**PERSONNEL AND ACCOUNTING
INTEGRATED DATA
(PAID)
INSTALLATION GUIDE**

Version 4.0
August 1995

Hines IRM Field Office
Hines, Illinois

Installation

The Personnel and Accounting Integrated Data (PAID) distribution medium contains a file of routines. All of these routines begin with the PAID namespace PRS. All globals, options and keys created during the initialization process also begin with PRS. All PAID files have file numbers in the 450-459 number range as assigned by the DBA.

PAID V. 4.0 contains a partial definition of the New Person file #200. This partial definition will create a new field (PAID EMPLOYEE #450) which is a pointer to the PAID Employee file #450 and a new MUMPS cross-reference (AJ) on the SSN field #9. These additions to the New Person file have been approved by the DBA and the Kernel developers.

This package minimally requires Kernel V. 7.0 or later and VA FileMan V. 21.0 or later. Kernel V. 8.0 is required to utilize the sign-on alerts portion of PAID 4.0. PAID 4.0 may be installed and used without this functionality. (Note: For those sites running Kernel V. 7.0, an index will show a fatal error until you install Kernel V. 8.0. This will not affect the way the package operates.)

It is not necessary to disable the system during the PAID 4.0 initialization. Initialization should not be done while users of the current version of the PAID package are entering data or transmitting data to the Austin Automation Center. Installation will take approximately 45-60 minutes.

Installation:

For all DHCP PAID V. 3.5 sites, this version must be installed after October 4, 1995 and before October 13, 1995.

1) Disable mapping for any PRS routines. Mapping is not recommended for any PRS routines.

2) Load the new routines into your account.

4) After successful initialization, you may delete all of the PRSIN* routines.

Note: Due to the fact that we are shipping a partial file #200, you may receive errors when running an index. These will not affect the way the package operates.

Security: It is strongly suggested that VA FileMan rarely be used to alter files since security at the VA FileMan level is much less strict. See the National Package Security chapter in the technical manual for further information.

Routine Mapping: None of the routines need to be mapped.

Journaling: Journaling of these PAID globals is recommended:

^PRSPC ^PRST

Disk Space Used: File 450 (PAID EMPLOYEE) uses approximately two thousand bytes per employee. It is in the PRSPC global.

File 458 (TIME & ATTENDANCE RECORDS) uses approximately 900 bytes per employee per pay period. It is in the PRST global.

File 459 (PAID PAYRUN DATA) uses approximately 400 bytes per employee per pay period. It is in the PRST global.

Files 458 and 459 will grow larger and more quickly relative to File 450.
