note: Be sure to verify any addenda before attaching to a parent document. Many addenda are duplicates of the original Operation Report and may be deleted once they are verified as UNSIGNED copies.

Only one document may be selected as the potential parent to the previously selected addenda.

Users may NOT attach addenda to a parent OPERATION REPORT with a different patient or an OPERATION REPORT whose ENTRY DATE/TIME falls after the addenda.

Once a parent document has been selected, a confirmation screen will display the selected addenda and parent information and prompt the user to begin attaching the documents.

After the utility attempts to associate the addenda with a parent Operation Report the user will be returned to the initial List Manager display with successful associations being listed under the "Parent" column showing the TIU Document number of the parent that has been assigned. These documents will no longer appear once the current session is closed or a new search is initiated via the CHANGE VIEW option.

Missing Expected Cosigner Report

List detailed document information for notes that have a status of “uncosigned” where the expected cosigner field is either null, 0 or -1. Users will have a choice of 3 different report formats: an 80 column standard report, a 132 column extended report and a “^” delimited report for use in exporting the data to Excel. The 80 column report will include Patient Name (initials and last 4 of SSN), Entry Date/Time, Author, Title, and the Note IEN. The 132 column report and the “^” delimited report will include Patient Name (initials and last 4 of SSN), Entry Date/Time, Author, Title, Author’s Service/Section, Author’s Job Title and the Note IEN. In either case if the document is an Addendum then the parent’s Document Type, Entry Date/Time and Expected Cosigner will also be displayed. The cause of the problem is being fixed in CPRS patch OR*3.0*215. Users should review the notes displayed on this report to determine who should be the expected cosigner and then enter the expected cosigner. Once a note is signed the software doesn't permit editing so they will need to use FileMan. The author of the note may need to be contacted to determine who should be the expected cosigner.

In addition this report may be setup in Taskman to be run nightly. The entry point for this is NITE^TIU189. This task will look for notes missing an expected cosigner and send an email to the mail group TIU MIS ALERTS. This email will include Patient Name (initials and last 4 of SSN), Entry Date/Time, Author, Title, Author’s Service/Section, Author’s Job Title, Note IEN and if the note is an addendum the parent’s Document Type, Entry Date/Time and Expected Cosigner.

Example 80 column report:

```

OR '^' TO QUIT:
```

Mismatched ID Notes

The option TIU MISMATCHED ID NOTES is under the TIU MAIN MENU MGR, and it runs a routine that will report/fix mismatched interdisciplinary (ID) notes. There are cases where a child ID note points to a parent ID note and that parent ID note is for a different patient. There are also cases where the GDAD cross reference links a child ID note to a parent ID note when in fact the child does not point to the parent. In these cases, the situation will be reported/fixed. If it is found that there is a child ID note pointing to a parent that may not be an ID note, this will be reported but not fixed.

When this report is run in Report Only mode the report looks like the first example. When this report is run in Report and Fix mode the report looks like the second example.

When this report is run in either Report Only mode or in Report and Fix mode an email will be sent to the PSI-06-030 mail group on Forum. This email will contain ONLY the site, the date, the report mode and the result totals. No patient data of any kind is sent. The purpose of this is to track the extent of this problem. Note that the emails do not report the count of: CHILD ID NOTES POINTING TO A PARENT THAT MAY NOT BE AN ID NOTE.

Example of Report Only mode:

```
MISMATCHED INTERDISCIPLINARY NOTES

TIU 215 ANALYSIS

A problem has been found with VistA patch TIU*1.0*215, released June 28, 2007. One of the intents of this patch was to only allow editing/amending etc. from the Surgery package to keep the Surgery file (#130) and TIU files in sync. This was for the Nurse Intraoperative Report (NIR) and the Anesthesia Report only. However, if surgery personnel made changes to a surgery case using one of the case editors such as OSS Operation (Short Screen) [SRROMEN-OUT], they were asked if they wanted to create an addendum. After installation of TIU*1.0*215, the addendum was not created for viewing via the Surgery Tab in CPRS, however, the data was being updated in the Surgery application files.

A new option, TIU 215 ANALYSIS, is set up with installation of patch TIU*1.0*231 and is being added as sequence 14 to the TIU MAIN MENU MGR option.

TIU MAIN MENU MGR	Text Integration Utilities (MIS Manager)
TIU 215 ANALYSIS ...	
A	ANALYZE POTENTIAL SURGERY TIU PROBLEMS
V	VIEW SINGLE SURGERY CASE USING CASE #
T	SEND ANALYSIS OUTPUT TO TEXT FILE

Option A - Analyze Potential Surgery TIU Problems:

Allows for the analysis process (which was run during the installation of this patch) to be run again. Surgery cases will be analyzed within a particular date range and the information from NIR and/or Anesthesia reports will be compared to their corresponding TIU notes. If the information does not match, the case number will be recorded as one that needs to be reviewed. The information generated by this option should be printed, either by cutting and pasting the results into a text file, or you can simply print the MM that was generated during installation. It can be used to identify which TIU records have addenda and which do not. This is extremely important as how a comparison is handled depends directly on if the TIU record has addenda. It can also be used as a checklist, to make sure that every record in question is examined.

Option V - View the Contents of a Surgery Case Using Case #:

Views the content of a Surgery Case file (#130). NIR data will be displayed followed by the Anesthesia data.

Option T - Send Output To Text File:

Sends output to a Host text file on your production account's server. This will be very useful for sites that have a large number of cases to review. Microsoft Word can then be used to compare the text files, which is extremely helpful because discrepancies are automatically highlighted, thus expediting the comparison process.

Option T Overview:

Option T will send data from both Surgery and TIU to respective output files. First, the user is prompted for a path to send output files to which should look something like this: USER\$:[<directory name>] . You may need to coordinate with your local IRM Vista system administrator to determine exactly what the path should be. The user is then prompted for three filenames; one for Surgery output, one for TIU output, and one for associated TIU addenda. If the path and/or filenames are invalid you will be prompted to enter them again.

Option T will use the same analysis technique as Option A does. Instead of just listing cases that need review, it will write the contents of the associated reports to text files. For each case, what is on record in Surgery will be written to one file, and what is on record in TIU will be written to another file. Also, if there are any associated TIU addenda with the case, these addendums will be written to a separate file. Multiple cases will be written to a single file, with the user pre-defining the maximum limit. When this limit is encountered, a new set of output files will be created. For instance, if there are a total of 50 cases found with possible discrepancies, and the user sets a maximum of 25 cases per file, then 2 Surgery output files will be created, two TIU output files, and x number of addenda output files. **Note:** The number of Surgery and TIU files will always be the same; the number of addenda files may not. This is due to the fact not every Surgery case will have an associated TIU addenda). Let's say the names "Surgery", "TIU", and "ADDENDA" are used for the output filenames. You would then have: Surgery1.txt, Surgery2.txt, TIU1.txt, TIU2.txt, and ADDENDA1.txt (and possibly ADDENDA2.txt), each with 25 cases per file.

*******IMPORTANT*****IMPORTANT*******
NOTE!!!! The host files created in option T contains Patient Information and should only be sent to a server within the system boundary of the VA. The directory must be password protected. If you are going to download to a pc and use the Microsoft Word Compare feature for analysis, it must be a VA approved encrypted PC. Both the host files and the files downloaded to the pc must be destroyed by an approved means when analysis/correction is complete. When the files are destroyed the systems manager, official, or the ISO should be notified they have been destroyed.
*******IMPORTANT*****IMPORTANT*******

CORRECTION PROCESS

The following manual fix process is provided by the Surgery Enterprise Product Support(EPS) personnel:

The Surgery ADPAC should review the reports. Health Information Management (HIM) personnel should also be involved in this process. If the programmer feels comfortable in restoring the data in the Surgery package to what it was originally, then the programmer can, with the help of the Surgery ADPAC do it, but we would encourage the site to enter a Surgery Remedy ticket, and we will step the site through the process.

The programmer would edit the fields in the Surgery Case file (#130) that should be restored to their original data using FileMan enter/edit.

For the NIR, once the cases that need fixing are restored to their original data set(see examples one and two), one of the circulating nurses listed in the case, with the assistance of the Surgery ADPAC, should use the Surgery package to put the changes back into the cases and sign the addenda (see Options used to reenter the data in Surgery).

Similarly for the Anesthesia Report, once the cases that need fixing are restored to their original data set (see examples one and two), the anesthetist with the assistance of the Surgery ADPAC, should use the Surgery package to put the changes back into the cases and sign the addenda (see Options used to reenter the data in Surgery).

Example ONE using FileMan:

Step One:

```
Select OPTION: 1 ENTER OR EDIT FILE ENTRIES
INPUT TO WHAT FILE: SURGERY//
EDIT WHICH FIELD: ALL// ANESTHESIA TECHNIQUE (multiple)
EDIT WHICH ANESTHESIA TECHNIQUE SUB-FIELD: ALL//
THEN EDIT FIELD:

Select SURGERY PATIENT: `30536 TIUPATIENT, FOUR 08-18-07 TOE
X-XX-XX XXXXXXXX YES SC VETERAN GJ

Select ANESTHESIA TECHNIQUE: GENERAL// @
SURE YOU WANT TO DELETE THE ENTIRE 'G' ANESTHESIA TECHNIQUE? Y (Yes)
Select ANESTHESIA TECHNIQUE:
```

Step Two:

THEN IN SURGERY ADD THE GENERAL ANESTHESIA TECHNIQUE BACK IN USING ONE OF THE SURGERY OPTIONS LISTED IN THE SECTION "OPTIONS USED TO RE-ENTER DATA IN SURGERY".

Example TWO using FileMan:

TIU HAS "CLEAN" FOR WOUND CLASSIFICATION BUT SURGERY HAS "CONTAMINATED"

STEP ONE:

```
Select OPTION: 1 ENTER OR EDIT FILE ENTRIES

INPUT TO WHAT FILE: SURGERY//
EDIT WHICH FIELD: ALL// WOUND CLASSIFICATION
THEN EDIT FIELD:

Select SURGERY PATIENT: `30506 TIUPATIENT,TWO 12-31-06 BAD FINGER
X-XX-XX XXXXXXXX YES SC VETERAN GJ
WOUND CLASSIFICATION: CONTAMINATED// CLEAN
1 CLEAN
```

2 CLEAN/CONTAMINATED
 Choose 1-2: 1 CLEAN

STEP TWO:

NOW REENTER 'CONTAMINATED' IN SURGERY USING ONE OF THE OPTIONS USED TO RE-ENTER DATA INTO SURGERY AND IT WILL GENERATE AN ADDENDUM FORTIU

Options used to reenter the data in Surgery.

Transcription Billing Verification Report

This report can be run by division and provides information on all transcriptionists or one or more selected transcriptionists. It reports based on an entered date range. Since the VBC Line Count is only calculated for transcribed reports, it does not report on any document transcribed before the patch was installed.

The accuracy of this report depends on the accuracy of the data. Specifically, it depends on whether transcriptionists are reliably recorded in the header of each document. If you choose to use this report, you should follow the directions in the *Text Integration Utilities (TIU) Line Count (TIU*I*250) Release Notes* available from the VA Document Library (<http://www4.va.gov/vdl/>) to insure that each uploaded document has the needed data.

This example is a complete report for all facilities on the local VistA system for the month of August:

Chapter 6: TIU for Transcriptionists

Transcriptionists typically enter Providers' discharge summaries, progress notes, or other documents:

1. directly from dictation, or
2. from uploaded transcribed ASCII documents in batch mode
 - a. from remote microcomputers, using ASCII or KERMIT protocol upload, or
 - b. from Host Files (i.e., DOS or VMS ASCII files) on the host system.

Options on this menu can be assigned accordingly.

Transcriptionist Menu

Option Name	Description
Enter/Edit Discharge Summary	This option allows you to enter or edit discharge summaries and progress notes directly online. If the transcriptionist holds the AUTOVERIFY security key, each discharge summary will be verified automatically when the transcriptionist releases it.
Enter/Edit Document	This option allows you to enter/edit clinical documents directly online.
Upload Menu ...	This menu includes options to upload batches of documents, and to get help on the header formats for the various documents which have been defined for upload by your site.
List Documents for Transcription	Gets all UNDICTATED and UNTRANSCRIBED Documents for review, edit, and signature.
Review/Edit Document	Allows the user to interactively review, edit, and/or print documents.
Transcription Billing Verification Report	This option produces a report for the verification of transcription bills, using the Visible Black Character counting method described in VHA Directive 2008-042.

Enter/Edit Discharge Summary

Use this option to enter and edit discharge summaries directly online.

Steps to use option:

1. Select *Enter/Edit Discharge Summary* from the Transcriptionist Menu.

```

Upload Menu

The Upload Menu contains options that allow the transcriptionist to upload a batch of clinical documents.

Option Name	Description
Upload Documents	This option allows transcriptionists to upload transcribed ASCII documents in batch mode, either from remote microcomputers, using ASCII or KERMIT protocol upload, or from Host Files (i.e., DOS or VMS ASCII files) on the host system. Your site may define the preferred file transfer protocol and the destination within VistA to which each report type (e.g., discharge summary, progress notes, Operative Report, etc.) should be routed.
Help for Upload Utility	This option displays information on the formats of headers for dictated documents that are transcribed off-line and uploaded into VISTA. It also displays “blank” character, major delimiter, and end of message signal as defined by your site.

The upload utility permits mixed report types within a single batch. This allows the transcriptionist to enter each report in arrival sequence into a single ASCII file on the remote computer (e.g., using a proprietary word-processing program), and to transmit the text to the VistA host system as a one-step process. As this ASCII data arrives at the VistA host, it is read into a “buffer” file, and stored for subsequent “filing” by a special background process, called the “Router/filer.”

The Router/filer is queued upon completion of transmission of a given batch of reports, and will proceed to “read” each line of the buffer file, looking for a header. When a header is encountered, the filer will determine whether the record corresponds to a known report type, as defined by your site, and if so, it will attempt to direct the record to the appropriate file and fields in VistA.

On occasion, the Router/filer will not be able to identify the appropriate record in the target file, and will, therefore, be unable to file the record. When this happens, the process will leave the record in the buffer file and send an alert to the user who invoked the upload utility, and to a group of users identified by the site as being able to respond to such filing errors.

Upload Menu cont'd

When *any* of the alert recipients chooses to act on one of these alerts (by entering “VA” at any menu prompt, and choosing the alert on which they wish to act), they will be shown the header of the failed record, and allowed to inquire to the patient record, before being presented with their preferred VistA editor, and will then be allowed to edit the buffer (e.g., correct a bad social security number, admission date, etc.) and retry the filer. With each attempt to correct the buffered data and retry the filer, all alerts associated with that batch will be deleted (and if the condition remains uncorrected, re-sent), until all records in the batch are successfully filed.

Batch Upload Reports

Kermit Protocol Upload

If your site is using the upload option to transfer batches of discharge summaries from a remote computer using the Kermit transfer protocol, start the upload process by following the sequence below:

1. Choose UP from your Upload Menu.

```
You are currently logged into DIVISION: SALT LAKE CITY HCS

If a hospital location cannot be determined for an uploaded
document, the document's division may be loaded with your log-in
division.

  1      Upload Documents
  2      Help for Upload Utility

Select Upload Menu Option: UP  Batch upload reports

                        K E R M I T   U P L O A D
Now start a KERMIT send from your system.
Starting KERMIT receive.
#N3
```

Note: When entering the Upload Menu you receive a warning which specifies which division you are logged into. If division information is not explicitly available in the header, then it uses division information from your most current login. To change this division without re-logging in, you can use the XUSER DIV CHG option from the TBOX menu.

2. When you see the #N3 prompt, initiate the Kermit file transfer from your computer. Try the default settings for the Kermit protocol as provided by your terminal emulation software. If you have problems, consult your terminal emulator user manual or contact your local IRM Service.

3. When the transfer is complete, you'll see this message:

```
File transfer was successful. (1515 bytes)
Filer/Router Queued!
Press RETURN to continue...<Enter>
  1      Upload Documents
  2      Help for Upload Utility
Select Upload menu Option: <Enter>
```

ASCII Protocol Upload

If your site is using the upload option to transfer batches of discharge summaries from a remote computer using the ASCII transfer protocol, start the upload process by following the example shown below:

1. Choose UP from your Upload Menu.

```
  1      Upload Documents
  2      Help for Upload Utility

Select Upload menu Option: UP  Batch upload reports

A S C I I   U P L O A D
```

Note:

If you are at a site that uses multiple divisions, you will receive a warning at this time specifying which division you are logged into. If division information is not explicitly available in the header, then it uses division information from your most current login. To change this division without re-logging in, you can use the XUSER DIV CHG option from the TBOX menu.

2. When the “Initiate upload procedure:” prompt appears, initiate the ASCII file transfer from your computer.

NOTE:

If you have problems, consult your local IRM Service to see if the Terminal and Protocol Set-up parameters have been set up as shown in the Implementation and Maintenance Section of the TIU Technical Manual, or check the user manual for your terminal emulator.

```
Initiate upload procedure:
$HDR:                                DISCHARGE SUMMARY

Filer/Router Queued!

      1      Upload Documents
      2      Help for Upload Utility

Select Upload menu Option: <Enter>

In the example above, notice that patient One TIUPatient had no admission on
11/17/96, so the filer could not create a record in the target file for this
discharge summary record. The user acts on the alert to correct the admission
date as 11/16/96, and retries the filer, which is now able to file the record
appropriately, and the alerts are removed for all recipients.
```

Avoiding Upload Errors

TIU uses header information to file uploaded notes in the TIU Document File (#8925). Naturally, if this information is inaccurate, then either a filing error is generated or the note is filed incorrectly.

Note: **Certain errors in the upload header can cause the upload routine to file the note incorrectly. This is a patient safety issue, so the accuracy of captions should be verified where possible.**

Each type of document has a different set of upload captions and, in some cases, a different upload routine. Each routine tries to avoid incorrect filing of notes by cross-checking the patient information and dates with other information such as the consult number or surgery case number. Some types of documents have unique fields to assist the upload program in accomplishing these cross checks and/or to file the document.

A missing field error is generated either when a required field is missing, or a field does not match the example data given in the Upload Help Display (see **Display Upload Help** below).

The following table gives information on required fields and the cross-checks performed on fields for several document classes:

Type of Document	Caption	Use
PROGRESS NOTES	SSN	Required by filing routine
	VISIT/EVENT DATE	Required by filing routine. The patient record indicated by the SSN is checked for a matching visit or event.
	TITLE	Required by filing routine
	LOCATION	Required by filing routine
	AUTHOR	Generates missing field error
	DATE/TIME OF DICT	Generates missing field error
DISCHARGE SUMMARY	PATIENT SSN	Required by filing routine
	DATE OF ADMISSION	Required by filing routine. The patient record indicated by the SSN is checked for a matching admission date.
	DICTATED BY	Generates missing field error
	DICTATION DATE	Generates missing field error
	ATTENDING PHYSICIAN	Generates missing field error
	URGENCY	Generates missing field error

Type of Document	Caption	Use
CLINICAL PROCEDURES	SSN	Required by filing routine
	TITLE	Required by filing routine. This is the name of the procedure. The patient record indicated by the SSN is checked for a matching procedure.
	VISIT/EVENT DATE	Required by filing routine. The patient record indicated by the SSN is checked for a matching visit or event.
	CONSULT REQUEST NUMBER	Required by filing routine. The patient record indicated by the SSN is checked for a matching consult, that the consult is a clinical procedure, and that results are available for interpretation.
	TIU DOCUMENT NUMBER	Only required by filing routine when an incomplete CP document has been attached by the CPUser program. In this case, the consult request is checked for a matching TIU Document Number.
	DATE/TIME OF DICTATION	Required by filing routine
	LOCATION	Required by filing routine
	AUTHOR	Generates missing field error
	CONSULTS	SSN
TITLE		Required by filing routine
CONSULT REQUEST NUMBER		Required by filing routine. The patient record indicated by the SSN is checked for a matching consult.
VISIT/EVENT DATE		Required by filing routine. The patient record indicated by the SSN is checked for a matching visit.
AUTHOR		Generates missing field error
LOCATION		Required by filing routine
DATE/TIME OF DICTATION		Generates missing field error

Type of Document	Caption	Use
PROCEDURE REPORT	PATIENT SSN	Required by filing routine
	DOCUMENT NUMBER	Required by filing routine. If missing, the upload routine infers it from the SSN and Operation Date (an optional field).
	SURGICAL CASE	Required by filing routine. If missing, the upload routine infers it from the SSN and Operation Date. Then, if there is more than one matching surgical case, it generates a missing field error.
	DICTATION DATE	Generates missing field error
	ATTENDING SURGEON	Generates missing field error
	DICTATED BY	Generates missing field error
OPERATION REPORT	PATIENT SSN	Required by filing routine
	DOCUMENT NUMBER	Required by filing routine. If missing, the upload routine infers it from the SSN and Operation Date (an optional field).
	SURGICAL CASE	Required by filing routine. If missing, the upload routine infers it from the SSN and Operation Date. Then, if there is more than one matching surgical case, it generates a missing field error.
	DICTATION DATE	Generates missing field error
	DICTATING SURGEON	Generates missing field error
	ATTENDING SURGEON	Generates missing field error
	STAT or ROUTINE	Generates missing field error

Display Upload Help

Transcriptionists may select this option in the Upload Menu to display the formats expected by the upload process for the report types defined at your site.

The captioned headers may be captured as ASCII data and used to build macros using a commercial word-processors (e.g., WordPerfect or Microsoft Word), thereby avoiding having to retype the captioned headers, while minimizing the risk of spelling errors or inconsistencies with the formats expected by the host system.

Multiple Patient Documents

Use this option to see a list of clinical documents for more than one patient in TIU. You can specify types, categories, and time range.

Caution: Avoid making your requests too broad (in statuses, search categories, and date ranges) because these searches can use a lot of system resources, slowing the computer system down for everyone. The example below would probably be too broad in a large hospital.

Steps to use option:

1. Select *Multiple Patient Documents* from your TIU menu.

--- Remote User Menu ---

- 1 Individual Patient Document
- 2 Multiple Patient Documents

Select Text Integration Utilities (Remote User) Option: **2** Multiple Patient Documents

2. Enter a status.

```
Select Status: COMPLETED// all   undictated  untranscribed  unreleased
                                     unverified  unsigned      uncosigned
                                     completed   amended     purged       deleted
```

3. Select a document type (such as Discharge Summary, Progress Notes, Addendum).

```
Select Clinical Documents Type(s): All Discharge Summary, Progress Notes,
Addendum
```

4. Select one of the following search categories

1	All Categories	6	Patient	11	Transcriptionist
2	Author	7	Problem	12	Treating Specialty
3	Division	8	Service	13	Visit
4	Expected Cosigner	9	Subject		
5	Hospital Location	10	Title		

Enter selection(s) by typing the name(s), number(s), or abbreviation(s).

```
Select SEARCH CATEGORIES: AUTHOR// all   All Categories

Chapter 8: Progress Notes Print Options

Clinicians can print progress notes but most printing is geared towards MAS and managing this function on a medical center level.

TIU offers two methods of printing documents:

1. Print actions on option screens: Clinicians may print all types of documents using a variety of methods from the List Manager interface for TIU, including Progress Notes, Discharge Summaries, Consults, etc. Work and chart copies are possible. Chart copies are the recommended type of printed copy, but many sites still want to print work copies. For example, you may want to print work copies of unsigned notes.

Other than the above List Manager printing, all other print options are on print menus. Only signed notes are available from these options.

2. Progress Notes Print Menus

Progress Notes Print Menu

For many types of users: clinical, administrative, management.

MAS Options to Print Progress Notes

For printing at the Wards and Clinics, both by individual patient and batch printing.

Progress Notes Print Menu

All of the options on this menu support the printing of chart or work copies.

 **NOTE:** The location print option prints for any location that has signed notes entered for it, but it doesn't track anything.

Option	Description
Author– Print Progress Notes	This option produces chart or work copies of progress notes for an author, for a selected date range.
Location– Print Progress Notes	This option prints chart or work copies of progress notes for all patients who were at a specific location when the notes were written. The patients whose progress notes are printed on this report may not still be at that location. If Chart Copy is selected, each note will start on a new page.
Patient– Print Progress Notes	This option prints or displays progress notes for a selected patient by a selected date range.
Ward– Print Progress Notes	This option allows you to print progress notes for all patients who are now on a ward for a selected date range. This option is only for ward locations. NOTE: Copies can only be printed to a printer, not to a computer screen.

MAS Options to Print Progress Notes

The MAS options are intended for printing at the Wards and Clinics, both by individual patient and batch printing.

Option	Description
Admission- Prints all PNs for Current Admission	This option prints all progress notes for a selected patient for the current admission if patient is an inpatient or LAST admission if the patient has been discharged.
Batch Print Outpt PNs by Division	This option batch prints outpatient progress notes in terminal digit order by division. Locations that the site would like excluded from this job may edit field #3 in file #8925.93. If the location is not entered in file #8925.93, it WILL be included.
Outpatient Location- Print Progress Notes	This option is designed to be used primarily by MAS. It produces CHARTABLE notes and tracks the last note printed for the selected outpatient location. Output is sorted in alphabetical order by patient.
Ward- Print Progress Notes	This option allows the printing of Progress Notes for ALL patients on the ward at the time the job is queued to print. All of the notes for a selected date range (regardless of the location of the note) will print. This option is only for WARD locations. NOTE: Copies can only be printed to a printer, not to a computer screen.

Ward-Print Progress Notes Example

This option is usually used by the night ward clerk. The output is in RM/BED order to facilitate filing. It prints all notes after the last time they were printed, and for ALL current inpatients on the ward, regardless of whether the location of the note is that ward, a nice feature for transferred patients or patients with outpatient clinic appointment notes. **This print option requires that you specify a printer; you can't print to the screen.**

Print by Ward is designed to support batch printing. It has the unique ability to determine when the last note was printed so that sites can now capture the infamous "orphan" note which was a problem under Progress Notes 2.5. A new page is started for each patient.

Chapter 9: Managing TIU: Introduction

TIU is managed through use of the following tools:

- Menu assignments
- Parameter set-ups
- Document Definitions
- User Class set-up

See the *TIU Implementation Guide* for more detailed instructions on performing these various set-ups.

TIU Maintenance Menu

Option Name	Menu Text	Description
TIU PARAMETERS MENU	TIU Parameters Menu	This option allows the Clinical Coordinator or IRMS Application Specialist to set up either the Basic or Upload Parameters for TIU
TIUF DOCUMENT DEFINITION	Document Definitions	Document Definitions menu, which includes: Edit Document Definitions Sort Document Definitions Create Document Definitions Create Objects Create Post-Signature Alerts
USR CLASS MANAGEMENT MENU	User Class Management	Menu of options for managing User Class Definition and Membership
TIU IRM TEMPLATE MGMT	TIU Template Mgmt Functions	Menu options for managing pre-defined templates created by your medical center.
TIUHL7 Message Manager	TIUHL7 MSG MGR	Utility for viewing message going in and out of the TIU Generic HL7 Interface.
TIU TEXT EVENT EDIT	Text Event Edit	Menu option to set up a text event in the TIU TEXT EVENTS file (#8925.71) so that an alert will be sent to the team(s) specified in the TIU TEXT EVENTS file immediately after a TIU document (progress note, consult, etc.) is created and signed.

TIU ABBV ENTER EDIT	TIU Unauthorized Abbreviation (Enter/Edit)	Allows local sites to enter/edit their LOCAL unauthorized abbreviation(s) in the "TIU UNAUTHORIZED ABBREVIATION" File (#8927.9). "CLASS" (#.02) field defaults to LOCAL, "ABBREVIATION EXACT MATCH" (#.03) field defaults to YES, and "STATUS" (#.04) field defaults to ACTIVE when staff enter a new abbreviation. Local sites can only edit the ABBREVIATION EXACT MATCH and the STATUS fields when the CLASS field is set to LOCAL. Sites cannot edit an entry when the CLASS field is set to NATIONAL.
TIU ABBV LIST	List Unauthorized Abbreviations	Produces a printed copy of all unauthorized abbreviations, active only or active with inactive.
TIU DOWNTIME BOOKMARK PN	Contingency Downtime Bookmark Progress Notes	Menu option to set up notes to alert clinicians of computer downtime during defined time periods so that clinicians can check patients' paper records, if necessary.

Legal Requirements

Patient Confidentiality

TIU works with patient records and documents. All users are reminded to be aware of the confidentiality of these records.

Electronic Signature

TIU uses a combination of menu access, User Classes, and Electronic Signature codes to maintain security and responsibility. Individuals in the system who have authority to approve actions, at whatever level, have an **electronic signature code**. Like the access and verify codes used when gaining access to the system, the electronic signature code is not visible on the screen. These codes are also encrypted so that they are unreadable to other users, even when viewed in the user file by those with the highest levels of access. Electronic signature codes are required by TIU for every action that currently requires a signature on paper.

How to Change Your Electronic Signature Code

1. Select User's Toolbox from the Mailman Menu.
2. Select Edit Electronic Signature Code from the User's Toolbox menu.

```
Select Option: User's Toolbox
  Display User Characteristics
  Edit Electronic Signature code
  Edit User Characteristics Menu Templates ...
  Spooler Menu ...
  TaskMan User
  User Help

Select User's Toolbox Option: Edit Electronic Signature code
This option is designed to permit you to enter or change your Initials,
Signature Block Information and Office Phone number. In addition, you are
permitted to enter a new Electronic Signature Code or to change an existing
code.
```

3. Enter your initials.
4. At the "Signature Block Printed Name:" prompt, enter your name as you want it printed on forms that require your signature.

NOTE: If the SIGNATURE BLOCK PRINTED NAME and SIGNATURE BLOCK TITLE fields are disabled at your site, contact your supervisor to request entry of your name and title.

5. At the "Signature Block Title: prompt," enter your job title as you want it printed on forms that require your signature.
6. Enter your office phone number.

Enter your signature code.

Electronic Signature, cont'd

INITIAL: JG SIGNATURE BLOCK PRINTED NAME: FIVE TIUPROVIDER SIGNATURE BLOCK TITLE: Clinical Coordinator OFFICE PHONE: (101)555-5736 Enter your Signature Code: xxxxxxx
--

Cosignature

Cosignature requirements are determined at local levels. Sites or departments can set Cosignature requirements for certain kinds of documents through the *Document Parameter Edit* option on the TIU Parameters Menu. Individual clinicians can designate a default cosigner on their Personal Preferences option.

Links and Relationships with Other Packages

TIU is closely linked to other applications and utilities — Authorization/Subscription Utility (ASU) List Manager utility, the Computerized Patient Record System (CPRS), Visit Tracking, etc. This linkage should remain transparent to users, but the IRM Service and Clinical Coordinators will need to coordinate the components.

Instructions will be provided (with a TIU patch) for setting up the interface with CPRS.

See the User and Technical Manuals of the above-listed packages for further instructions about interfaces.

Chapter 10: Menus and Option Assignment

TIU menus and options are not exported on a single menu, but as individual menus intended for categories of users. These are described in earlier sections of this manual and also here. Sites may rearrange these as needed. Recommended assignments are also listed on the following pages. We've also included an example of a potential Clinical Coordinator Menu.

TIU Conversion Clean-up Menu [GMRP TIU]

This menu comes with Patch GMRP*2.5*44 which is distributed prior to TIU to help clean up the Generic Progress Notes File (#121) and the Generic Progress Notes Title File (121.2). It also contains options to assist in populating the TIU Document Definition File (8925.1), which is roughly equivalent to file #121.2.

This menu is NOT exported on any existing menu. It should be assigned to the person responsible for getting the Progress Notes package ready for conversion to TIU. We suggest that this be limited to one person per site or several people working closely together on these clean-up exercises.

```
1 Calculate Number of PNs per TITLE
2 Number of Notes per TITLE - Report
3 DELETE a Progress Notes TITLE
4 MOVE Notes to Another TITLE
5 Edit TITLE - Enter/Edit Doc Class
6 TITLES Sorted by Document Class - Report
7 CONVERT TITLES (#121.2) to TIU (#8925.1)
PRT Title of Progress Note
UN List Unsigned Progress Notes by AUTHOR
DEL Delete a Signed Progress Note
```

Suggested Clinical Coordinator Menu

TIU doesn't export a Clinical Coordinator Menu. However, sites may wish to create one which includes most of the other menus and options, except possibly IRM options requiring programmer access.

```

Menu Assignment

We recommend assigning menus as follows:

Option Name	Menu Text	Description	Assign to:
TIU MAIN MENU TRANSCRIPTION	Text Integration Utilities (Transcriptionist)	Main Text Integration Utilities menu for transcriptionists.	Transcriptionists
TIU MAIN MENU MRT	Text Integration Utilities (MRT)	Main Text Integration Utilities menu for Medical Records Technicians.	Medical Records Technicians
TIU MAIN MENU MGR	Text Integration Utilities (MIS Manager)	Main Text Integration Utilities menu for MIS Managers.	MIS Managers.
TIU MAIN MENU CLINICIAN	Progress Notes(s)/ Discharge Summary [TIU]	Main Text Integration Utilities menu for Clinicians.	Clinicians
TIU MAIN MENU REMOTE USER	Text Integration Utilities (Remote User)	This option allows remote users (e.g., VBA RO personnel) to access only those documents that have been completed, to facilitate processing of claims on a need-to-know basis.	VBA RO personnel, etc.
TIU PRINT PN USER MENU	Progress Notes Print Options	Menu for printing Progress Notes.	ADPACs, managers
TIU MAS PRINT PN MENU	MAS Options to Print Progress Notes	Menu of options for printing Progress Notes for specific locations, individually or by batch	MAS ADPACs & supervisors
TIUF DOCUMENT DEFINITION	Document Definitions	Document Definition (Clinician) Document Definition (Manager)	Clinicians Clinical Coordinator, IRM staff
TIU IRM MAINTENANCE MENU	IRM Maintenance Menu	This option allows IRM staff to set/modify the various parameters controlling the behavior of TIU, as well as the definition of TIU documents.	IRM, maybe Clinical Coordinators (or some of the options on the menu)
GMRP TIU	TIU Conversion Clean-up Menu	A menu of options for getting the Progress Notes package ready for conversion to TIU	ADPACs, IRM, or Clinical Coordinators. Limit to few.

Chapter 11: Setting up TIU Parameters

TIU Parameters Menu

This menu contains options for Clinical Coordinators or IRM Application Specialists to set up the basic parameters (including Upload parameters) for TIU.

Menu Text	Option Name	Description
Basic TIU Parameters	TIU BASIC PARAMETER EDIT	This option allows you to enter the basic or general parameters which govern the behavior of the Text Integration Utilities
Modify Upload Parameters	TIU DOCUMENT PARAMETER EDIT	This option allows the definition and modification of parameters for the batch upload of documents into VistA.
Document Parameter Edit	TIU UPLOAD PARAMETER EDIT	This option allows you to enter the parameters that apply to specific documents (i.e., Titles), or groups of documents (i.e., Classes, or Document Classes).
Division - Progress Notes Print Params	TIU PRINT PN DIV PARAM	These parameters are used by the [TIU PRINT PN BATCH INTERACTIVE] and [TIU PRINT PN BATCH SCHEDULED] options. If the site desires a header other than what is returned by \$\$\$SITE^ VASITE the .02 field of the 1st entry in this file will be used. For example, Waco-Temple-Marlin can have the institution of their progress notes as "CENTRAL TEXAS HCF."
Progress Notes Batch Print Locations	TIU PRINT PN LOC PARAMS	Option for entering hospital locations used for [TIU PRINT PN OUTPT LOC] and [TIU PRINT PN WARD] options. If locations are not entered in this file they will not be selectable from these options.

NOTE:

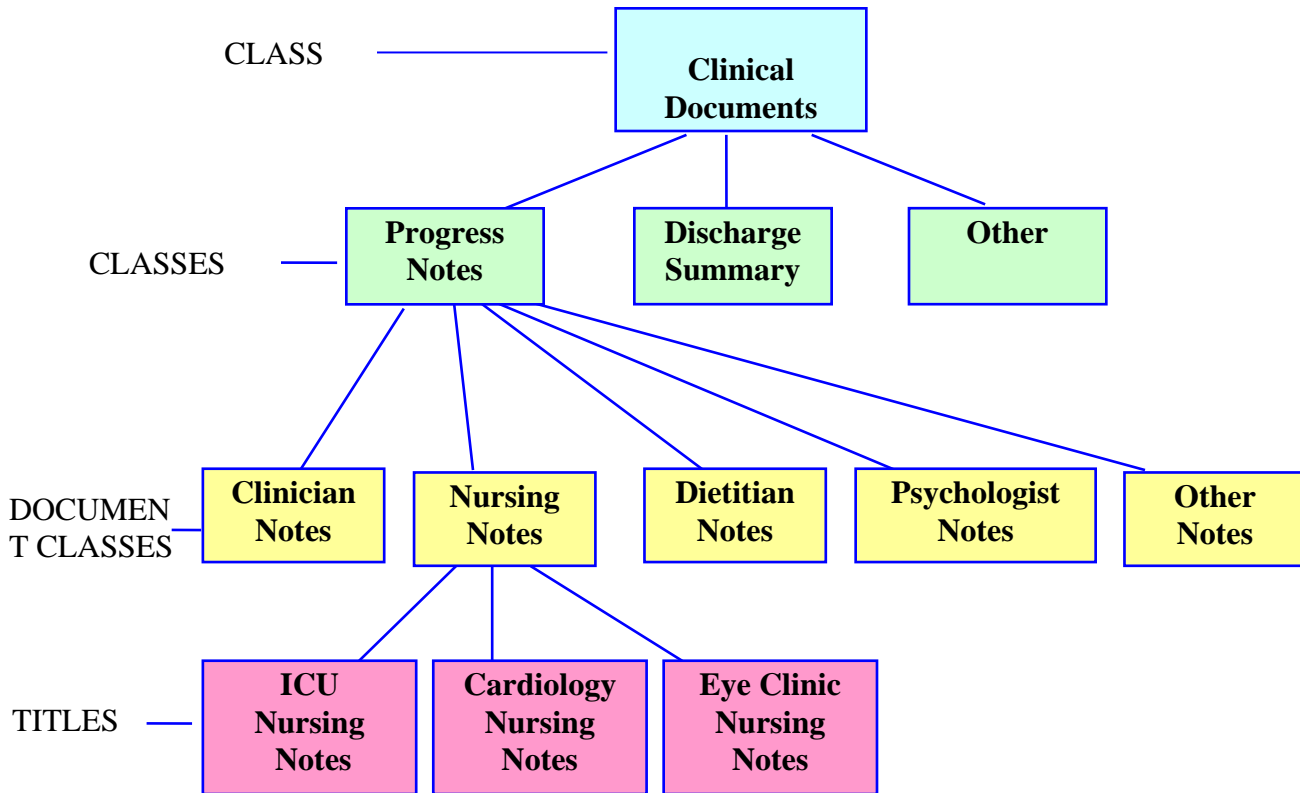

The *TIU Implementation Guide* and *TIU Technical Manual* contain instructions and examples for using these options.

Chapter 12: Document Definitions

TIU uses a document storage database called the Document Definition hierarchy. This hierarchy provides the building blocks for Text Integration Utilities (TIU). It allows documents (Titles) to inherit characteristics of the higher levels, Class and Document Class, such as signature requirements and print characteristics. This structure, while complex to set up, creates the capability for better integration, shared use of boilerplate text, components, and objects, and a more manageable organization of documents. End users (clinical, administrative, and MIS staff) need not be aware of the hierarchy. They work at the Title level with the actual documents.

Plan the Document Definition Hierarchy your site or service will use before installation of TIU and conversion of progress notes. This step is critical to the organization of existing and future documents in each site's implementation of TIU. A worksheet is provided in Appendix A of the *TIU Implementation Guide* to help build the three basic levels.

Example of Document Definition Hierarchy

Document Definition Options

Option Text	Option Name	Description
Edit Document Definitions	TIUFH EDIT DDEFS	This option allows you to view and edit entries. Entries are presented in hierarchy order. Items of an entry are in sequence order, or if they have no sequence, in alphabetic order by menu text, and are indented below the entry. Since Objects don't belong to the hierarchy, they can't be viewed/edited using the Edit Options.
Create Document Definitions	TIUFC CREATE DDEFS	This option allows you to create new entries of any type (Class, Document Class, Title, Component) except Object, placing them where they belong in the hierarchy. Although entries can be created using the Edit and Sort options, the Create option streamlines the process. This option presents entries in hierarchy order, traversing ONE line of descent, starting with Clinical Documents at the top. The Create option permits you to view, edit, and create entries, but only from within the current line of descent. The Create Option doesn't let you copy an entry.
Sort Document Definitions	TIUFA SORT DDEFS	This option allows you to view parts of the hierarchy by selected sort criteria. It displays the selected entries in alphabetic order by Name, rather than in hierarchy order. Depending on sort criteria, entries can include Objects. The Sort option allows you to view and edit entries.
Create Objects	TIUFJ CREATE OBJECTS MGR	This option allows you to create new objects or edit existing objects. First you select Start With and Go To values, and the existing Objects within those values are displayed in alphabetical order.
View Objects	TIUFJ VIEW OBJECTS MGR	This option allows you to look at or edit existing objects. First you select Start With and Go To values, and the existing Objects within those values are displayed in alphabetical order.

NOTE:

For further information about using the Document Definition system, see the *TIU/ASU Implementation Guide* or the *TIU Technical Manual*.

Chapter 13: Defining User Classes

The Authorization/Subscription Utility (ASU), which is distributed with TIU, provides a mechanism for sites to associate users with User Classes, allowing them to specify the level of authorization needed to sign or order specific document types and orderables. It also allows privileges to be inherited, through its use of a hierarchical structure. A set of Business Rules (which can be modified or added to by sites) further strengthens the Utility's ability to define roles and responsibilities for clinical documents.

See the *ASU Clinical Coordinator Manual* or the *TIU/ASU Implementation Guide* for more information about ASU, its relationship to TIU, and its implementation.

User Class Management Menu

Option	Option Name	Description
User Class Definition	USR CLASS DEFINITION	This option allows review, addition, editing, and removal of User Classes.
List Membership by User	USR LIST MEMBERSHIP BY USER	This option allows review, addition, editing, and removal of individual members to and from User Classes.
List Membership by Class	USR LIST MEMBERSHIP BY CLASS	This option allows review, addition, editing, and removal of individual members to and from User Classes.
Edit Business Rules	USR EDIT BUSINESS RULES	This option allows the user to enter Business Rules authorizing specific users or groups of users to perform specified actions on documents in particular statuses (e.g., an UNSIGNED PROGRESS NOTE may be EDITED by a PROVIDER who is also the EXPECTED SIGNER of the note, etc.).
Manage Business Rules	USR BUSINESS RULE MANAGEMENT	This option allows you to list the Business rules defined by ASU, and to add, edit, or delete them, as appropriate.

Chapter 14: National Document Titles

Certain entries in the Document Definition file have been exported either with TIU and/or with various TIU patches. The operation of certain functions in VistA and CPRS depends on these entries being there. These entries include certain classes, document classes, and titles. Most exported Document Definitions are marked “National.” Local editing of National Document Definitions is severely restricted.

Note: **You must limit your editing of national Documents Definitions to actions permitted by the exported Document Definition options. Other editing will cause certain functions of VistA and CPRS to not work properly.**

National Classes

Classes are the most fundamental unit of organization in the Document Definition file.

CLINICAL DOCUMENTS is the root class for all other classes and document classes.

PROGRESS NOTES contains note titles that appear on the Notes tab of CPRS.

DISCHARGE SUMMARY contains note titles that appear on the D/C Summ (Discharge Summary) tab of CPRS.

LR LABORATORY REPORTS was released with patch TIU*1*137 in support of Anatomic Pathology. You should not add any local document classes to this class.

CLINICAL PROCEDURES was released with patch TIU*1*109.

SURGICAL REPORTS was released with patch TIU*1*112 and is not used until the surgery patch SR*3*100 is installed.

National Document Classes

Four of the national document classes are in support of CWAD (CRISIS NOTE, CLINICAL WARNING, ADVERSE REACTION/ALLERGY, ADVANCE DIRECTIVE). If these are changed, then CWAD will not function properly. The same is true for other document classes such as ADDENDUM, DISCHARGE SUMMARIES, and ASI-ADDICTION SEVERITY INDEX. The last of these contains notes pushed from the Psychiatry Package.

For the LR ANATOMIC PATHOLOGY document class, nine (9) business rules were exported by patch **USR*1*23**, the companion patch to **TIU*1*137**. These rules help to ensure that the Anatomic Pathology features of the Lab Package function properly. All access to the titles in this document class (creating, editing, signing, cosigning, and printing) except viewing takes place through the Lab Package. Local sites must not circumvent the rules by adding, modifying, or overriding the business rules. (A list of the exported business rules is in the TIU/ASU Implementation Guide, Exported Business Rules section.)

Note:

The TIU class, document class, user class, note titles, and business rules installed by patch TIU*1*137 and USR*1*23 must not be modified in any way or the Anatomic Pathology enhancements to the Lab Package will not work properly. An exception exists in the case of USR*1*31, which directed medical centers to change these rules to refer to CHIEF, MIS or CHIEF, HIM rather than the LR ANATOMIC PATHOLOGY EMPTY CLASS. The VA Office of Inspector General (OIG) determined that these rules are not in harmony with VHA Handbook 1907.1. See the section USR*1*31 Impact on Business Rules in the TIU Implementation Guide for details.

For document class PATIENT RECORD FLAG CAT I, a business rule was exported by patch **USR*1*24**, the companion patch to **TIU*1*165**, that limits the writing of notes in this document class to a select group. This select group is made up of members of the user class **DGPF PATIENT RECORD FLAGS MGR**. Circumventing this rule violates the intent of keeping the flag documentation process in the hands of qualified domain experts.

Patch TIU*1*171 installed document titles and objects to support Spinal Cord Injury. It also creates the Document Class **SCI OUTCOMES**. The objects are listed on the TIU Web Page at <http://vista.med.va.gov/tiu/html/objects.html>.

HISTORICAL PROCEDURES contains medicine procedures that were converted to TIU notes by **TIU*1*182** in support of the Medicine Package Conversion patch **MD*1*5**. This document class must be left with status **INACTIVE**.

The complete list of national document classes is:

ADDENDUM
ADDICTION SEVERITY INDEX
ADVANCE DIRECTIVE
ADVERSE REACTION/ALLERGY
C & P EXAMINATION REPORTS
CLINICAL WARNING
CRISIS NOTE
DISCHARGE SUMMARIES
HISTORICAL PROCEDURES
LR ANATOMIC PATHOLOGY
PATIENT RECORD FLAG CAT I
PATIENT RECORD FLAG CAT II
OPERATION REPORTS
NURSE INTEROPERATIVE REPORTS
ANESTHESIA REPORTS
PROCEDURE REPORT (NON-O.R.)
SCI OUTCOMES

Note: Although **CONSULTS** was not exported as “National,” the same cautions apply. If you make explicit changes to **CONSULTS**, then the **Consults** tab of CPRS may not work properly.

TIU*1*169 supports patch DVBA*2.7*53 C & P WORKSHEET MODULE PHASE. These patches together allow users to create C & P Examination documents and store them in TIU. The advantage to this is that providers are allowed to view the C & P exams in CPRS along with the rest of a patient’s medical record. C & P documents are entered through the C & P Worksheet Module using a title in the C & P EXAMINATION REPORTS Document Class. Upon signing, the C & P Exams are retained in AMIE and stored in TIU.

Further information on this can be found in the *AMIE Regional Office User Manual*.

National Titles

ADDENDUM
ADVANCE DIRECTIVE
ADVERSE REACTION/ALLERGY
ANESTHESIA REPORT
ASI-ADDICTION SEVERITY INDEX
CLINICAL WARNING
DISCLOSURE OF ADVERSE EVENT NOTE
COMPUTER DOWNTIME

CRISIS NOTE
 DISCHARGE SUMMARY
 HISTORICAL CARDIAC CATHETERIZATION PROCEDURE
 HISTORICAL ECHOCARDIOGRAM PROCEDURE
 HISTORICAL ELECTROCARDIOGRAM PROCEDURE
 HISTORICAL ELECTROPHYSIOLOGY PROCEDURE
 HISTORICAL ENDOSCOPIC PROCEDURE
 HISTORICAL EXERCISE TOLERANCE TEST PROCEDURE
 HISTORICAL HEMATOLOGY PROCEDURE
 HISTORICAL HOLTER PROCEDURE
 HISTORICAL PACEMAKER IMPLANTATION PROCEDURE
 HISTORICAL PRE/POST SURGERY RISK NOTE
 HISTORICAL PULMONARY FUNCTION TEST PROCEDURE
 HISTORICAL RHEUMATOLOGY PROCEDURE
 LR AUTOPSY REPORT
 LR CYTOPATHOLOGY REPORT
 LR ELECTRON MICROSCOPY REPORT
 LR SURGICAL PATHOLOGY REPORT
 NURSE INTERPRETATIVE REPORT
 OPERATION REPORTS
 PATIENT RECORD FLAG CATEGORY I
 PATIENT RECORD FLAG CATEGORY I - HIGH RISK FOR SUICIDE
 PATIENT RECORD FLAG CATEGORY I – URGENT ADDRESS AS FEMALE
 PATIENT RECORD FLAG CATEGORY I – MISSING PATIENT
 RISK OF CJD
 SCI CRAIG HANDICAP ASSESSMENT&REPORTING TECHNIQUE-SHORT FORM
 SCI DIENER SATISFACTION WITH LIFE SCALE
 SCI GENERAL NOTE
 SCI FUNCTIONAL INDEPENDENCE MEASURE
 WRIISC ASSESSMENT NOTE
 PROCEDURE REPORT

Note: The **HISTORICAL** titles in document class **HISTORICAL PROCEDURES** were created by patch **TIU*1*182** with status **INACTIVE**. The status of these titles **MUST REMAIN inactive** in order to prevent users from entering notes on these titles. All notes on these titles are auto-generated by the Medicine Conversion patch **MD*1*5**.

Note: The **TIU** document classes, user class, category I note title, and category I business rule installed by patches **TIU*1*165** and **USR*1*24** must not be modified in any way or Patient Record Flags may not work properly.

**Note:**

PATIENT RECORD FLAG CATEGORY I - HIGH RISK FOR SUICIDE was created for the High Risk Mental Health Patient – Reminder and Flag. This new title is used with the new High Risk for Suicide PRF

**Note:**

PATIENT RECORD FLAG CATEGORY I – URGENT ADDRESS AS FEMALE was created for the High Risk Mental Health Patient – Reminder and Flag Increment 6. This new title is used with the new URGENT ADDRESS AS FEMALE Suicide PRF, mandated by the Undersecretary of Health’s legal solution.

**Note:**

PATIENT RECORD FLAG CATEGORY I – MISSING PATIENT was created for missing and wandering patients. This new title is used with the Missing Patient, PRF.

Patch TIU*1*159 implements the War-Related Illness and Injury Study Centers (WRIISC pronounced “risk”) note title and template. The associated note title is WRIISC ASSESSMENT NOTE. This note is described in the memo *Description of WRIISC Programs and Associated Referral Process* accompanying the patch. To get it to work properly a Clinical Coordinator authorized to edit shared templates must perform the following steps from the CPRS GUI:

9. Go to the Notes tab.
10. From the Options menu, select Edit Shared Templates.
11. In the Shared Templates pane highlight document Titles.
12. From the Tools menu select Import Template.
13. Select WRIISCASSESSMENT.TXML and press Open.
14. Highlight the WRIISC ASSESSMENT template.
15. In the Associated Title list box, select WRIISC ASSESSMENT NOTE.
16. Press OK.

Once these steps have been performed, the template and note title will work for all CPRS users. Further information about setting up shared templates is available in the *Computerized Patient Record System (CPRS) User Guide* in the section on Creating Personal Document Templates.

Patch TIU*1*261 permits an authorized user to rescind an Advance Directive document by changing the title to RESCINDED ADVANCE DIRECTIVE.

Patch TIU*1*261 supports Imaging patch MAG*3.0*121, which provides the ability to watermark images "RESCINDED".

Note: EXACT TITLE NAMES are REQUIRED

The title of the Advance Directive to be rescinded must be ADVANCE DIRECTIVE
The title it is changed to when it is being rescinded must be RESCINDED ADVANCE
DIRECTIVE

Both LOCAL and National Standard titles must be as above. Variations on either title
will cause the Change Title action to fail to watermark images as rescinded.

These exact titles are required by policy. See the VHA HANDBOOK 1004.02 section
on Advance Directives:

http://vaww1.va.gov/vhapublications/ViewPublication.asp?pub_ID=2042

Chapter 15: TIU Alert Tools

Starting with patch TIU*1*158, there is a new option in the TIU Management Menu that allows refresh and manipulation of TIU alerts, especially with respect to signatures. These tools are designed to assist CACs, and other users with TIU management responsibilities, to help control the backlog of unsigned notes. It accomplishes this by providing flexible control over alert generation.

The following actions are available:

BROWSE DOCUMENT—If authorized, presents a read only view of a selected document.

CHANGE VIEW—Allows entry new search criteria.

COMBINATION ALERTS—Allows the sending of new alerts for single or multiple documents to the expected signers (AUTHOR/DICTATOR, EXPECTED COSIGNER/ATTENDING PHYSICIAN, and ADDITIONAL SIGNER(S)) and one or more third parties. RESEND rules outlined below apply for a document's expected signers.

DELETE ALERTS—Allows deletion of all the alerts for a single or multiple documents.

DETAILED DISPLAY—If authorized, allows the viewing of document details.

EDIT DOCUMENT—If authorized, allows the editing a selected TIU document.

IDENTIFY SIGNERS—If authorized, allows the editing of the expected signers of a TIU document and removal of additional signers.

RESEND ALERTS—Allows the regeneration of alerts for a single document or multiple documents; all alerts associated with each document are deleted before being resent. Previously sent 3rd Party Alerts would be deleted and need to be resent. Alerts are sent appropriate to the document's status and only to expected signers as follows:

The Author/Dictator & Expected Co-signer/Attending—only receive alerts if they have not signed.

Additional Signer(s)—will only receive alerts if the document has been signed.

THIRD PARTY ALERTS—Allows the sending of new alerts for a single document or multiple documents to one or more third parties regardless of the document's status.

Business rules are checked and adhered to, so while anyone who has access to this option can use it, you may be blocked from certain functions such as viewing unsigned notes.

In the following example, TUI Alert Tools are accessed through the TIU Maintenance Menu [TIU IRM MAINTENANCE MENU], a year of notes are checked for Dr. Snow, then alerts are resent for an unsigned note:

```
Select TIU Maintenance Menu Option: ?

1      TIU Parameters Menu ...
2      Document Definitions (Manager) ...
3      User Class Management ...
4      TIU Template Mgmt Functions ...

Alert Tools FAQ

- Q. My search results by an ADDITIONAL SIGNER and UNSIGNED documents aren't showing any matches but I know they exist. What's wrong?
- A. Additional signers are usually added AFTER a document has been signed or co-signed. Add UNCOSIGNED and COMPLETED documents to your search criteria.
- Q. I want to regenerate alerts for an UNCOSIGNED document, but I don't want the AUTHOR to get alerted. Should I just send a 3rd Party Alert to the EXPECTED COSIGNER?
- A. You could, but if you select RESEND ALERTS, the regenerated alerts are context sensitive and sent only to individuals that have NOT signed the document; in this case, only the EXPECTED COSIGNER and any ADDITIONAL SIGNERS that have not signed will be alerted.
- Q. I selected RESEND ALERTS and my 3rd Party Alerts disappeared! What happened?

A. A document's alerts are deleted before being regenerated so that they remain accurate regarding the document's status; 3rd Party Alerts are deleted as well and must be resent since they are not officially part of the document's record and cannot be automatically regenerated.

Q. I changed the ADDITIONAL SIGNER for a document using IDENTIFY SIGNERS, but it didn't update in the display. Why not?

A. Because there can be more than one ADDITIONAL SIGNER, unless the ADDITIONAL SIGNER matches the search criteria, it won't be displayed.

Q. I added an ADDITIONAL SIGNER for a document using IDENTIFY SIGNERS, but it didn't update in the display. Why not?

A. Because there can be more than one ADDITIONAL SIGNER, unless the ADDITIONAL SIGNER matches the search criteria, it won't be displayed.

Q. The AUTHOR of several documents (requiring co-signature) is gone and I want to regenerate the alerts for the EXPECTED COSIGNER so they can SIGN and COSIGN these UNSIGNED documents. Should I use RESEND?

A. It depends. Default alert behavior would be to send the alert AFTER the author has signed and in this case, the EXPECTED COSIGNER would have never received the alerts initially or even after using RESEND.

However, with TIU*1*151, a new document parameter was added that could be set so that the EXPECTED COSIGNER could receive the alert IMMEDIATELY; even if the AUTHOR has not signed.

This parameter is shown below:

```
-----  
SEND COSIGNATURE ALERT: After Author has SIGNED// ?  
Specify when the alert for cosignature should be sent  
Choose from:  
0      After Author has SIGNED  
1      Immediately  
-----
```

If you have NOT specifically set this parameter or have it set to "After Author has SIGNED", you'll need to use a 3rd Party Alert to the EXPECTED COSIGNER or change the parameter's setting to "Immediately" before using RESEND.

If you HAVE set this parameter to "Immediately", you can use RESEND.

Q. I used RESEND ALERT and the EXPECTED COSIGNER didn't get alerted! Why?

A. Two possible reasons. The first, please see the question just before this one.

The second, the EXPECTED COSIGNER may be inactivated or DIUSER'd. Currently, kernel does not alert these individuals who are inactive or terminated.

TIU*1.0*158 will inform the user that an individual entered as a 3rd Party Alert recipient is inactive/DIUSER'd. However, it does not verify every individual attached to a document since this would be too system intensive and time consuming on a batch send of alerts.

Q. I used RESEND ALERT and no alerts were resent to anyone, even though it appeared that alerts were being re-generated. Why?

A. While TIU may create and attempt to regenerate the alerts (this will always happen if TIU Alerts attempts to fulfill a user's request), it has no way of actually confirming whether or not kernel will send an alert to an individual associated with a document (See #7).

The important rule to remember is that kernel will not actually send alerts to inactivated or terminated users.

Additionally, TIU sends alerts based on the current status of the document and whether or not the recipient still needs to sign the document. If an individual has already signed, they should not receive an alert. However, if a user associated with a document has already signed and they are sent a 3RD PARTY ALERT, they will receive another alert.

Q. I sent the AUTHOR (who has already signed) a 3RD PARTY ALERT and now they can't process it! What should I do?

Just RESEND ALERTs for that document. All alerts will be deleted and regenerated; 3RD PARTY ALERTS that had been manually generated will have to be re-entered (See #3).

Chapter 16: HL7 Generic Interface

The purpose of the HL7 Generic Interface is to create a Health Level Seven (HL7) line to Text Integration Utilities (TIU) that will support the upload of a wide-range of textual documents from Commercial-Off-the-Shelf (COTS) applications in use now and in the future at Veteran Administration (VA) Medical Centers. Projects that may work with the interface are the Remote Order Entry System (ROES) software used by the Denver Distribution Center (DDC), the Precision Data Solutions Transcription Service software, and the VA Home Telehealth software.

The project creates a single COTS/application interface specification to allow textual documents to be uploaded and displayed in CPRS. This allows clinicians to view information from the COTS package without leaving the patient's electronic medical record.

Generic HL7 will not work with external software unless it is specifically set up to do so. The details of how to do this are contained in the *Text Integration Utilities (TIU) Generic HL7 Handbook*. This handbook describes the HL7 fields required for each document types and gives additional information on system features and vendor guidelines. To retrieve this document go to the VistA Document Library at (<http://www.va.gov/vdl/>), then click on CPRS: Text Integration Utility (TIU).

Message Manager

The only place where the Generic HL7 Interface is visible is in the TIU Maintenance Menu. The TIUHL7 Message Manager has been added to this menu to assist medical center in setting up the interface.

If an error message is returned, it will be contained in clear text explaining the error.

The following is an example of using the HL7 message Manager to check an error message:

```
Select TIU Maintenance Menu Option: ?
1      TIU Parameters Menu ...
2      Document Definitions (Manager) ...
3      User Class Management ...
4      TIU Template Mgmt Functions ...
5      TIU Alert Tools
6      Active Title Cleanup Report
7      TIUHL7 Message Manager
8      Title Mapping Utilities ...
9      Text Event Edit
10     Unauthorized Abbreviations (Enter/Edit)
11     List Unauthorized Abbreviations
13     Contingency Downtime Bookmark Progress Notes

Select TIU Maintenance Menu Option: 7  TIUHL7 Message Manager

Searching for messages.....

Refresh Message List
```

Chapter 17: Setting Up TIU Text Events

Patch TIU*1*296 modifies the TIU application to send a TIU alert to the appropriate service provider(s) immediately after a staff member screens a patient and signs the associated note. The service provider(s) will be alerted prior to the note being co-signed by the licensed clinician responsible for reviewing and approving the note. Prior to this modification, TIU alerts were not sent to all service providers. This resulted in missed opportunities to provide needed services for patients while the patients are on site, and forced staff to take time to contact patients and reschedule needed services.

A new Text Event Edit [TIU TEXT EVENT EDIT] option is available in the TIU Maintenance menu.

```
Select OPTION NAME: TIU MAINTENANCE MENU  TIU IRM MAINTENANCE MENU  TIU
Maintenance Menu

1      TIU Parameters Menu ...
2      Document Definitions (Manager) ...
3      User Class Management ...
4      TIU Template Mgmt Functions ...
5      TIU Alert Tools
6      Active Title Cleanup Report
7      TIUHL7 Message Manager
8      Title Mapping Utilities ...
9      Text Event Edit
10     Unauthorized Abbreviations (Enter/Edit)
11     List Unauthorized Abbreviations
13     Contingency Downtime Bookmark Progress Notes
```

Select the **Text Event Edit** menu option to set up a “text event” in the TIU TEXT EVENTS file (#8925.71). Complete all fields, including the trigger text to be searched for in a TIU document (progress note, consult note, etc.). If the trigger text is found in the TIU document, then an alert is sent to the team(s) specified in the file.

The following example shows “ab color blindness” as the trigger text [TEXT TO SEARCH]. The alert message [ALERT MESSAGE] *patient has ab color blindness* will be sent to the specified service provider [CPRS TEAM]. An alert [SIGNER ALERT MESSAGE] is also sent to the individual who signed the note.

```
Select TIU Maintenance Menu <TEST ACCOUNT> Option: txt  Text Event Edit

Select TIU TEXT EVENTS NAME: test 5
Are you adding 'test 5' as a new TIU TEXT EVENTS (the 8TH)? No// yes  (Yes)
NAME: test 5//
STATUS: ?
Enter a 0 for inactive or a 1 for active
Choose from:
0      INACTIVE
1      ACTIVE
STATUS: 1 ACTIVE
TEXT TO SEARCH: ?
Answer must be 3-200 characters in length.
TEXT TO SEARCH: ab color blindness
CASE SENSITIVE: ?
Enter a 0 for NO or a 1 for YES.
Choose from:
0      NO
```

```

1          YES
CASE SENSITIVE: no NO
INCLUDE SPACES: yes YES
ALERT MESSAGE: patient has ab color blindness
SIGNER ALERT MESSAGE: ?
    Answer must be 1-6 characters in length.
SIGNER ALERT MESSAGE: ab
Select CPRS TEAM: team test
Select CPRS TEAM: TEST TEAM ??
Select CPRS TEAM: TEAM TEST
    ...OK? Yes// YES (Yes)

    CPRS TEAM: TEAM TEST//
Select CPRS TEAM:

Select TIU TEXT EVENTS NAME:

```

Note: Any TIU document that is to be used to trigger these alerts must have the MUMPS code 'D TASK^TIUTIUS(DA)' entered in the POST-SIGNATURE CODE field (#4.9) in the TIU DOCUMENT DEFINITION file (#8925.1). This field can only be edited by IRM personnel.

```

Select OPTION: ENTER OR EDIT FILE ENTRIES

INPUT TO WHAT FILE: TIU DOCUMENT DEFINITION//
EDIT WHICH FIELD: ALL// 4.9 POST-SIGNATURE CODE
THEN EDIT FIELD:

Select TIU DOCUMENT DEFINITION NAME:    NURSING PROGRESS NOTE    TITLE
Std Title: NURSING NOTE
POST-SIGNATURE CODE: D TASK^TIUTIUS(DA)//

```

Note: TIU*1*297 modified the [TIU TEXT EVENT EDIT] option to allow users who don't have the at-sign (@)-Programmer access to add/update/delete entries to the TIU TEXT EVENTS (#8925.71) file.

Chapter 18: Unauthorized Abbreviations

A newly created "TIU UNAUTHORIZED ABBREVIATION" File (#8927.9) contains a standard set of fourteen unauthorized abbreviations from The Joint Commission. Staff may add additional abbreviation(s) to match any unapproved abbreviations they have identified in local policy.

The use of this functionality is optional. Work with your Health Information Management (HIM), the facility Chief, and Chief of Staff to determine whether this functionality should be turned on by setting STATUS to ACTIVE for each individual unauthorized abbreviation.

A newly created menu option, "Unauthorized Abbreviations (Enter/Edit)" [TIU ABBV ENTER EDIT], maintains unauthorized abbreviation data in the "TIU UNAUTHORIZED ABBREVIATION" File (#8927.9).

Another newly created menu option, "List Unauthorized Abbreviations" [TIU ABBV LIST], lists all the abbreviations in file (#8927.9). These two new options are located under the existing "TIU Maintenance Menu" [TIU IRM MAINTENANCE MENU].

The application is deployed with STATUS field set to "Inactive." It is turned on by updating at least one abbreviation to a status of "Active." If the STATUS of an unauthorized abbreviation is set to ACTIVE in the "TIU Unauthorized Abbreviation" File (#8927.9), any use of the abbreviation in a CPRS progress NOTE will be listed in the "CPRS - Insufficient Authorization" box. The note cannot be signed unless the CPRS Note Editor removes or spells out each unauthorized abbreviation that is listed in the "CPRS Insufficient Authorization" box.

Requirements for the "Unauthorized Abbreviations (Enter/Edit)" option are:

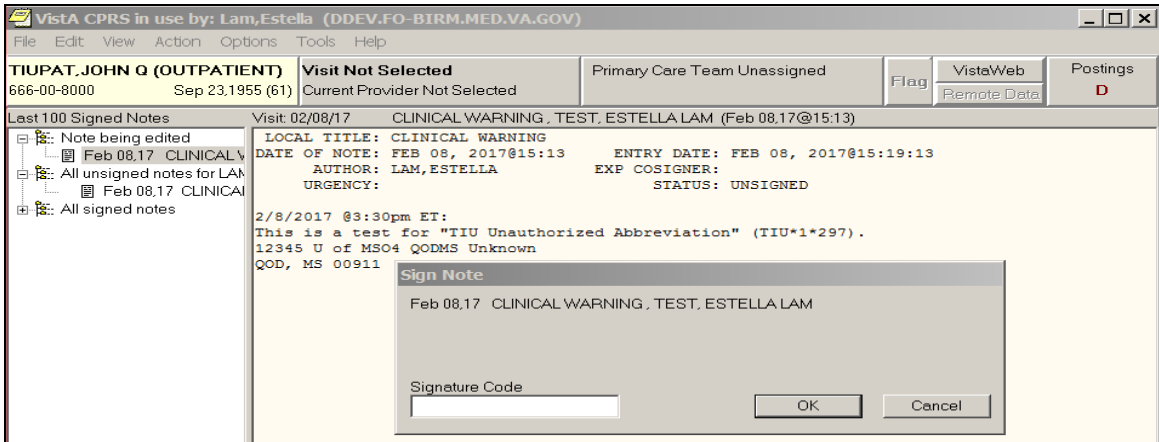

- 1) Fourteen unauthorized abbreviations from The Joint Commission are released with "CLASS" (#.02) field set to LOCAL and "STATUS" (#.04) field set to INACTIVE in the "TIU UNAUTHORIZED ABBREVIATION" File (#8927.9). These are: "IU, MgSO4, MS, MSO4, QD, Q.D., qd, q.d., QOD, Q.O.D., qod, q.o.d., U, u."
- 2) NATIONAL unauthorized abbreviation(s) cannot be added or modified locally. No entries with a CLASS (#02) field set to NATIONAL were released with patch TIU*1.0*297.
- 3) No unauthorized abbreviation entry can be deleted once it is created.
- 4) The name of the unauthorized abbreviation in field (#.01) cannot be changed or deleted once it is created, but STATUS (#.04) field can be changed to either ACTIVE or INACTIVE.
- 5) The name of unauthorized abbreviations in field (#.01) cannot include the following punctuations: |^&~\:; , ! ?
- 6) The name of unauthorized abbreviations in field (#.01) is not case sensitive.
- 7) The requirement for case sensitivity check for an unauthorized abbreviation name is determined by the "ABBREVIATION EXACT MATCH" (#.03) field.

- 8) When a new unauthorized abbreviation is created, the ABBREVIATION EXACT MATCH field (#.03) defaults to "YES." Local staff can change the value in this field.
- 9) The CLASS (#.02), ABBREVIATION EXACT MATCH (#.03), STATUS (#.04), and NOTE (#.05) fields are audited using FileMan.
- 10) Local staff cannot change any NATIONAL unauthorized abbreviation. However, they can add/modify/activate/inactivate any LOCAL unauthorized abbreviation in field (#.03) and field (#.05).
- 11) The NOTE (#.05) field in the LOCAL Unauthorized Abbreviation option can be edited locally regardless of STATUS (#.04) field.
- 12) The LOCAL Unauthorized Abbreviation option can be managed by local staff to serve any general medical and business practice need. Local staff can inactivate any local abbreviation in STATUS (#.04) field when an unauthorized abbreviation is no longer needed.

CPRS – Progress Note / Sign Note Now

Since this patch is released with STATUS Field in the TIU UNAUTHORIZED ABBREVIATION File (#8927.9) set to Inactive, any use of an unauthorized abbreviation in a CPRS progress NOTE will not be listed when the Progress Note editor clicks “Sign Note Now,” unless the STATUS of the abbreviation is set to ACTIVE.

Example of no unauthorized abbreviation being noted at CPRS / Sign Note Now:

Example of activating the STATUS field for abbreviation “QOD”:

```
Select OPTION NAME: TIU MAINTENANCE MENU  TIU IRM MAINTENANCE MENU  TIU
Maintenance Menu
  10  Unauthorized Abbreviations (Enter/Edit)
  11  List Unauthorized Abbreviations
Select TIU Maintenance Menu <TEST ACCOUNT> Option: 10  Unauthorized
Abbreviations (Enter/Edit)

Enter/Edit Unauthorized Abbreviation(s)
=====

Enter Unauthorized Abbreviation: QOD

The abbreviation QOD already exists.

1) Q.O.D. : EXACT-MATCH=YES STATUS=INACTIVE CLASS=LOCAL
```

```

2) QOD      : EXACT-MATCH=YES   STATUS=INACTIVE   CLASS=LOCAL
3) q.o.d.   : EXACT-MATCH=YES   STATUS=INACTIVE   CLASS=LOCAL
4) qod      : EXACT-MATCH=YES   STATUS=INACTIVE   CLASS=LOCAL

For EDIT Unauthorized Abbreviation, Select number: (1-4): 2
Unauthorized Abbreviation: QOD
ABBREVIATION EXACT MATCH: YES//
STATUS: INACTIVE// AC ACTIVE
NOTE:

STATUS for this Unauthorized Abbreviation 'QOD' is ACTIVE now.

Enter <RETURN> to continue or '^' to exit: ^

```

Example of checking the Audit Log after activating STATUS for abbreviation “QOD”:

```

Select OPTION: 5 INQUIRE TO FILE ENTRIES
OUTPUT FROM WHAT FILE: TIU UNAUTHORIZED ABBREVIATION//

Select TIU UNAUTHORIZED ABBREVIATION: QOD LOCAL YES ACTIVE
STANDARD CAPTIONED OUTPUT? Yes// (Yes)
Include COMPUTED fields: (N/Y/R/B): NO// - No record number (IEN), no Computed
Fields
DISPLAY AUDIT TRAIL? No// YES

UNAUTHORIZED ABBREVIATION: QOD CLASS: LOCAL
ABBREVIATION EXACT MATCH: YES
STATUS: ACTIVE
Changed from "INACTIVE" on Feb 09, 2017@13:27:39 by User #11992
(TIU ABBV ENTER EDIT Option)

```

Example of STATUS change of “QOD” to active in the Unauthorized Abbreviations File (#8927.9):

ABBREVIATION	CLASS	ABBV	Exact Match	STATUS
IU	LOCAL		YES	INACTIVE
MS	LOCAL		YES	INACTIVE
MSO4	LOCAL		YES	INACTIVE
MgSO4	LOCAL		YES	INACTIVE
Q.D.	LOCAL		YES	INACTIVE
Q.O.D.	LOCAL		YES	INACTIVE
QD	LOCAL		YES	INACTIVE
QOD	LOCAL		YES	ACTIVE
U	LOCAL		YES	INACTIVE
q.d.	LOCAL		YES	INACTIVE
q.o.d.	LOCAL		YES	INACTIVE
qd	LOCAL		YES	INACTIVE
qod	LOCAL		YES	INACTIVE
u	LOCAL		YES	INACTIVE

Chapter 19: Setting up Contingency Downtime Bookmark Progress Notes

The Contingency Downtime Bookmark Progress Notes option in the TIU Maintenance Menu allows sites to add a progress note to the electronic record of all inpatients and outpatients who were seen during computer system downtime. The progress note states that a computer outage occurred, and alerts medical staff to search the patient's paper records for non-electronic documentation created during the outage.

To set up a contingency downtime bookmark progress note:

1. Select the Contingency Downtime Bookmark Progress Notes [TIU DOWNTIME BOOKMARK PN] option from the TIU Maintenance Menu [TIU IRM MAINTENANCE MENU]. The "Bookmark Progress Note after a Downtime" screen displays.

```
Bookmark Progress Note after a Downtime

This is the utility to add a bookmark to the progress note of
each patient's electronic record after a Vista downtime.

You will be asked a few questions, and then the utility
will place the note on the patient's record.

Select the PROGRESS NOTE TITLE to be used for filing contingency downtime
bookmark progress notes. The selected title must be mapped to the
VHA ENTERPRISE STANDARD TITLE of COMPUTER DOWNTIME.

Select TIU DOCUMENT DEFINITION NAME://
```

2. Enter a TIU DOCUMENT DEFINITION NAME. This must be a locally-approved title that is mapped to the enterprise-standard COMPUTER DOWNTIME title.
3. Enter "S" or "U" to define whether the downtime was Scheduled or Unscheduled.

```
Was the downtime (S)cheduled or (U)nscheduled? UNSCHEDULED

What was the starting time of the outage? T-2@2200 (NOV 07, 2017@22:00)

What was the ending time of the outage? T-2@23:47 (NOV 07, 2017@23:47)
Who will be the AUTHOR of the note? TIUSER,ONE// OT DEVELOP
ER

What shall the Date/Time of the Note be? NOW// T-2@23:54 (NOV 07, 2017@23:54)

Select one of the following:

A All Outpatient Clinics
S Selected Outpatient Clinics
N No Outpatient Clinics

In addition to Inpatients,
File Notes for Outpatient Clinics? [A/S/N]: All Clinics
In addition to yourself, who shall receive email notification
of this event?
Select NEW PERSON NAME: EPIP,USER UE 118 ADMIN ASSISTANT
```

Select another NEW PERSON NAME:

4. Enter the starting time of the outage. For example, enter "T@[24-hour time]" to set the date as today. Type "?" and then press Enter to see all valid time formats.
5. Enter the ending time of the outage.
6. Enter the Author of the note (using "lastname,firstname" format). The default entry is the logged-in user.
7. Enter the Date/Time of the note; the default is NOW. This entry determines where the note appears in a sorted list of all progress notes.
8. Specify whether All (A), Selected (S), or No (N) outpatient clinics were affected by the outage. Choosing "Selected" opens the HOSPITAL LOCATION file. Enter the desired clinics to include. Press Enter at the prompt to continue to the next step.
9. At the "Select NEW PERSON NAME:" prompt, enter the name (in "lastname,firstname" format) of any other user(s) that you wish to receive a notification of the downtime event. To enter multiple names, press Enter after each entry. The notification will list the patients who have had this downtime bookmark progress note appended to their record.
10. At multi-divisional sites, the "Select division: ALL/" prompt appears. Enter the division(s) affected by the outage. You can use MEDICAL CENTER DIVISION NUM, NAME, FACILITY NUMBER, or TREATING SPECIALTY to designate the division. Type "?" to display a numbered list of available divisions.

Select DIVISION(s) to use when the task selects inpatients to file notes...
Select division: ALL//

11. The system creates a progress note containing standard text and generates a preview of the note. Enter "Yes" at the "Do you wish to edit the text?" prompt if you wish to edit the progress note text. A text editor will open, from which you can edit the note text. Press CTRL+E to exit the text editor. The "Do you wish to edit the text?" prompt displays again; enter "No" to continue.

 **NOTE:** The use of this functionality is optional; therefore, the boilerplate text will not initially be stored in the document definition until the first use of the option to implement the functionality. After the first use, the boilerplate text will be stored and can be edited via the usual TIU document definition edit options.

```
Date/Time of Note: Nov 07, 2017@23:54
Creating TIU note text, you will have an opportunity to edit the text
The progress note will be generated with the following text:

----- Potential Interruption in Electronic Medical Record Keeping -----
An unscheduled interruption in access to the electronic medical records
```

occurred for 1 hour and 47 minutes between:
Tuesday, Nov 07, 2017 22:00 and Tuesday, Nov 07, 2017 23:47

Before, during and after this period of downtime, medical record documentation may have been collected on paper. Documents such as progress notes, orders, results, medication administration records (MAR) and procedure reports may have been collected, but may not be reflected in the electronic record or they may be scanned into the record at a later date.

Do you wish to edit the text? No//

12. The downtime note will be signed as an Administrative Closure, so the Administrative Closure signature block is displayed. At the "Enter your Current Signature Code" prompt, enter your code to sign and close the note. If you do not enter the signature within 60 seconds, you must restart entry of the note.

The note(s) will have the following administrative closure (not a signature):

Administrative Closure: 4/11/16
by: TIUSER, ONE, Developer
Developer

You will now be asked for an electronic signature to begin this process. This is a security measure to start the background task, but it is not used to sign the notes themselves. If you are not the AUTHOR, your name will show for the administrative closure, but not as the author of the note.

You have 60 seconds/try and a maximum of 3 attempts to enter a proper code.

Enter your Current Signature Code: SIGNATURE VERIFIED

13. At the "Queue the report to Taskman?" prompt, enter "No" to view the report on your screen now or enter "Yes" to send the report to Taskman to view later (the default is "Yes"). The report lists the patients impacted by the downtime, grouped by inpatients, discharged patients, and outpatient clinics, and indicates whether the downtime progress note was successfully appended to each patient's record. Regardless of your response, an email message containing the patient list and progress note status is sent to the recipients designated in step 9.

 **NOTE:** You might want to queue the report since the generation of a large report can tie up your computer for a long period of time.

14. To view the Contingency Downtime Bookmark Progress Notes, look at the Progress Notes in a patient's record in VistA or the CPRS GUI.

 **NOTE:** Only one progress note will be filed for any patient with multiple appointments (whether inpatient, outpatient, or both) at different clinics during the outage period.

Chapter 20: Helpful Hints/Troubleshooting

FAQs (Frequently Asked Questions)

+ NOTE: *Most of these questions were received from TIU/ASU test sites. Thanks to everyone who contributed!*

Q: We just entered all of our Providers into the Person Class file (when the Ambulatory Care Reporting Project came out). Do we have to do this all over again for the User Class file in ASU? Why can't TIU and ASU just use the Person Class?

A: The Provider Class in ASU fulfills a different function, and therefore its database design is a different kind of hierarchy.

A patch to ASU in the near future will help assure that your efforts in populating the Person Class Membership at your site are not lost, or repeated. We are developing a mapping between a subset of the exported User Classes and the Person Class File (i.e., for each Person Class, there will be a corresponding User Class), which will help you “autopopulate” User Class Membership, assure that future changes to an individual’s Person Class Membership are reflected automatically in his User Class Membership, and allow resolution of privileges for inter-facility access to data. We recommend that you initially implement TIU and ASU by populating only the most essential User Classes (i.e., Provider; MRT; Chief, MIS; and Transcriptionist), and use the forthcoming patch to assist you in autopopulating more specific User Classes when you have become acquainted with the two products.

Q: We’ve heard that implementation of TIU is *very* complex and time-consuming. How long *does* it take?

A: TIU implementation *is* complex, but the amount of time it takes to implement has to do with the complexity of the site, how many users, the database and hierarchy size, the level of users, and how dependent the site is on the package (obviously a site that is totally electronic has very different issues than a site where participation is optional. It took a test site with a million+ notes about 2.5 weeks to run their Progress Notes conversion.

FAQs cont'd

Q: Will the Discharge Summary and Progress Notes packages be gone once files are converted to TIU?

A: Discharge Summary V. 1.0 and Progress Notes V. 2.5 should be made "Out of Order" once the conversions have been run, staff trained, and the cut-over started. The data in files 121 and 128 will remain until your site decides to purge these files. We suggest that they remain intact until you're sure the conversions have run correctly and the implementation is going smoothly.

Q: Can TIU be used without converting the Discharge Summaries until much later?

A: TIU *can* be used without converting Discharge Summary, but we strongly recommend that Progress Notes and Discharge Summary both be converted to TIU at the same time, to avoid complications.

+ **NOTE:** You cannot run dual implementations of Discharge Summary; that is, Discharge Summary 1.0 and Discharge Summary through TIU.

Q: Is it possible to load ASU in production and start populating the groups before we load TIU?

A: Yes you can. The Business Rules will not be functional because they are tied to the Document Definition File, but you will be able to populate the Class memberships.

Q: Do we have to delete or sign unsigned notes before we can convert them?

A: No, you don't have to delete or sign the unsigned notes. The conversion will move them as is. However, you probably don't want to be moving old, irrelevant notes from one package to the other. By the way, notes for test patients are NOT moved; they are ignored.

FAQs cont'd

Q: Can we require a Cosignature for a particular note?

A: Yes, you can set Cosignature requirements for document classes or titles. Use the option *Document Parameter Edit*, as described in the *TIU Implementation Guide*. Individual clinicians can designate an expected Cosigner through their *Personal Preferences* option (described on page 64 of this manual).

Q Why do we have to enter Visits and encounter data for Progress Notes? What are “Historical Visits”?

A: Visit data is now required for every outpatient encounter. The vast majority of Progress Notes are already linked to an admission and don't require additional visit information to be added.

A historical visit or encounter is a visit that occurred at some time in the past or at some other location (possibly non-VA). Although these are not used for workload credit, they can be used for setting up the PCE reminder maintenance system, or for other non-workload-related reasons.

NOTE: If month or day aren't known, historical encounters will appear on encounter screens or reports with zeroes for the missing dates; for example, 01/00/95 or 00/00/94.

Q: Are there any terminal settings that we need to be aware of for TIU? On the VT400 setting in Smart Term, the bottom half of the Create Document Definitions screen was not scrolling properly. It was writing over previous lines and got very confusing!

A: Various terminal emulators can affect applications using the List Manager interface. The VT220 and 320 work very well with List Manager.

FAQs cont'd

Q: I have gotten my 600 clinic and ward locations set up, but when I try to print by ward I am only allowed to print to a printer. This is not true under the Print by Hospital Location, where I can print to the screen. What is the difference?

A: Print by Ward is designed to support batch printing. It has the unique ability to determine when the last note was printed so that sites can now capture the infamous “orphan” note which was a problem under Progress Notes 2.5. You might consider adding a message on entry into the option to inform users that they can only print to a printer (not on screen).

Q: Can we share business rules with other sites.

A: It isn't yet known how appropriate or desirable it is to share business rules amongst sites. The package is exported with all the business rules needed to run the standard package. The differences are usually on a medical center basis.

For example, one site wants all users to be able to see all UNSIGNED notes. ON the flip side, another site doesn't want any users to be able to print or view UNCOSIGNED notes until the cosigner has signed. Two very different views. Just because you are in the same VISN doesn't mean you would view these issues in the same light. Another example is the hospital that wants to restrict the entering/viewing/ printing of every Progress Note by TITLE. You can do this, but it is not something we would recommend.

We strongly recommend that you work with the exported business rules for a while before making any changes.

Q: When I read my Discharge Summaries after they come back from the transcriptionist, there are dashes (or other funny characters) sprinkled throughout; what do these mean and what am I supposed to do?

A: These characters (your site determines whether they will be dashes, hyphens or some other character) indicate words or phrases that the transcriptionist was unable to understand. You need to replace these with the intended word or phrase before you'll be able to sign the document.

FAQs cont'd

Q: What is the best editing/word-processing program and how can I learn how to use it?

A: This is partly a matter of personal preference and partly a matter of what's available at your site. Commercial word-processors are available at some sites. The FileMan line editor and Screen Editor are available at all sites. Of these two, most Discharge Summary users prefer the Screen Editor. Your IRM office or ADPACs can help you get set up with the appropriate editor and provide training. The Clinician Quick Reference Card summarizes the FileMan Screen Editor functions.

Q: Why should a site require "release from transcription"?

A: Release from transcription is required to prevent a discharge summary from becoming visible to other users before the person entering the summary has completed the entry. For example, if a transcriptionist needed to leave the terminal, the summary would not be available for anyone else to look at until the summary is "released from transcription."

Q: Why can't we use extended ASCII characters (e.g., °, ≥, Δ, etc.) in our documents to be uploaded?

A: These alternate character sets are not standardized across operating systems and your MUMPS system may not be set up to store them.

FAQs cont'd

Questions about Reports and Upload

Q: At present we put all discharges in the Discharge Summary package. We do allow Spinal Cord Injury to put “interim” summaries in on their patients every 6 months or annually. These reports stack up under the admission date and are all under that one date upon discharge.

When patients are transferred to the Intensive Care Units, they may have a very long/complicated summary to describe the care while in the unit. This should be an interward transfer note, but some of our physicians feel that due to the complexity of care delivered in the unit, this should be included in their Discharge Summary, BUT should have its own date (episode of care). I realize that the interward transfer note is a progress note and very few of our physicians are using progress notes. Our physicians seem to want to have that interward transfer information in these complex cases attached to the Discharge Summary.

My question is will TIU offer us anything different that will satisfy our physicians? I still do not have a mental picture of what it will look like when I go to look up a DCS or PN from the TIU package. Will the documents be intermingled and arranged by date? I am a firm believer in calling things what they are and putting them where they belong when it comes to organizing our electronic record. I hate to see the DSC and interward transfers go together now in the DCS package as it does create a problem when the patient is actually discharged and Incomplete Record Tracking (IRT) thinks he was discharged when the interim was written. Does anyone have any thoughts and can someone show me how it looks when I get TIU and look up documents on a patient?

A: From: TIU Developer

Interim Summaries may be easily defined in TIU, and linked with the corresponding IRT deficiency. Parameters determining their processing requirements, as well as the format of a header for uploading them in mixed batches with Discharge Summaries, Operative Reports, C&P exams, and Progress Notes can all be defined without modifying any code. A patch will be necessary to link them to a specific transfer movement, and to introduce a chart copy of the appropriate Standard Form. This involves a modest programming effort, but will have to be prioritized along with a number of other requests.

FAQs cont'd

We need the help of the user community to try to sort out the relative priorities of each of these tasks, along with your patience, as we work to deliver as many of them as possible, as timely as possible...

A: From a user/coordinator:

A possible solution to the problem of rotating residents is to set up your summary package with the author not needing to sign the summary. This allows the attending physician to sign the report. While the residents may rotate in and out, the attending usually remains the same through the course of the patients stay.

Q. What are sites doing with C&Ps, & op notes?

It is my understanding that C&Ps are a type of discharge summary.

I've tried creating "C&P EXAM" as a title underneath the "DISCHARGE SUMMARY" document class. I get TYPE errors when uploading test documents. The document parameters are defined for the upload fields.

A: *From a user/coordinator:* OP reports and C&P exams reside in their appropriate packages. You can use the TIU upload utility to put them there.

As for OP notes, we have several titles (i.e. Surgeon's Post-OP note).

Do you have TIU in the APPLICATION GROUP field of the Surgery and C&P file?

Our FILE File has this for our Surgery file:

NUMBER: 130 NAME: SURGERY
APPLICATION GROUP: GMRD
APPLICATION GROUP: TIU

Q: Can we do batch upload of Progress Notes by vendor through TIU?

A: Yes, you may now batch upload Progress Notes through TIU. See instructions earlier in this manual (under Setting Parameters) or in the TIU Technical Manual.

FAQs cont'd

Q: Currently our Radiology reports are uploaded by the vendor. Can this functionality be built into TIU?

A: You may upload Radiology Reports, but it will be necessary to write a LOOKUP METHOD to store several identifying fields in the Radiology Patient File. The remainder are stored in the Radiology Reports File, along with the Impression and Report Text. (The TIU and Radiology development teams will work together on a lookup method, as development priorities allow.)

Q: We have hundreds of entries in files 128.1 and 128.5 to be cleaned up, because many duplicate discharge summaries were mistakenly uploaded by the transcriptionists of our vendor. How can we clean up these files?

A: You can use the *Individual Patient Document* option on the GMRD MAIN MENU MGR menu, along with VA FileMan, to clean up the Discharge Summary files.

Questions about Document Definition (Classes, Document Classes, Titles, Boilerplate text, Objects)

Q: After the initial document definition hierarchy is built and used, can we modify the hierarchy structure if we feel it is incorrectly built? How flexible is this file?

A: Once entries in the hierarchy are in use, you can't move them around. It would be wise to think your hierarchy through before installation. Don't rush the process. If necessary, create new classes, document classes, and titles (the Copy function streamlines creating new titles), and deactivate the old ones. The users won't be aware of the change if the Print Name is the same, but the .01 Name is new.

FAQs cont'd

Q: Who creates titles and boilerplates at a site?

A: Many test sites restrict the creation of titles and boilerplates as much as possible. At one site, users submit a request for a title or boilerplate. IRMS or the clinical coordinator create the boilerplate and/or title and forward it to the Chairman of the Medical Records Committee for approval. Once approved it is made available for use. Titles are name-spaced by service and the use of titles is restricted by user class. With the ability to search by title, keeping the number of titles small and their use specific can be very useful. For example, when patient medication education is documented on an electronic progress note it can be reviewed easily.

Some of the other sites allow the ADPACs to create boilerplates without going through such a formal review process. Another site restricts this function to the Clinical Coordinator. It was designed so that sites can do whatever they are most comfortable with.

Q: The root Class supplied with the package is CLINICAL DOCUMENTS. Can a peer class level be made using our configuration options? Ex: ADMINISTRATIVE DOCUMENTS

A: You cannot enter a class on the same level as Clinical Documents.
In TIU Version 1.0, entries can only be created under Clinical Documents.

Q: I've changed the technical and print names for a Document Class, but it doesn't seem to have changed when I select documents across patients. What am I doing wrong?

A: When you select documents across patients, you are presented with a three-column menu. The entries in this menu are from the Menu Text subfield of the Item Multiple. To make a consistent change, you must update Menu Text as well as Print Name when you change a Document Definition name.

FAQs cont'd

Q: How can I print when I'm in Document Definitions options?

A: All Document Definitions printing is done using the hidden actions Print Screen and Print List. First, locate the data to be printed so that it shows on the screen and then select either the action PS or PL. To locate the appropriate data use the Edit, Sort, or Create option to list appropriate entries.

To print a list, select the PS or PL action at this point. To print information on a single given entry, first locate the entry in one of the above lists, then select either the Detailed Display action or the Edit Items action. Edit View shows all available information for a given entry. Edit Items shows the items of a given entry. Then select PS or PL. Enter PS for Print Screen to print the current display screen. It *only* prints what is currently visible on the screen, ignoring information that can be moved to horizontally or vertically (pages), so you should move left/right and up/down to the desired information before printing.

Enter PL for Print List to print more than one visible screen of information. Print List prints the entire vertical list of entries and information, including entries and information not currently visible but which are displayed when you move up or down. If the action is selected from the leftmost position of the screen, you're asked whether to print ALL columns or only those columns visible on the current leftmost position of the screen. If you select the action after scrolling to the right, only the currently visible left/right columns are printed.

Q: Is it possible for sites to share objects they create locally?

A: As sites develop their own Objects, they can be shared with other sites through a mailbox entitled TIU OBJECTS in SHOP,ALL (reached via FORUM).

☞ **NOTE:** Object routines used from SHOP,ALL are *not* supported by the CIO Field Offices (formerly known as ISCs or IRMFOs). Use at your own risk!

☞ **NOTE:** TIU-Health Summary objects that are exchanged between sites will always import in with "NO OWNER" (field #.05-PERSONAL OWNER in file #8925.1 TIU DOCUMENT DEFINITION). The system software cannot be made to automatically use the importing user's name during the installation process. The TIU-HS objects will work fine in reminder dialogs, but you may find a problem with not being able to VIEW the object in the CPRS GUI Template Editor due to "no owner" being designated after installing. When you try to select an object in the CPRS Template editor, you may get an error message. *See the TIU Technical Manual for instructions on how to assign yourself as an owner.*

Helpful Hints/Troubleshooting, cont'd

Q: Is there any way to change the Title of a Progress Note? For example, if I want to change one of my CWAD notes to a Nursing Psychology note, is that possible?

A: Yes. Use the “hidden” action Change Title.

Q: Is there a way to access progress notes that have been linked to a problem? I can't seem to find how this is done.

A: Assuming that notes are being linked to problems, you can use the *Show Progress Notes Across Patients* option to search for notes by Problem. When prompted to Select SEARCH CATEGORIES:, enter Problem.

```
Select Progress Notes User Menu Option: Show Progress Notes Across
Patients
```

```
Select Status: COMPLETED// ALL undictated untranscribed unreleased
unverified unsigned uncosigned completed, amended purged deleted
Select Progress Notes Type(s): ALL Advance Directive, Adv React/Allergy
Crisis Note Clinical Warning Historical Titles
```

```
Select SEARCH CATEGORIES: AUTHOR// PROB Problem
```

```
Select PROBLEM: ANGINA PECTORIS, UNS
```

```
2 matches found
```

- 1 Angina pectoris, unstable
- 2 Other and unspecified angina pectoris

```
Type “^” to STOP or Select 1-2: 1
```

```
Start Reference Date [Time]: T-2// T-9999 (JAN 20, 1970)
```

```
Ending Reference Date [Time]: NOW// <Enter> (JUN 06,1997@09:00)
```

```
Searching for the documents.
```

Of course, this query has several limitations:

- Only one problem may be selected at a time (i.e., you can't select ANGINA PECTORIS OR AIHD as a search criterion)
- Problems can't be “grouped” or expressed ambiguously (e.g., a search for ANGINA PECTORIS, rather than ANGINA PECTORIS, UNSTABLE, would not have found this record), and
- The only way for this benefit to be exercised at all is for the clinicians at your facility to be actively using Problem List.

Still, if you're interested in a focused search for all notes about a specific problem, and if your facility has committed to the use of the Problem List package, this can be a powerful asset for retrospective research, utilization review, and epidemiological studies. With the Preventive Measures for certain chronic diseases being made part of the Director's performance appraisal, being able to easily pull notes that document what was done for those problems is of HIGH importance.

Facts & Helpful information

Action abbreviations on List Manager screens

The TIU and ASU packages don't use mnemonics (abbreviations or numbers) for actions (protocols) on List Manager screens, partly because it's difficult to make them consistent with other packages and what users expect. Sites, however, can feel free to add whatever their users would like to have (e.g., \$ for Sign).

Shortcuts

At any "Select Action" prompt, you can type the action abbreviation, then the = sign and the entry number (e.g., E=4).

Jump to Document Def in the Edit Document Definition option takes you directly to a document definition (Class, Document Class, or Title) if you know the name.

When reviewing several notes, the up-arrow (^) entry takes you to the next note. To exit from the review, enter two up-arrows (^ ^).

Visit Information

When you enter a Progress Note for an outpatient, this Progress Note now needs to be associated with a "visit." For the majority of Progress Notes, this visit association is done in the background, based on Scheduling or Encounter Form data. If a visit has already been recorded for the date your Progress Note refers to, but the Progress Notes wasn't linked (e.g., for standalone visits such as telephone or walk-in visits), you can select a visit from the choices presented to you during the PN dialogue. If no visit has been recorded, you must create a new visit. See the example below.

NOTE: As of patch TIU*1*269 – Updates for ICD-10, selection from appropriate ICD diagnoses or procedures (ICD-9 or ICD-10) can be made, depending on the Date of Visit. The dialogue confirming the selections will include the ICD coding system as well as the ICD code.

Visit Orientation

Why associate Progress Notes with Visits?

Database design: An event (clinical or otherwise) may be fully described by five key attributes or parameters: Who, what, when, where, and why. Three of these (i.e., who, when, and where), are all encoded in the Visit File entry itself. The remaining two parameters (what, and why), are generally included in the content of the document.

The VHA Operations Manual, M-1, Chapter 5 requires that every ambulatory visit have at least one Progress Note. Deficiencies with respect to this requirement can *only* be identified if Progress Notes are associated with their corresponding Visits.

Inter-facility data transfer requires identification of the Facility from which the data originated. Because the Facility is an attribute of the Visit file entry, it is not necessary to maintain a reference to the facility with every clinical document.

Workload Capture, particularly for telephone and standalone encounters, where the only record of the encounter is frequently a Progress Note, can be easily accommodated, provided that notes are associated with visits.

“Roll-up” of documentation by Care Episode. To allow access to all information pertaining to a given episode of care (e.g., for close-out of a hospitalization), a visit orientation is essential.

Integration with PCE, Ambulatory Care Data Capture, and CIRN. The visit orientation provides a useful associative entity for interfaces with other clinical data repositories that allow query and report generation based on the existence of a variety of coded data elements. For example, a search of PCE to identify all patients with AIHD who were discharged without a prescription for aspirin prophylaxis might identify a cohort of patients for further evaluation. The ability to call for all the cardiology notes entered during the corresponding care episodes could revolutionize retrospective chart review).

Glossary

ASU	Authorization/Subscription Utility, an application that allows sites to associate users with user classes, allowing them to specify the level of authorization needed to sign or order specific document types and orderables. ASU is distributed with TIU in this version; eventually it will probably become independent, to be used by many VistA packages.
Action	A functional process that a clinician or clerk uses in the TIU computer program. For example, “Edit” and “Search” are actions. Protocol is another name for Action.
Boilerplate Text	A pre-defined TIU template that can be filled in for Titles, speeding up the entry process. TIU exports several Titles with boilerplate text which can be modified to meet specific needs; sites can also create their own.
Business Rule	Part of ASU, Business Rules authorize specific users or groups of users to perform specified actions on documents in particular statuses (e.g. an unsigned progress note may be edited by a provider who is also the expected signer of the note).
Class	<p>Part of Document Definitions, Classes group documents. For example, “Progress Notes” is a class with many kinds of progress notes under it.</p> <p>Classes may be subdivided into other Classes or Document Classes. Besides grouping documents, Classes also store behavior which is then inherited by lower level entries.</p>
Clinician	A doctor or other provider in the medical center who is authorized to provide patient care.
Component	Components are “sections” or “pieces” of documents, such as Subjective, Objective, Assessment, and Plan in a SOAP Progress Note. Components may have (sub)Compon-ents as items. They may have Boilerplate Text. Components may be designated as “Shared.”

Glossary, cont'd

CPRS	Computerized Patient Record System. A comprehensive VistA program, which allows clinicians and others to enter and view orders, Progress Notes and Discharge Summaries (through a link with TIU), Problem List, view results, reports (including health summaries), etc.
CWAD	Cautions, Warnings, Adverse Reactions, Directives; a type of Progress Note.
Discharge Summary	Discharge summaries are summaries of a patient's medical care during a single hospitalization, including the pertinent diagnostic and therapeutic tests and procedures as well as the conclusions generated by those tests. They are required for all discharges and transfers from a VA medical center, domiciliary, or nursing home care. The automated Discharge Summary module of TIU provides an efficient and immediate mechanism for clinicians to capture transcribed patient discharge summaries online, where they're available for review, signing, adding addendum, etc.
Document Class	Document Classes are categories that group documents (Titles) with similar characteristics together. For example, Nursing Progress Notes might be a Document Class, with Nursing Dialysis Progress Notes, Nursing psychology Progress Notes, etc. as Titles under it. Or maybe the Document Class would be Psychology Notes, with Psychology Nursing Notes, Psychology Social Worker Notes, Psychology Patient Education Notes, etc. under that Document Class..
Document Definition	Document Definition is a subset of TIU that provides the building blocks for TIU, by organizing the elements of documents into a hierarchy structure. This structure allows documents (Titles) to inherit characteristics (such as signature requirements and print characteristics) of the higher levels, Class and Document Class. It also allows the creation and use of boilerplate text and embedded objects.

Glossary, cont'd

HIMS	Hospital Information Management System, common abbreviation/synonym used at VA site facilities; also known as MIS (see below).
IRT	Incomplete Record Tracking, a package TIU can interface with to transmit incomplete progress notes and discharge summaries.
Interdisciplinary Note	A new feature of Text Integration Utilities (TIU) for expressing notes from different care givers as a single episode of care. They always start with a single note by the initial contact person (e.g., triage nurse, case manager, attending) and continue with separate notes created and signed by other providers, then attached to the original note.
MIS	Common abbreviation/synonym used at VA site facilities for the Medical Information Section of Medical Administration Service. May be called HIMS (Health Information Management Section).
MIS Manager	Manager of the Medical Information Section of Medical Administration Service at the site facility who has ultimate responsibility to see that MRTs complete their duties.
MRT	Medical Record Technician in the Medical Information Section of Medical Administration Service at the site facility who completes the tasks of assuring that all discharge summaries placed in a patient's medical record have been verified for accuracy and completion and that a permanent chart copy has been placed in a patient's medical record for each separate admission to the hospital.

Glossary, cont'd

Object	<p>Objects are a device to extract data from other VistA packages to insert into boilerplate text of progress notes or discharge summaries. This is done by having a placeholder name embedded in the predefined boilerplate text of Titles, such as: "PATIENT AGE." The creator of the Object types the placeholder name into the boilerplate text of a Title, enclosed by ' '. If a Title has the following boilerplate text:</p> <p>"Patient is a healthy PATIENT AGE year old male ..."</p> <p>Then a user who enters such a note for a 56 year old patient would be presented with the text:</p> <p>"Patient is a healthy 56 year old male ..." where the age for this specific patient is pulled from the patient database.</p>
Progress Notes	<p>The Progress Notes module of TIU is used by health care givers to enter and sign online patient progress notes and by transcriptionists to enter notes to be signed by caregivers at a later date. Caregivers may review progress notes online or print progress notes in chart format for filing in the patient's record.</p>
TIU	<p>Text Integration Utilities</p>
Title	<p>Titles are definitions for documents. They store the behavior of the documents which use them.</p>
User Class	<p>User Classes are the basic components of the User Class hierarchy of ASU (Authorization/Subscription Utility) which allows sites to designate who is authorized to do what to documents or other clinical entities.</p>
